Short-Term Forecast Discussion

We continue to expect the dry weather to linger into tonight.

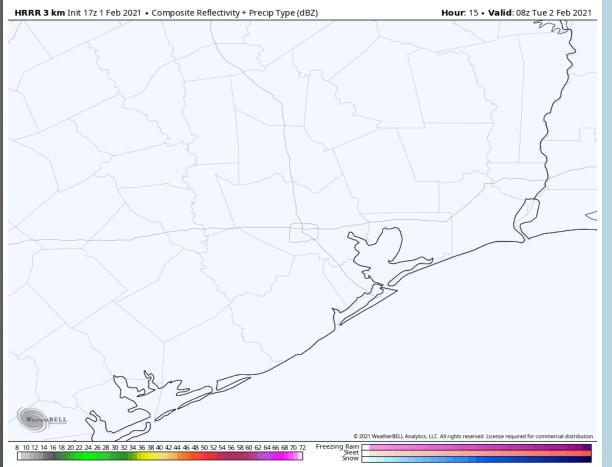

- Winds tonight are expected to veer more out of the Northeast at 8-14 MPH sustained, gusting at times to 15-20 MPH.
- Expected low temperatures tonight look to drop near 50F over the boarding stations, around 40F near Houston.
 - Fog is not anticipated for Tuesday morning.

Sustained Winds (2 AM CT)

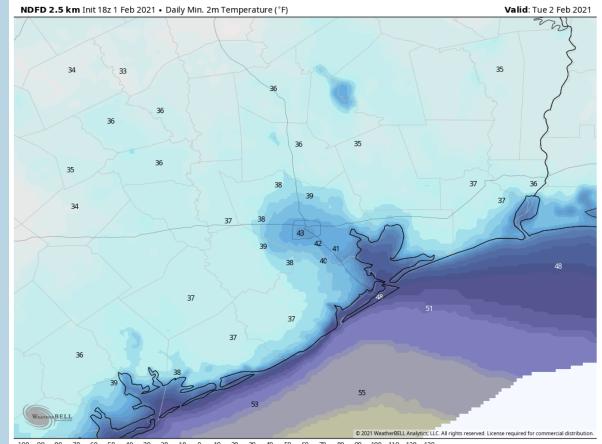

Monday, February 1st, 2021

Simulated Radar Snapshot (2 AM CT)

Low Temperatures Monday Night

Max: 56.9 • Min: 31

Weather. Made. Simple.

Short-Term Forecast Discussion

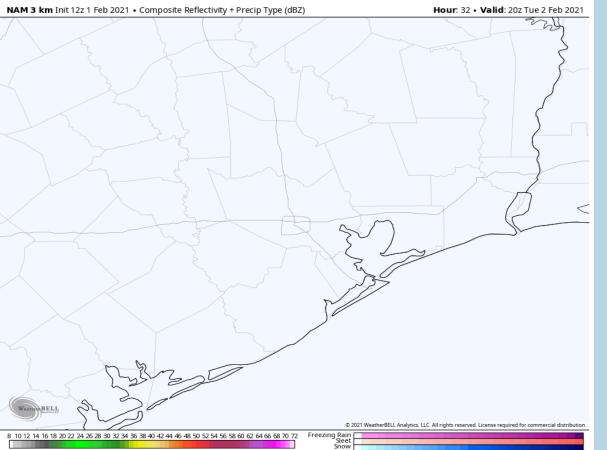

Tuesday looks to stay quiet regarding precipitation.

Winds on Tuesday start shifting from N to more NE, sustained 7-13 MPH near daybreak. Winds will then turn more easterly by mid-day and will become onshore (southeasterly) by the late afternoon hours. Sustained winds of 4-8 MPH and a few gusts 10-15 MPH are expected.

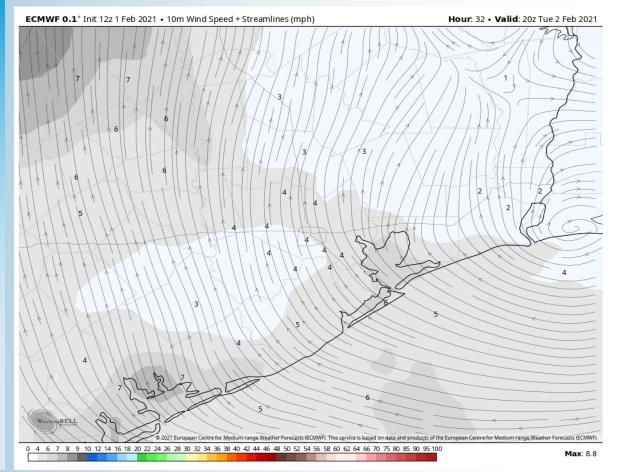

High temperatures again on Tuesday likely reach the upper 50s for the stations, lower 60s inland.

No fog expected Tuesday.

