Short-Term Forecast Discussion

- Favoring much of today to stay on the quieter side until the afternoon hours (~4 PM and beyond) for better scattered shower chances. An isolated rumble of thunder or two cannot be ruled out at this time, but think the threat for strong storms is North of our area.
- Winds for much of the day today will be coming from the SE at 10-15 MPH sustained, gusts 15-20 MPH possible.
- High temps will hover in the upper 70s.
- *No fog expected on today, but there may be some reduced visibility with any precipitation*

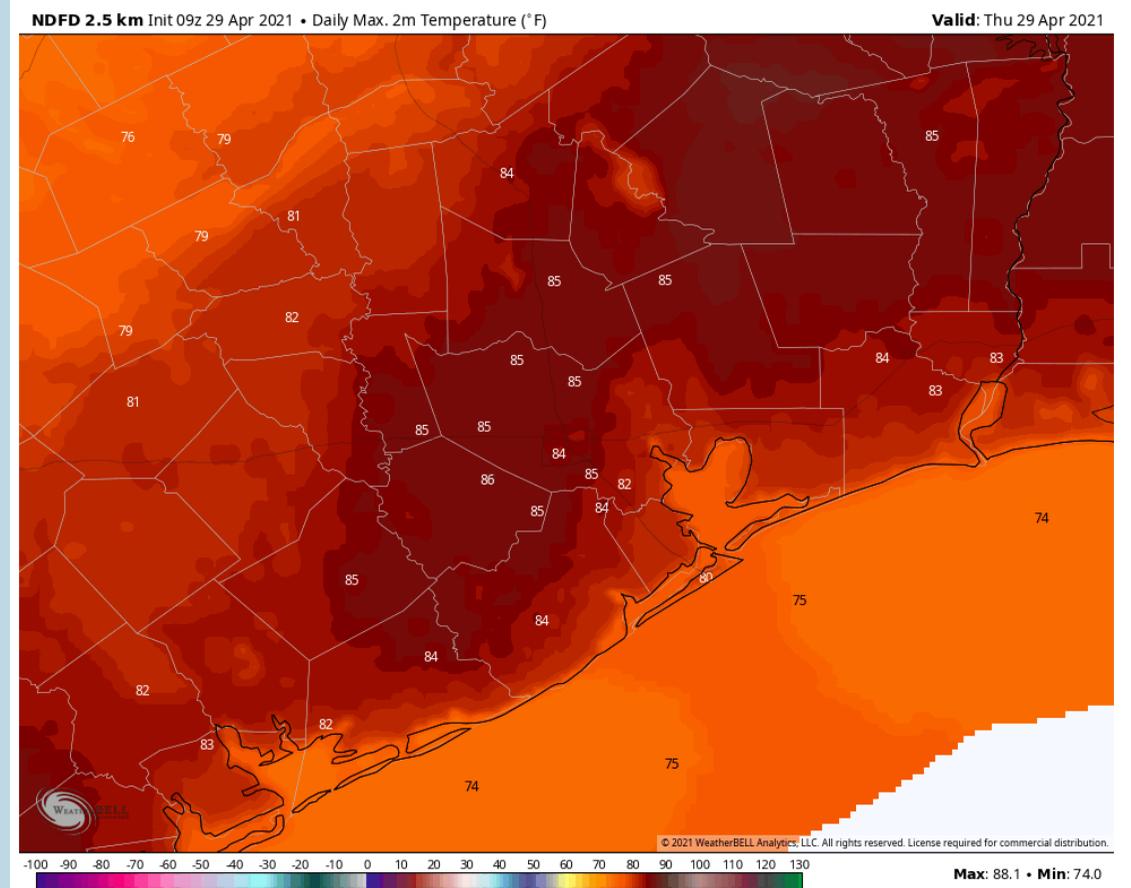

Sustained Winds (2 PM CT)

Simulated Radar Snapshot (6 PM CT)

