Short-Term Forecast Discussion

- Today we will watch for yet another low end chance (~10-20%) of some light & isolated showers that look most favorable in the 1PM-7PM window. Aside from this, mostly dry conditions are anticipated.
- The first half of the day looks to see winds 8-13 MPH with gusts 13-18 MPH. Anticipating ~Noon and beyond to have winds of 13-18 MPH and gusts 20-25 MPH coming from the SE at the boarding station. Winds will be the strongest once the sun goes down
- Highs look to be in the upper 60's F/ lower 70's F over open waters. Temperatures around 80 F will be possible further inland.
- *Fog info for today is on the slide below*

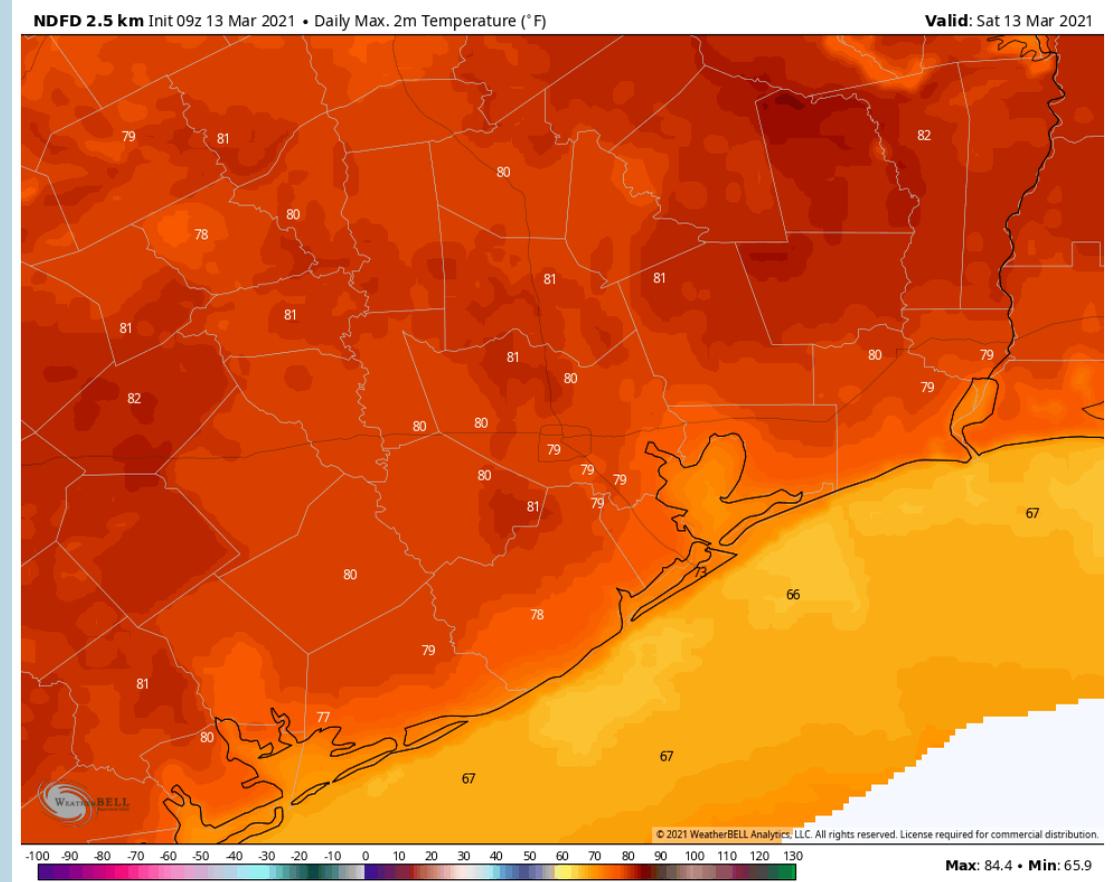

Sustained Winds (2 PM CT)

Simulated Radar Snapshot (4 PM CT)

