Monday, March 22nd, 2021

Short-Term Forecast Discussion

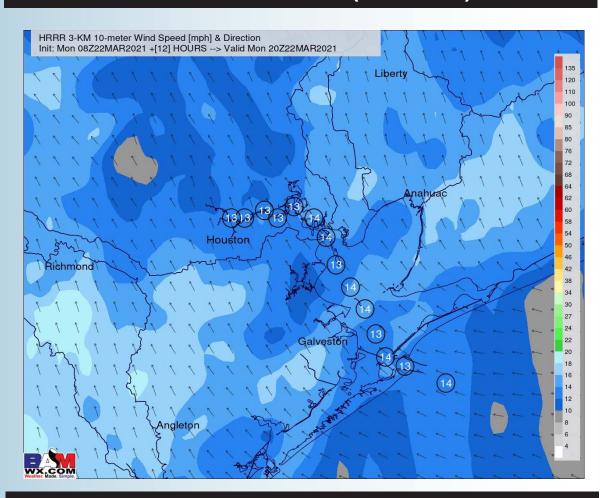

➤ While a few isolated sprinkles/ very light rain showers will be possible through the AM hours, the better chances look to come during the afternoon/evening hours, most notably after ~5 PM. A few iso rumbles of thunder Monday evening cannot be ruled out. Precip looks to stay generally light to at times moderate overnight.

- Winds across the area will continue coming out of the SE and will increase throughout the day. Into the afternoon hours today, sustained winds of 13-18 MPH with gusts 18-23 MPH will be possible. A locally stronger wind gust will be possible with the passing of precip Monday evening.
 - Highs Monday should be sitting in the lower 70s.
 - Fog is currently not favored for today.

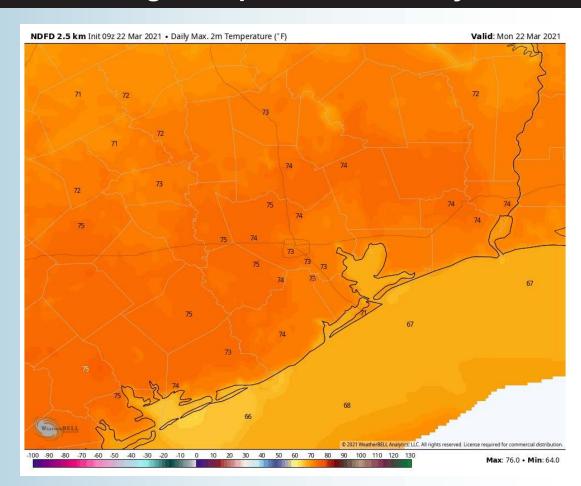

Simulated Radar Snapshot (7 PM CT)

Sustained Winds (3 PM CT)

