Short-Term Forecast Discussion

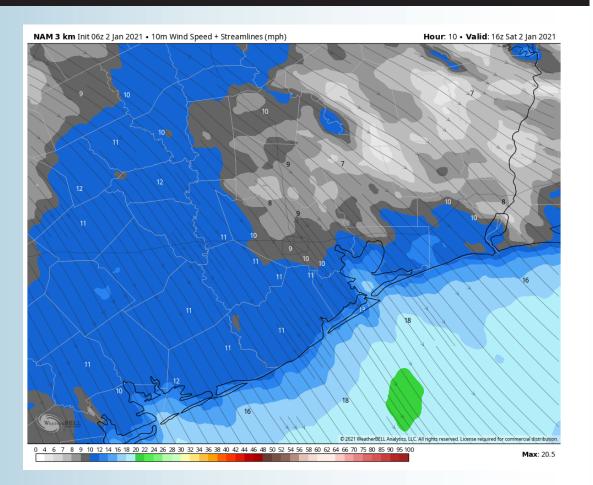

- > Today will be dry day.
- NW winds continue to persist through much of the day sustained around 10 − 15 MPH with gust around 20 mph. Winds after 4 PM begin to weaken as High pressure moves over head. Winds around 10PM will shift out of the S for northern stations and the boarding stations winds will shift around midnight to be out of the SW to 5 MPH or less.
- High temps look to be in the lower to mid 50's F over open waters.
 - No fog potential for today.

Simulated Radar Snapshot (12 PM CT)

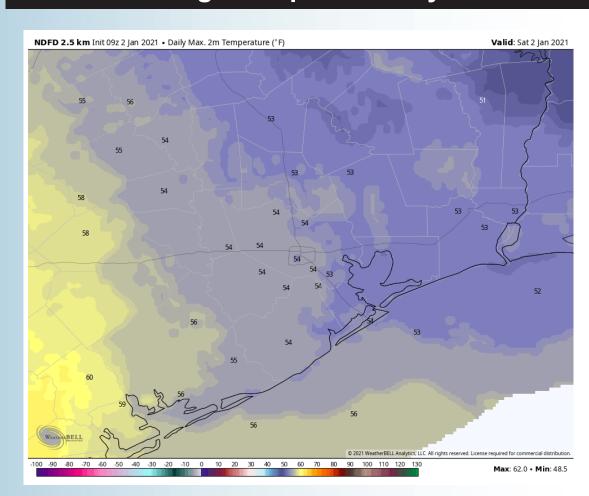

Saturday, January 2nd, 2021

Sustained Winds (10 AM CT)