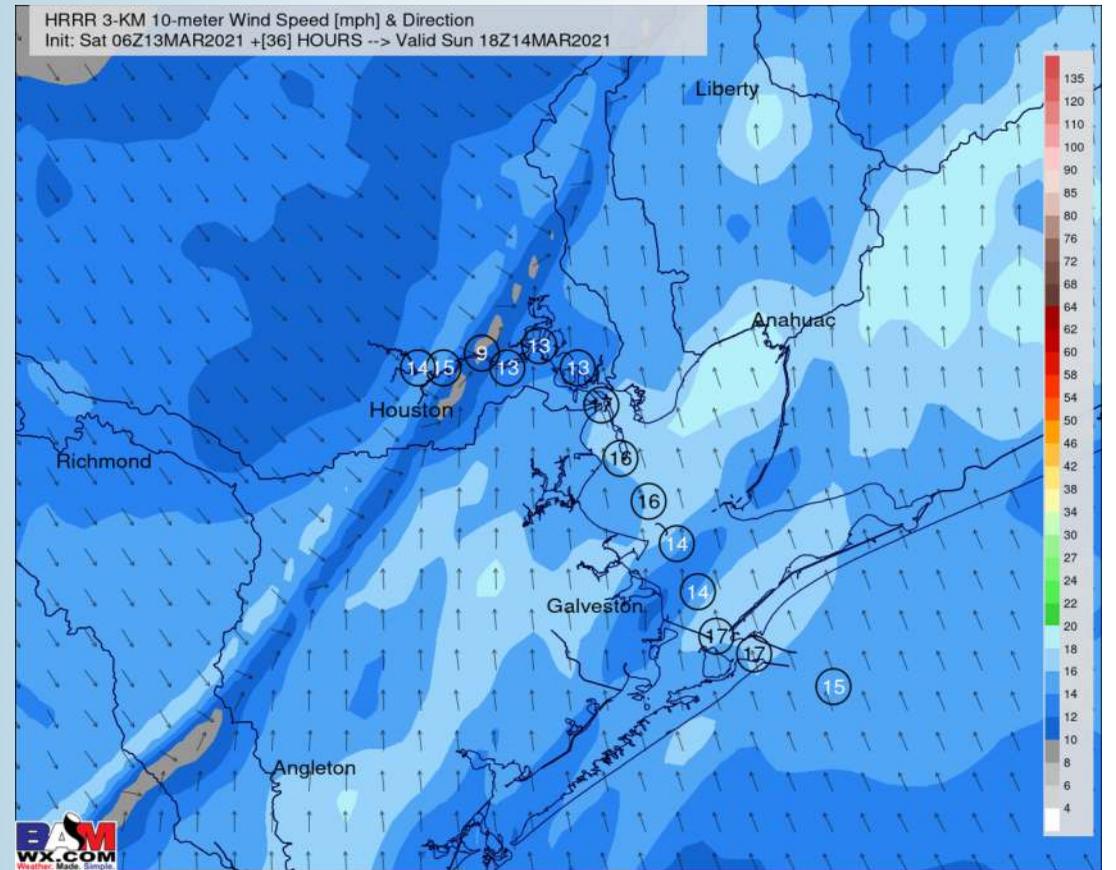

High Temperatures Saturday

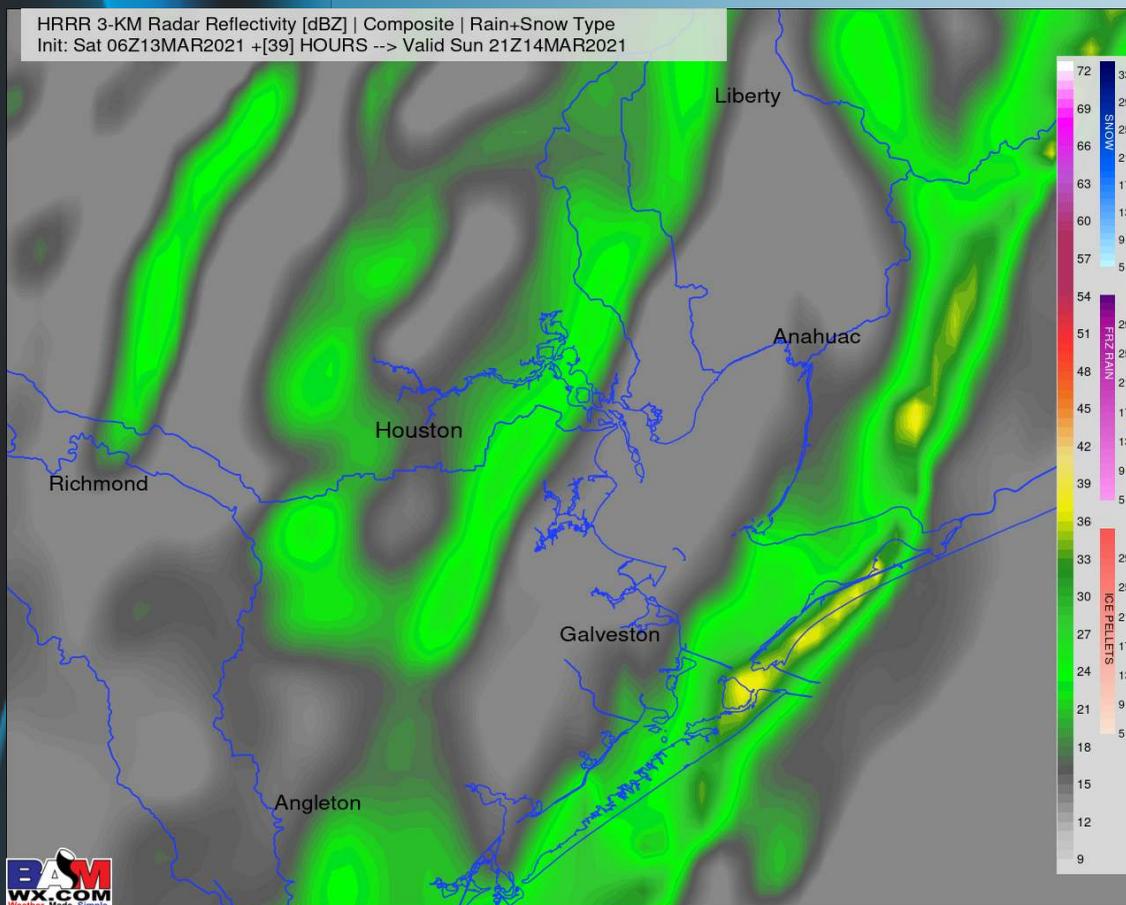

Short-Term Forecast Discussion

- Sunday will feature the best shot at rain over the next several days. A few isolated light showers will be possible in the morning hours, but the better chances will increase closer to ~1 PM as our cold front works its way into the area. A few thunderstorms are possible that could bring locally stronger winds and heavier rains for a time as the front passes. The front moves through the area in the 1-4 PM window with scattered light showers the rest of Sun evening
- Winds Sunday are anticipated to be 15-20 MPH with gusts 20-30 MPH from the SE. Gustiest of winds are most likely upon the cold front passage (~1-4 PM). Winds behind this front look to calm/ shift NW Sunday evening before a return of S/ SE winds on Monday.
- High Temperatures on Sunday look to be in the upper 60's F/ lower 70's F on Sunday.
- *Currently not in favor for fog on Sunday. If winds trend weaker moving forward into the forecast, then this could open up the opportunity.*