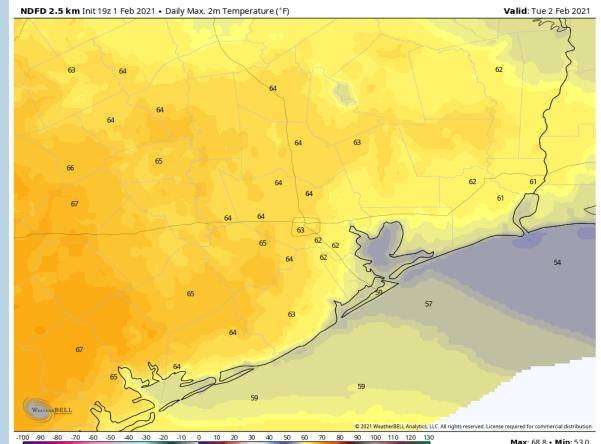

Simulated Radar Snapshot (2 PM CT)

Sustained Winds (2 PM CT)

High Temperatures Tuesday

Wednesday, February 3rd, 2021

Sustained Winds (2 PM CT)

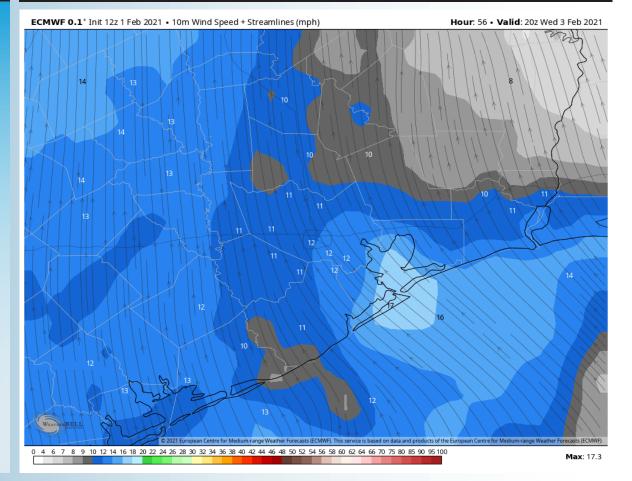

Short-Term Forecast Discussion

The quiet weather looks to continue heading into Wednesday this week.

Winds increase on Wednesday especially late morning out of the Southeast, sustained at 12-17 MPH, gusting at times up to 20-25 MPH.

High temperatures on Wednesday, due to the stronger Southeast winds, reach into the mid-60s across the boarding stations, near 70F more inland.

A couple hi-resolution forecast weather models are trying to hint at some fog potential Wednesday morning near the Houston metro (~3-8 AM CT), but confidence remains low at this time.

Monday, February 1, 2021

Long-Range Forecast Discussion

ather, Made, S

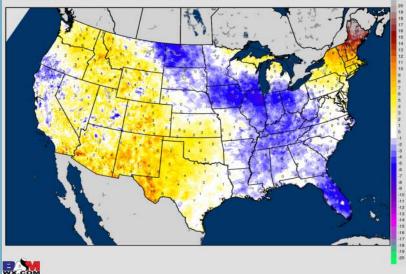

Houston Pilots

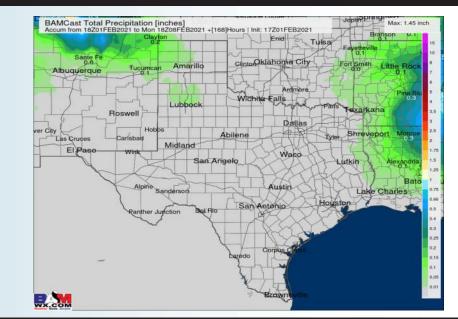

An overall very dry and slightly warmer than normal week are in store for the Houston area. Next best chance for precipitation looks to come Friday with another front that will work through the area.

> Overall we remain slightly warmer here vs normal in week 2, slightly wetter vs previous drier outlooks with a more active jet stream potential over the area.

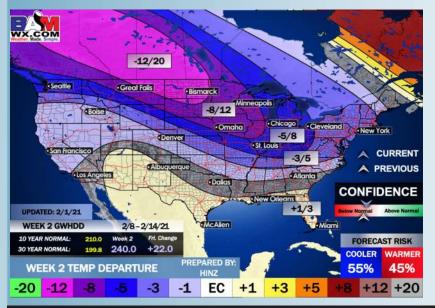

The overall pattern looks to persist for the weeks ³/₄ timeframe as well with temps being slightly warmer than normal with below normal moisture potential.

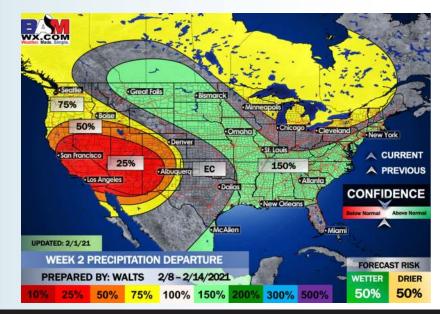

Week 2 Forecast

Weeks 3/4 Forecast