High Temps Saturday

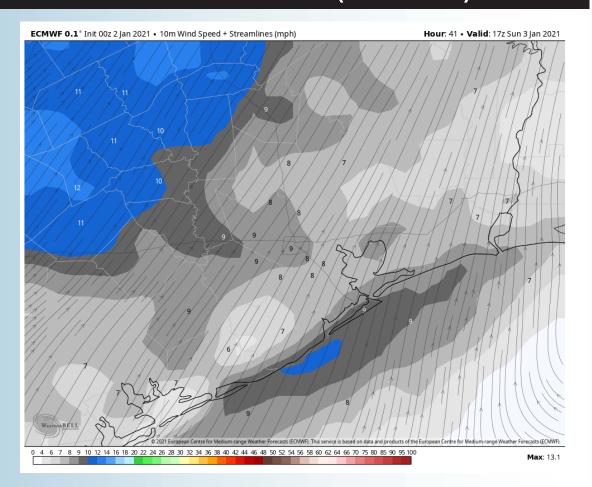

Sunday, January 3rd, 2021

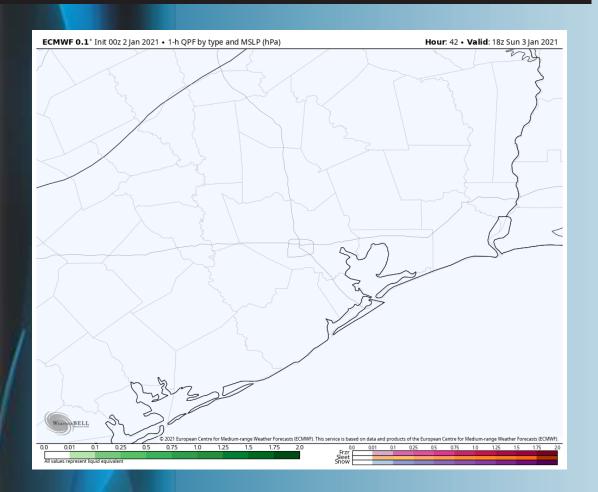

Short-Term Forecast Discussion

- > Yet another dry day expected for Sunday.
- Calm winds in the AM give way to winds sustained around 5 − 10 MPH. Winds generally remain out of the SW/ S throughout the day. Gust around 15 MPH will be possible.
- High Temperatures on Sunday look to be in the lower to mid 60's F over open waters.
- As the aforementioned high pressure moves east into the Gulf late Sat into Sunday, winds will be calm as more of SW flow off the Gulf which could allow for some minor fog potential. The data is still hinting at some fog potential into Sunday morning around 4-9 AM, but generally keep it to the north of the stations. Cant 100% rule out fog quite yet, but at this distance, it is not currently favored.

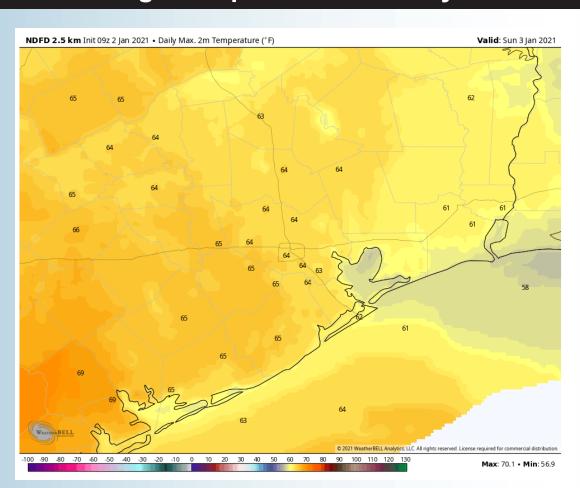

Sustained Winds (11 AM CT)

Simulated Radar Snapshot (12 PM CT)