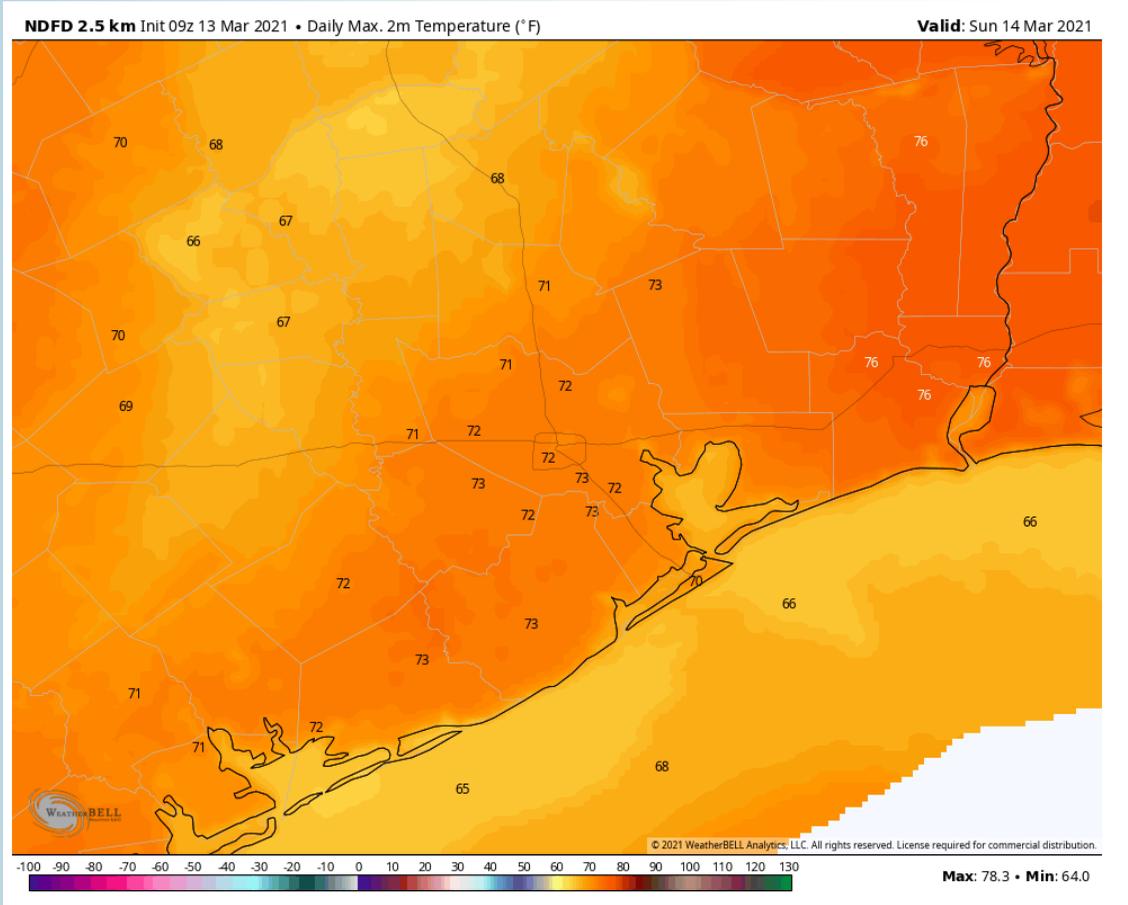

Sustained Winds (12 PM CT)

Simulated Radar Snapshot (3 PM CT)