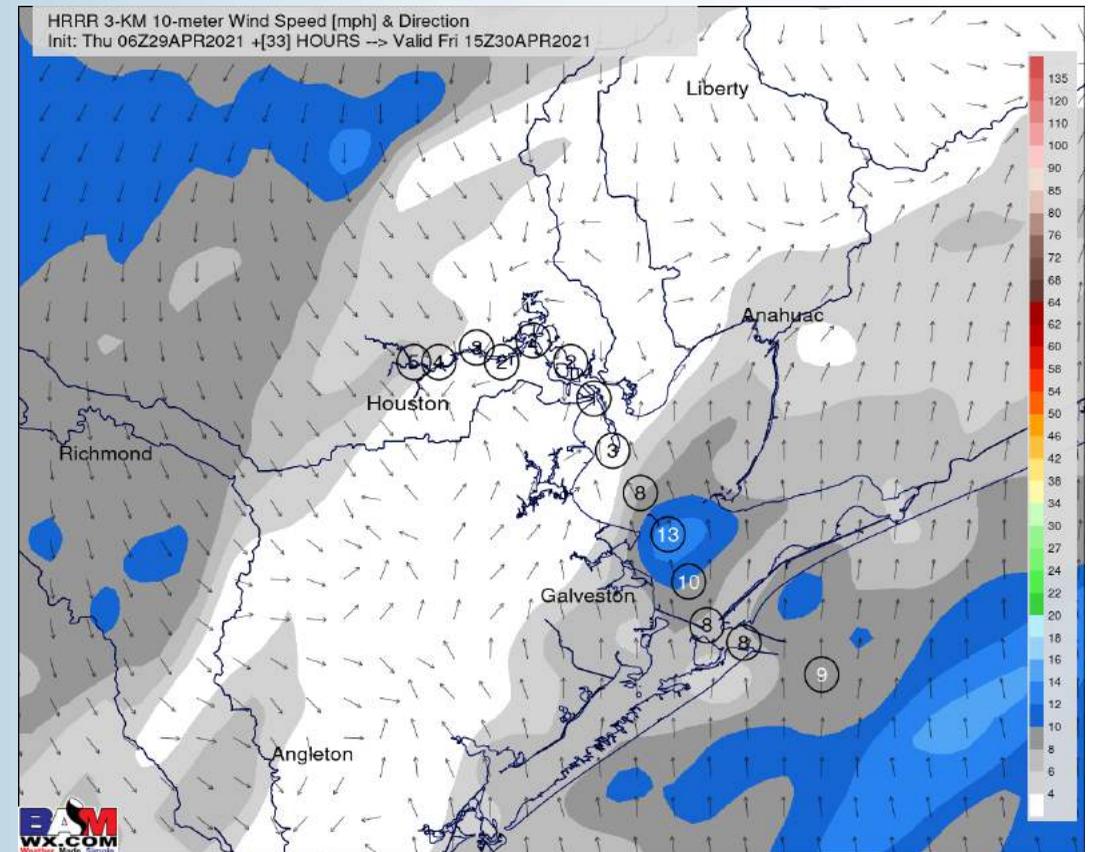

High Temps Today

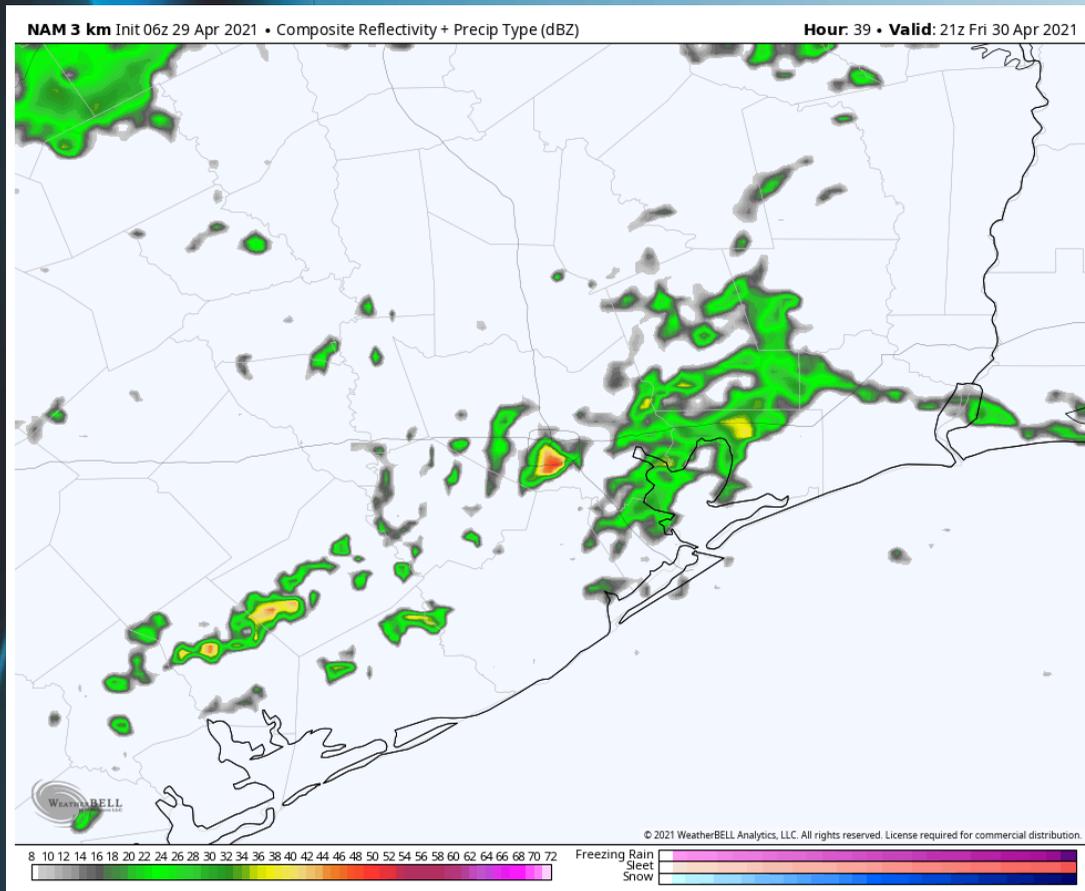

Short-Term Forecast Discussion

- Much of Friday will hold precipitation chances as we are favoring scattered showers and a few rumbles of thunder during the day. Severe weather is not anticipated, but a few rounds of moderate rains cannot be ruled out. Precip will be very hit and miss during the day and will come in an on/off fashion.
- Winds look to generally stay coming out of the SE until Friday evening when a wind shift featuring a more northerly component is more likely. For much of the day a sustained wind of 5-10 MPH looks likely with an increase in wind near the sunset timeframe.
- Low temps will top out in the lower 70s Friday
 - *No fog expected Friday.*

