Fog Report

Tuesday, January 26, 2021

VISIBILITY (8 PM CT TUE)

VISIBILITY (2 AM CT WED)

- Early evening guidance's atmospheric profiles and latest observations are favorable for patchy fog in our southern stations later this evening and into the overnight hours before our cold front works through and takes the fog with it.
- We are now siding with potential development of patchy fog from the boarding station to 75/76. Current favoring the 7-8 PM timeframe for development of patchy fog for the boarding station, closer to the ~10-11 PM window for 75/76. The front will then come in from the NW and sweep fog offshore, likely ending any fog at 75/76 around the ~2-3 AM timeframe, and ending near ~ 3-4 AM for the boarding station

Short-Term Forecast Discussion

- An isolated sprinkle/ mist cannot be ruled out for the boarding station out through the evening hours ~6-8 PM window. Elsewhere we are favoring drier weather
- Winds will stay coming from the NE at 8-13 MPH sustained with gusts of 13-18 MPH possible at the boarding station
- Lows tonight likely drop back into the mid to upper 50s
- **Check slide above for more details on fog this evening.**

Sustained Winds (8 PM CT)

Simulated Radar Snapshot (11 PM CT)

Low Temperatures Tonight

Short-Term Forecast Discussion

- A front will work through the area early morning Wednesday ~2-5 AM. This cold front will bring the opportunity for scattered light showers across the area. We favor any precipitation to be rather limited and chances will be eliminated with the passing of the front. Any precip would be less than 0.05”
- As mentioned above, another front will move through and shift winds from NE to NW. Before the front (2 - 5 AM), winds will be 5-10 MPH but sustained wind speeds after the front passes (5-8 AM) will be at least 13-18 MPH with gusts 20-30 MPH possible. Around 6 PM wind speeds will drop to sustained 8-13 MPH.
- High temperatures WED will be in mid to upper 60s across the area
 - Fog is not favored for Wednesday

Sustained Winds (4 AM CT)

Simulated Radar Snapshot (4 AM CT)

High Temperatures Wednesday

Short-Term Forecast Discussion

- Thursday we are favoring quieter weather with no precipitation expected
- Winds for all boarding stations will start the day off coming from the N before shifting more Northeasterly in the 9A – 12P timeframe. Sustained winds of 10-15 MPH with gusts 15-20 MPH look likely for the boarding station, weakening to 8-13 with gusts 13-18 MPH as the winds shift.
- High temps across the area likely sit in the upper 50s for the boarding station, lower 60s closer to the 610 bridge
 - No fog anticipated for Thursday

Sustained Winds (11 AM CT)

Simulated Radar Snapshot (12 PM CT)

High Temperatures Thursday

Week 1 Forecast

Long-Range Forecast Discussion

- Above normal temperatures are expected this week with below normal amounts of moisture.
- This warmer/ drier theme continues into week 2. The culprit is an expanding Southeast US ridge to the south which will help to direct low pressure systems well to the north.
- The overall pattern persist for the weeks 3/4 timeframe as well. Drier and warmer conditions expected.

Week 2 Forecast

Weeks 3/4 Forecast