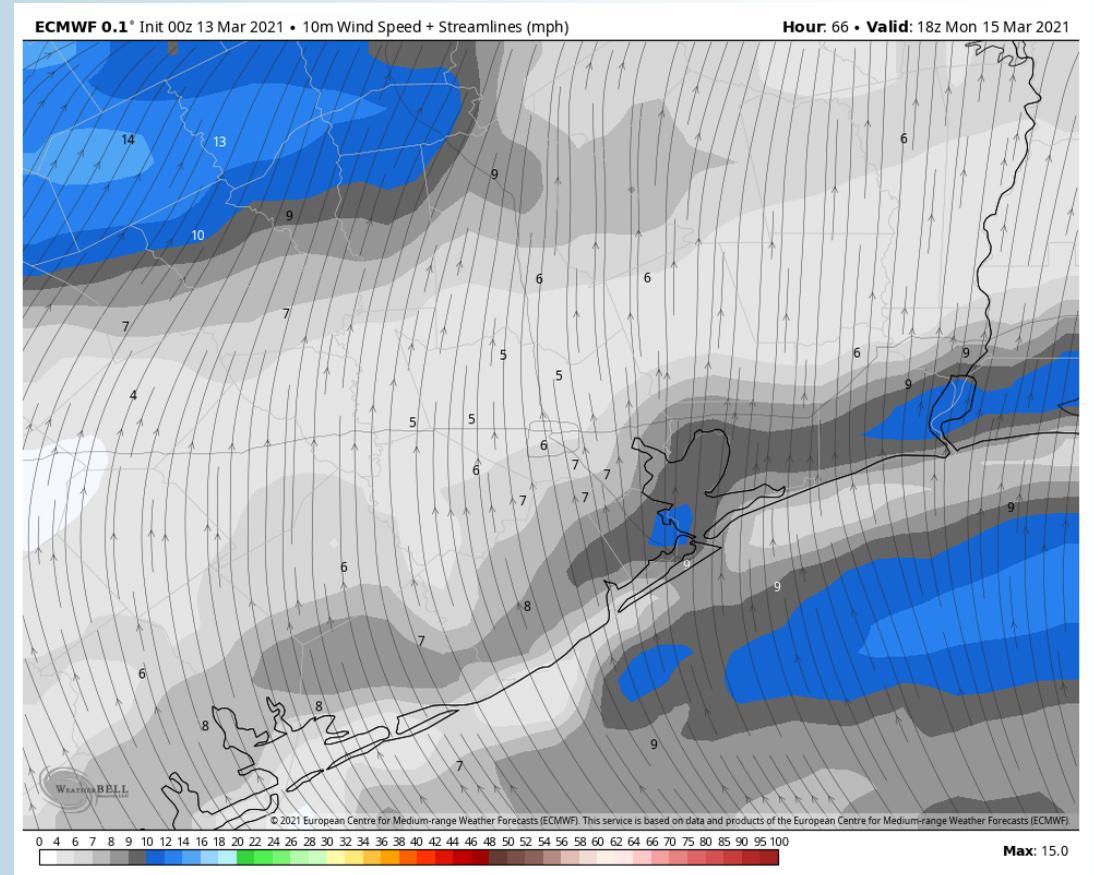

High Temperatures Sunday

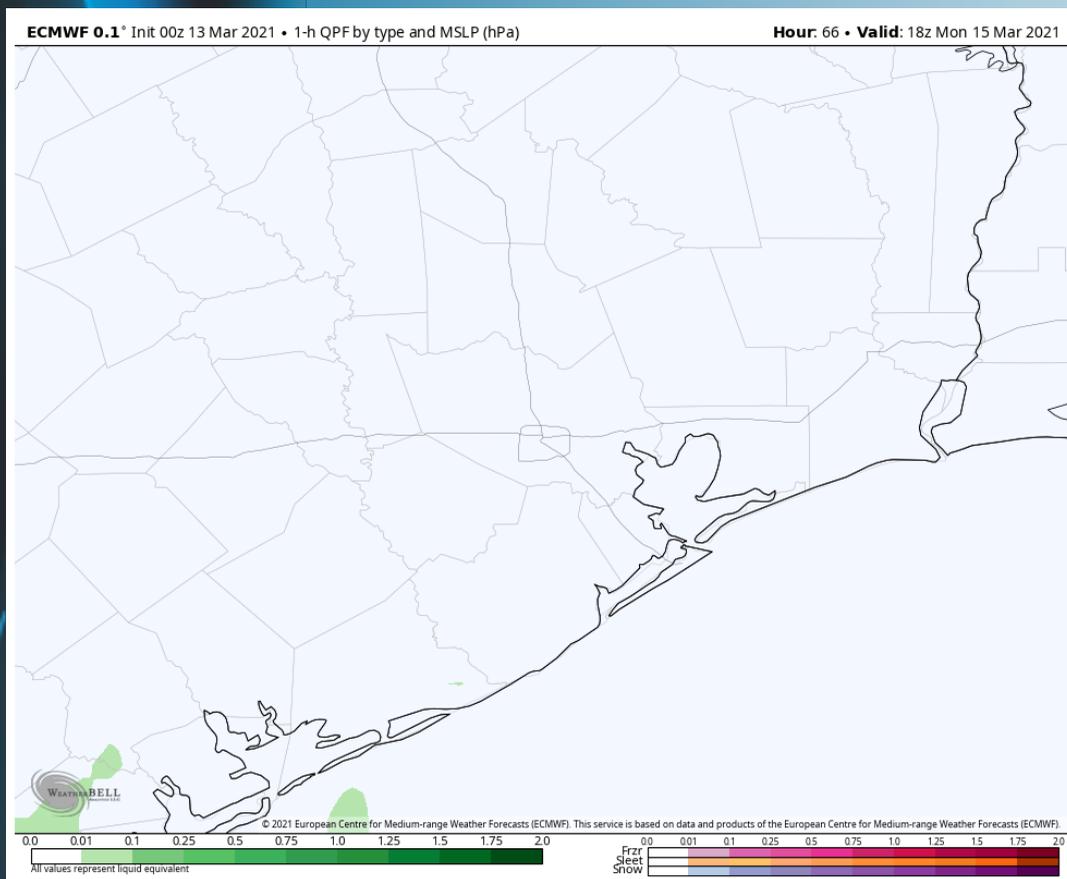

Short-Term Forecast Discussion

- After our front moves out of the area Sunday, we are anticipating Monday to see drier weather
- Winds out through about ~8 AM Monday will be light and variable before picking up to 5-10 MPH and returning the flow from the SE.
- Temperatures will continue to sit in the lower 70s over the waters, closer to 80 inland.
- *At this distance Monday morning looks to hold the potential of fog, best opportunity coming in the 4-10 AM window. More details to come once we get inside of short range guidance.*