High Temperatures Monday

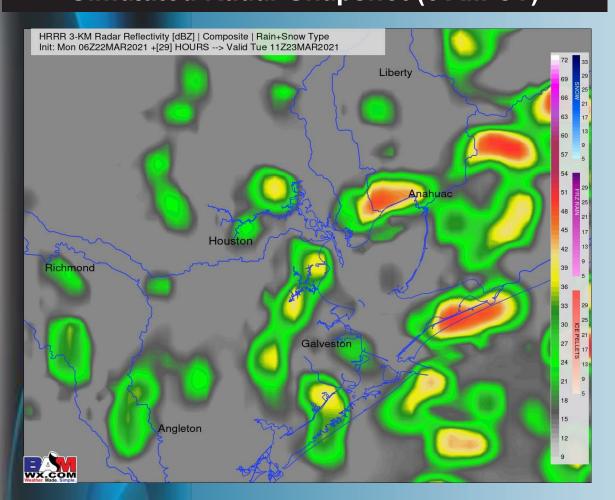

Tuesday, March 23rd, 2021

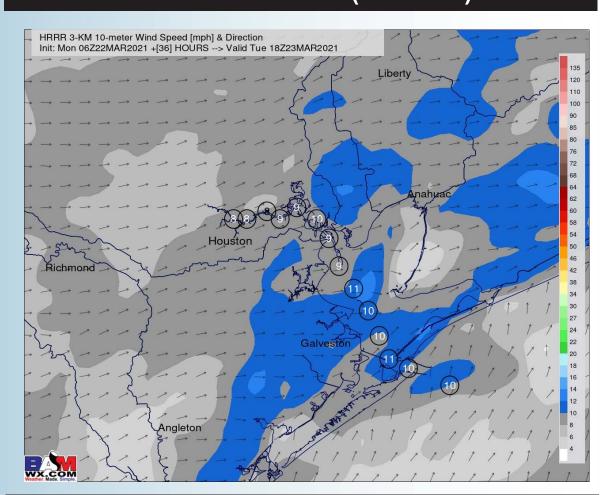

Short-Term Forecast Discussion

- Scattered showers and a few iso rumbles of thunder will be possible through the first half of Tuesday. Precipitation chances will taper off late morning, remaining more quiet into the PM hours.
- Winds will be a bit tricky on Tuesday. Winds before 4 AM will be coming from the SSE at 8-13 MPH. Beyond this, a cold front will try and work its way toward the coast coming from the N, but then stalls right near the coastline. Winds may turn N for a very brief period of time Tuesday early PM, but then turn more SW into the evening at 5-10 MPH.
 - Highs will be sitting in the mid 70s Tuesday, warmer inland.
 - No fog is expected for Tuesday. Guidance at this distance is still hinting at fog potential Wed AM, something that will be refined in coming reports.

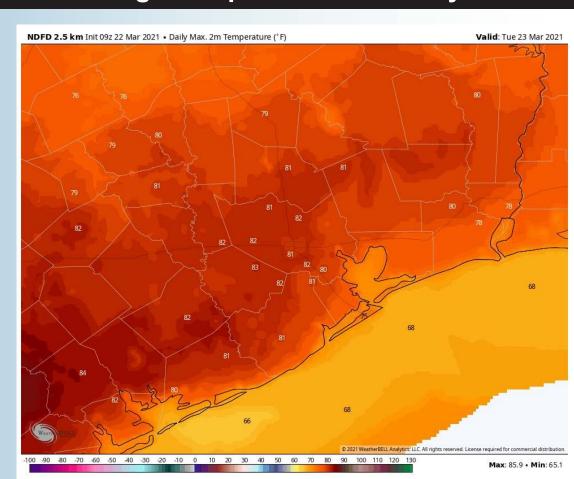

Simulated Radar Snapshot (6 AM CT)

Sustained Winds (1 PM CT)