High Temperatures Sunday

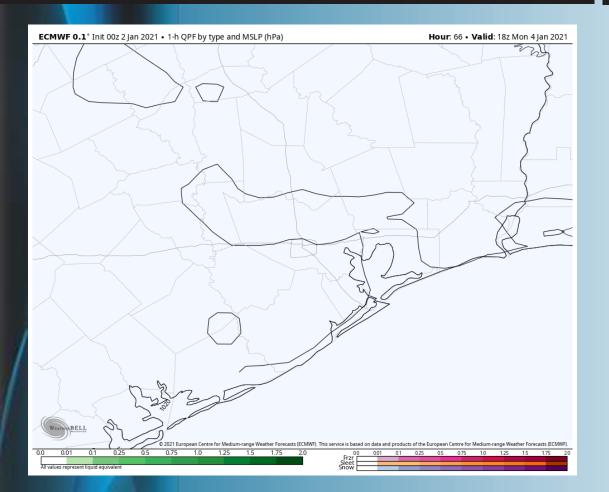

Short-Term Forecast Discussion

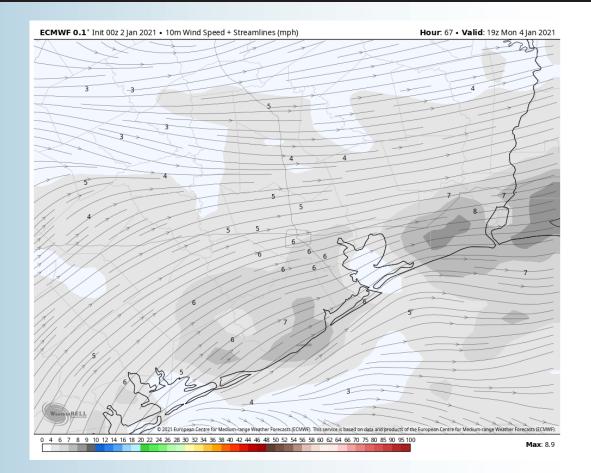

- Monday is also likely to be a dry day.
- Winds will be out of the SW/ W sustained at 5-10 MPH with 15 MPH gusts. In the early evening a high pressure system will pass over head bringing calm winds. After the passage SE winds will be established.
- High temperatures for Monday will be in the upper 60's inland and low 60's for the boarding station.
- As the high pressure system moves through the area the calmer winds presented allow for some fog potential. This potential begins in the evening and will be over the boarding station and open waters as indicated by some models. We will update you further as this develops.

Simulated Radar Snapshot (12 PM CT)

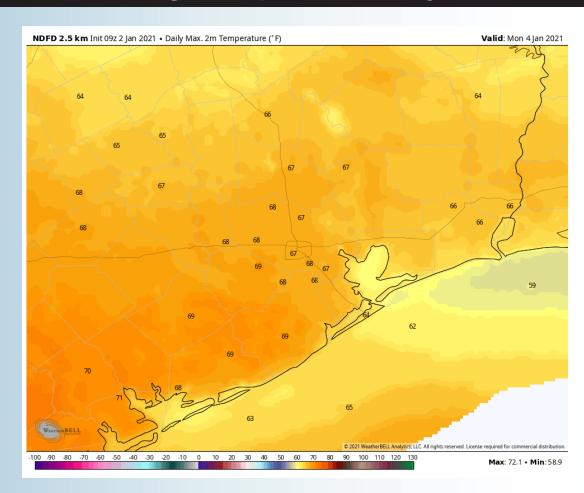

Monday, January 4th, 2021

Sustained Winds (1 PM CT)

High Temps for Monday

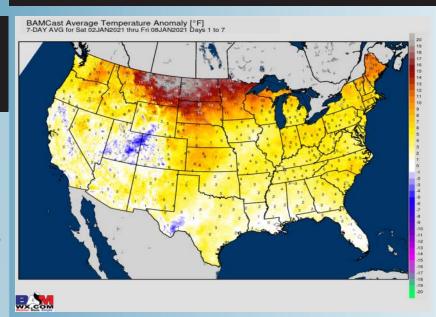

Saturday, January 2, 2021

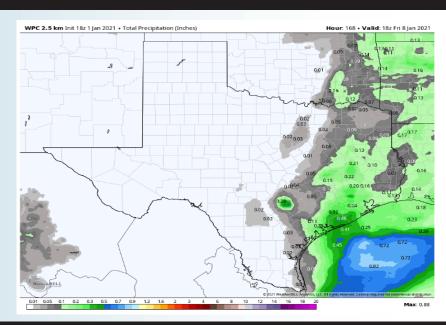

Week 1 Forecast

Long-Range Forecast Discussion

- Above normal temperatures are expected Sunday through Wednesday. Temperatures begin to moderate with a frontal passage mid to late next week. An overall dry pattern is anticipated outside of a shot of moisture late WED into THU.
- Our latest favored week 2 guidance features the Houston area at about normal temps and about "normal" precipitation.

 Periodic shots of precipitation will be possible as these fronts pass the area.
 - Forecast features the Houston area at below normal temperatures and below normal precipitation. Long range guidance continues to favor more of a cooler pattern for the S US heading into the New Year.

Week 2 Forecast

Weeks 3/4 Forecast