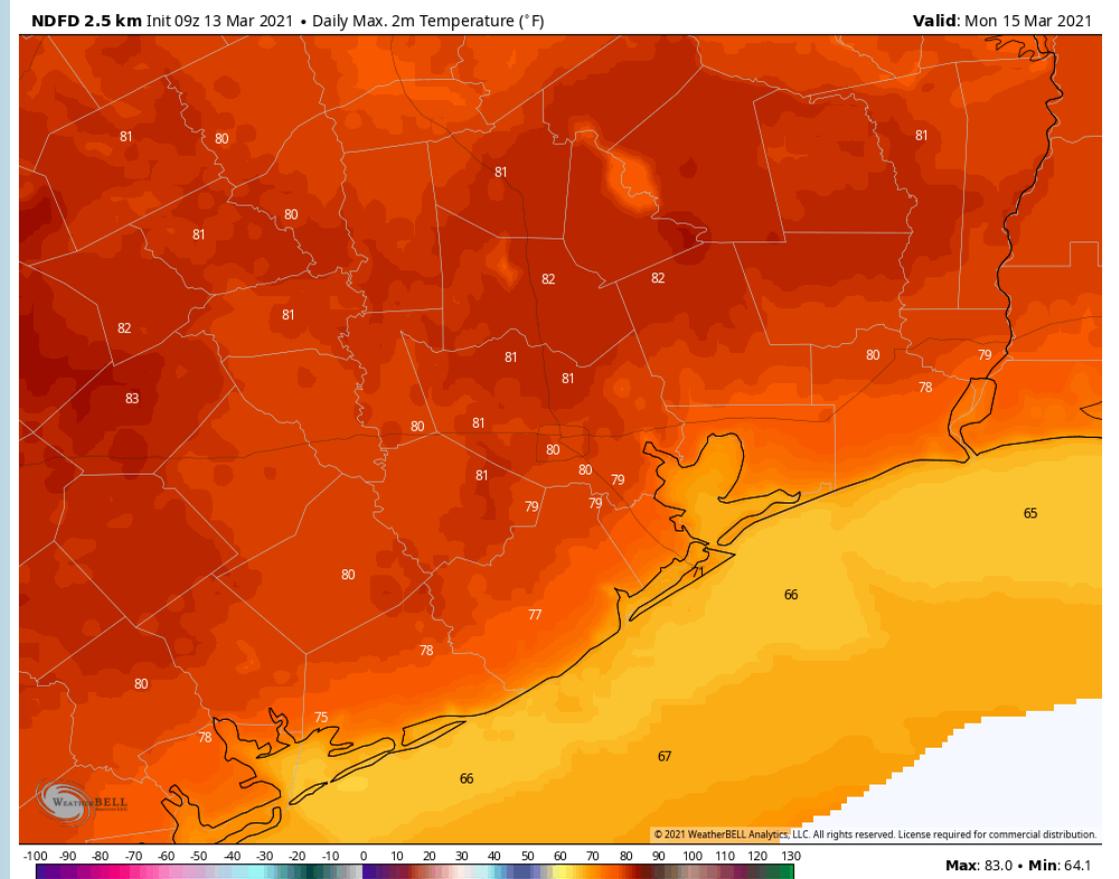

Sustained Winds (12 PM CT)

Simulated Radar Snapshot (12 PM CT)

High Temperatures Monday

Week 1 Forecast

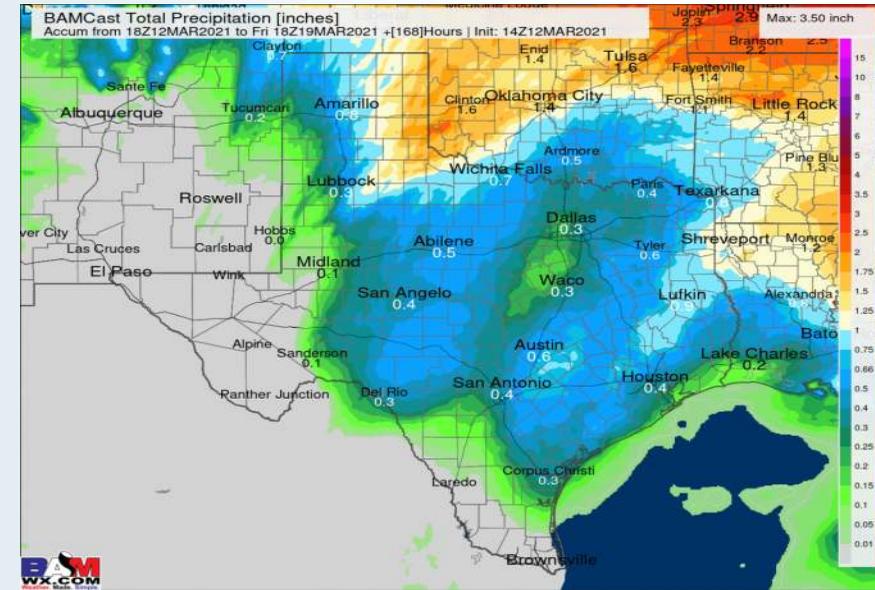