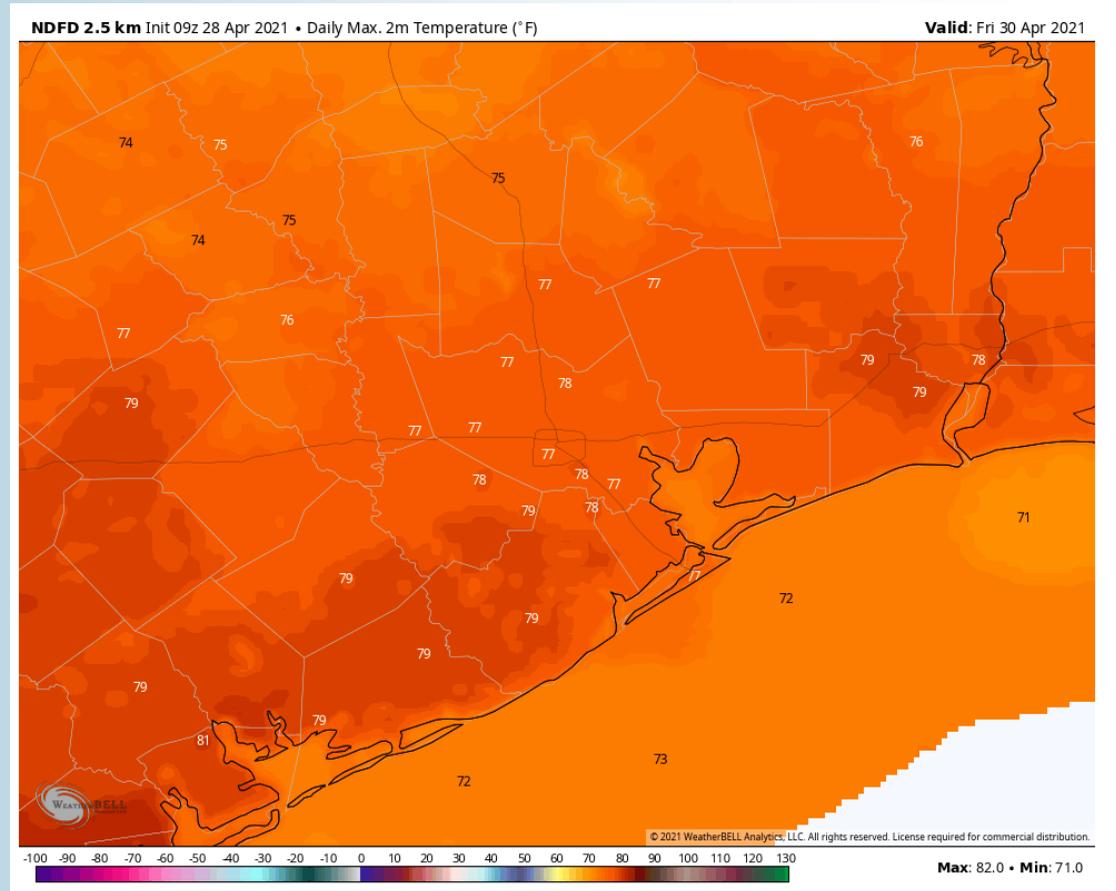

Sustained Winds (10 AM CT)

Simulated Radar Snapshot (4 PM CT)