High Temperatures Tuesday

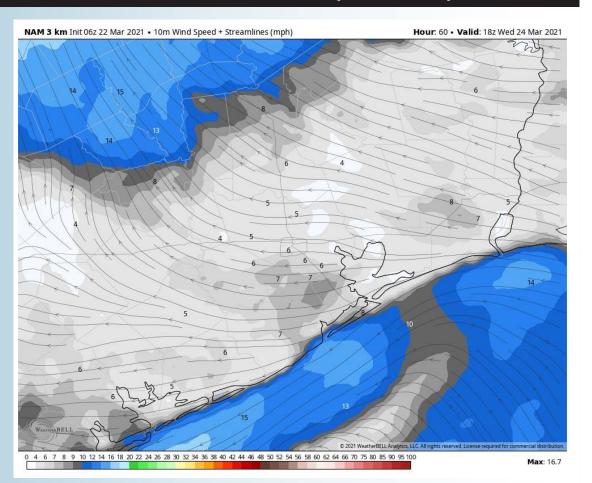

Wednesday, March 24th, 2021

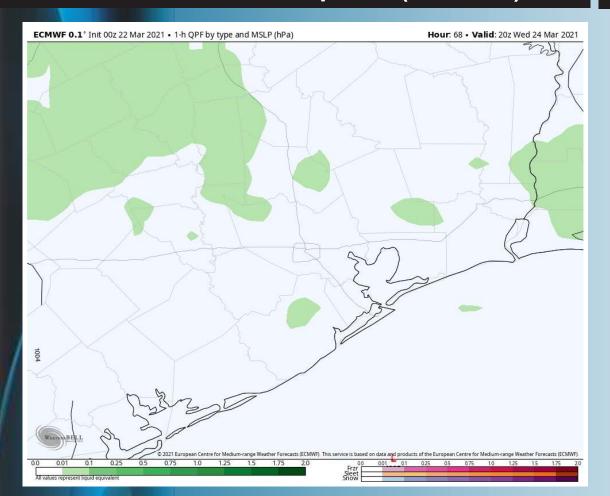

Short-Term Forecast Discussion

- Scattered showers and thunderstorms will be increasingly likely on Wednesday, especially late morning into the PM hours. There is quite a bit of forecast energy in the atmosphere here, so locally heavy downpours & gusty winds in the storms will be on the table.
- Winds will be forecast out of the ESE on Wednesday overall, sustained at 8-13 MPH, gusting at times up to 15-20 MPH.
 - Highs will be sitting in the lower 70s Wednesday, warmer inland.
- As touched on in the slide prior, we think there is a possibility for fog Wednesday AM (mainly after midnight Tuesday night), however, at this distance we have lower confidence on the exact location and start time. This will be fine-tuned in the coming reports.

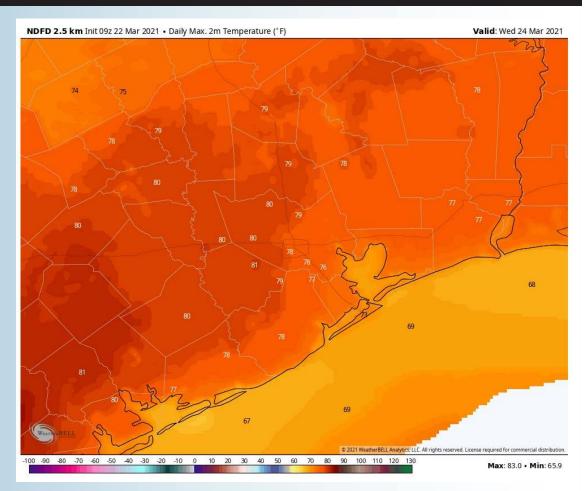

Sustained Winds (1 PM CT)

Simulated Radar Snapshot (3 PM CT)

High Temperatures Wednesday

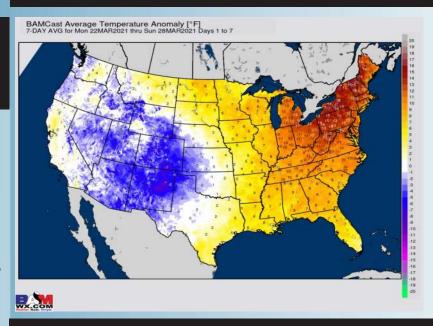

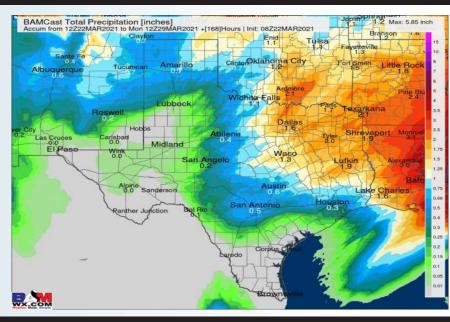

Long-Range Forecast Discussion

- Temps start climbing on average more above normal over the course of the next week. Today Thursday will offer up the best shots of moisture this week with with heavier downpours/ storms possible.
 - Temperatures likely average out to near normal for the week 2 timeframe with warmer weather out ahead of a system on Mar 29 31 and cooler temps in behind. Precipitation should run near normal as well with better moisture chances with the storm system around Mar 29 31.
- April will feature a more active subtropical jet with increased moisture risk.

 Temperatures are expected to be near normal and likely fluctuate between warmer and cooler pending passages of systems.