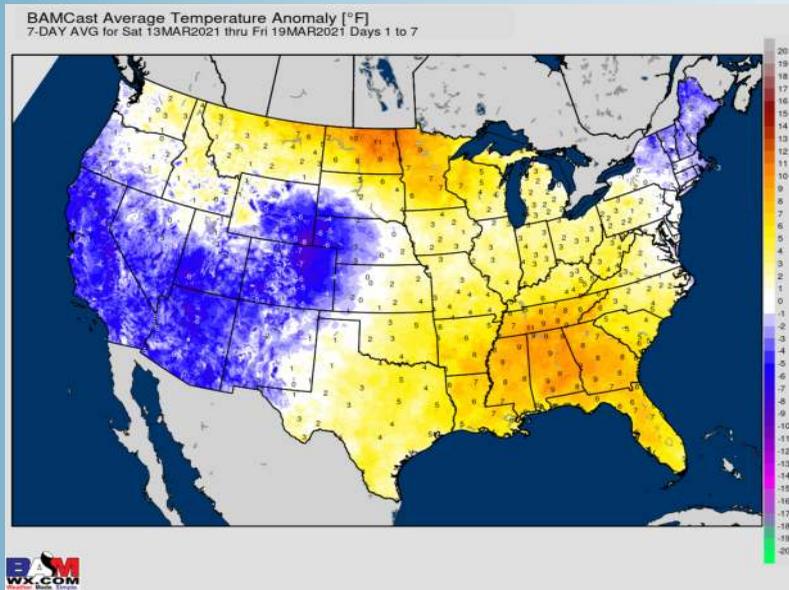

Long-Range Forecast Discussion

➤ Above normal temperatures are expected for the next few days before a cooler temperatures next THU – FRI with the passage of a cold front.