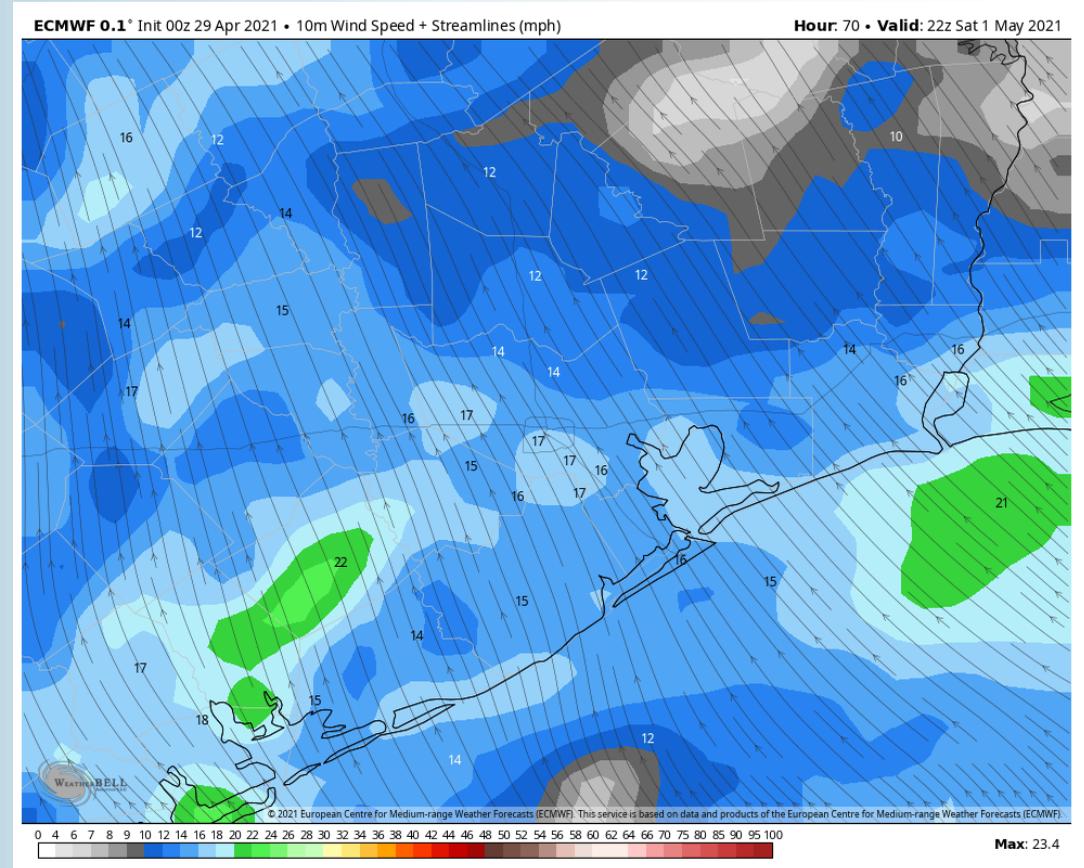

High Temps Friday

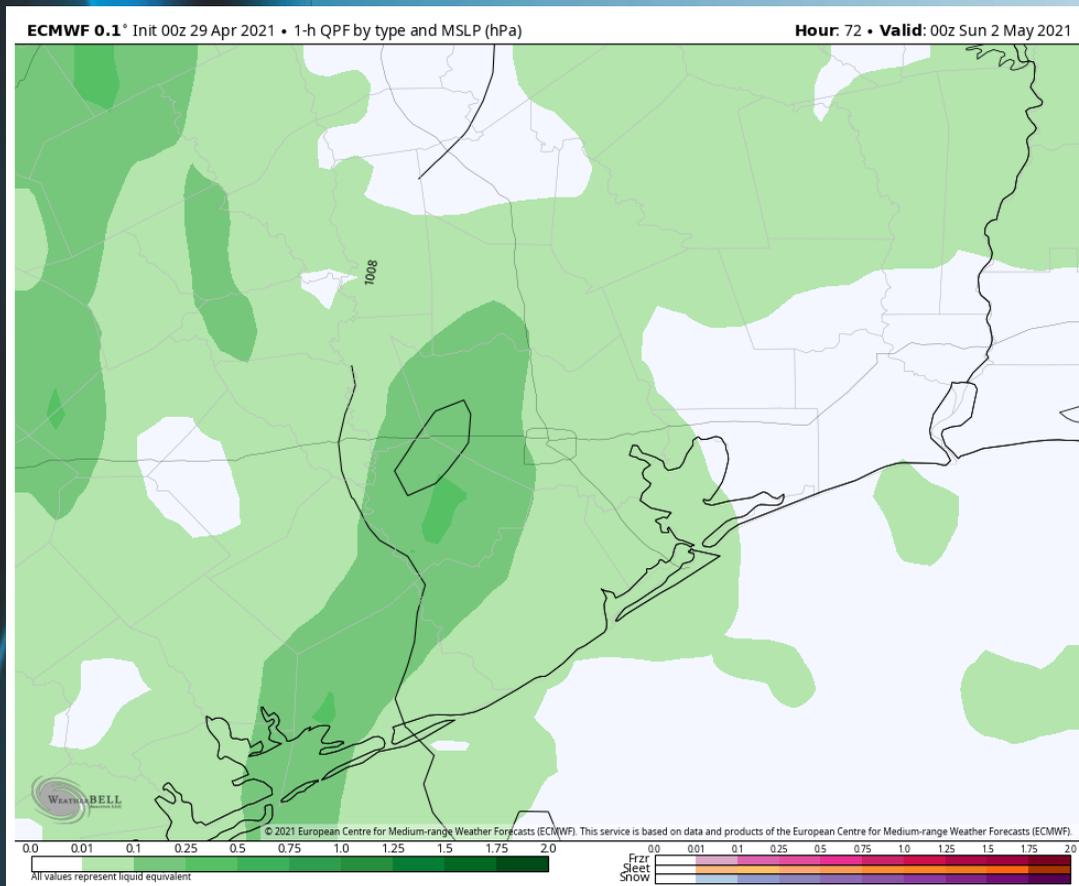

Short-Term Forecast Discussion

- Saturday AM looks to feature at least some drier weather, however we will then watch the back half of the day for another round of precipitation to work into the area.