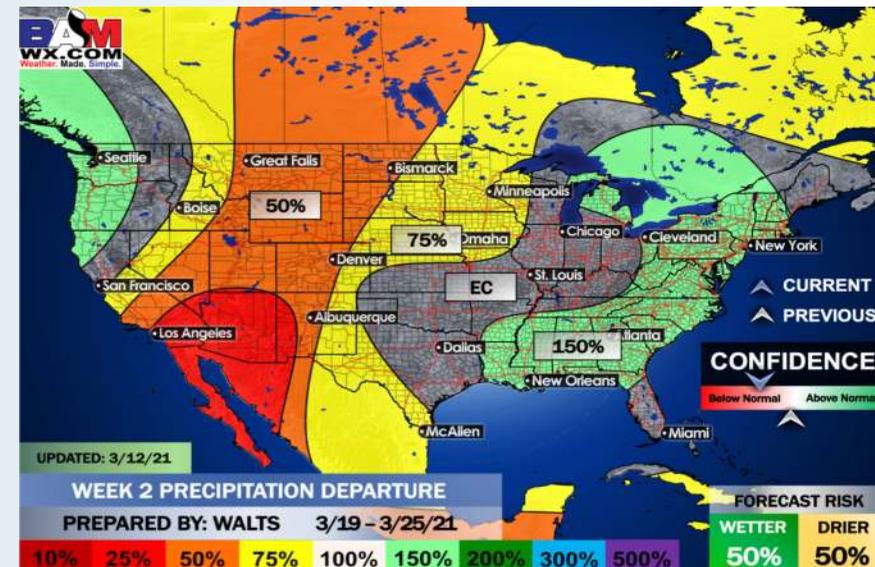

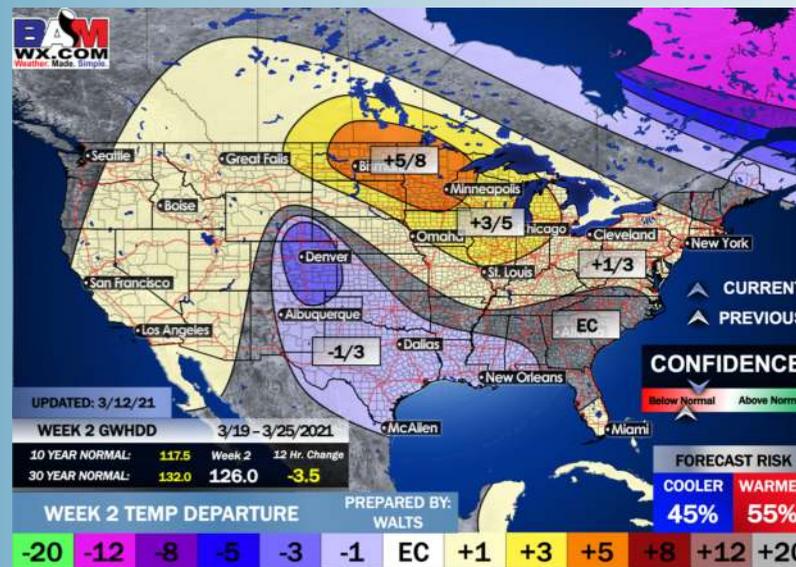

A few shots of precipitation will be possible over the next few days with drier conditions after Wednesday.

➤ The week 2 timeframe will offer up some precipitation risks with the best potential just East of the Houston area. Temperatures will likely drop below normal for this period.

➤ The end of March/ early April will feature a more active subtropical jet with increased moisture risk. Temperatures are expected to be warmer than normal.

Week 2 Forecast

Weeks 3/4 Forecast