- Expecting winds to shift back more to the SE early in the day with sustained winds expected at 15-20 MPH, gusting at times up to 20-30 MPH.
- High temps Saturday should sit in the mid 70s
 - *No fog expected into Saturday*

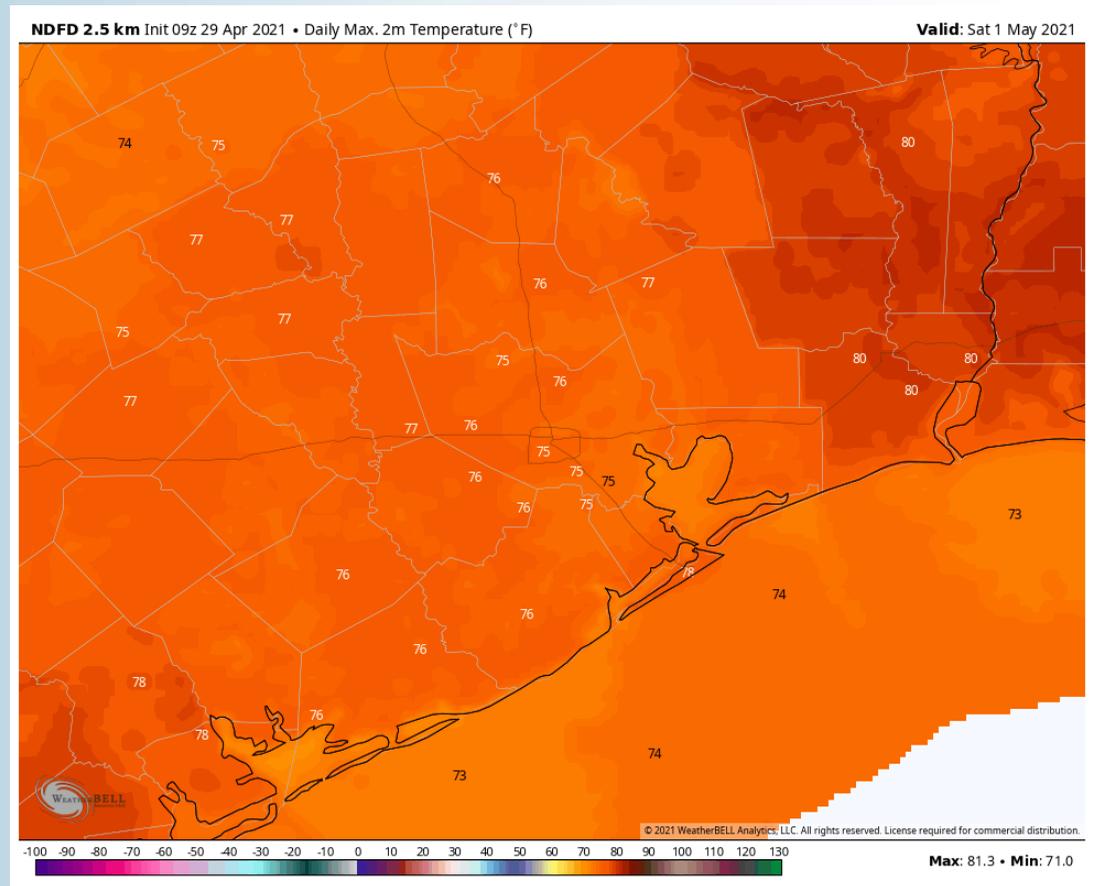

Sustained Winds (5 PM CT)

Simulated Radar Snapshot (6 PM CT)

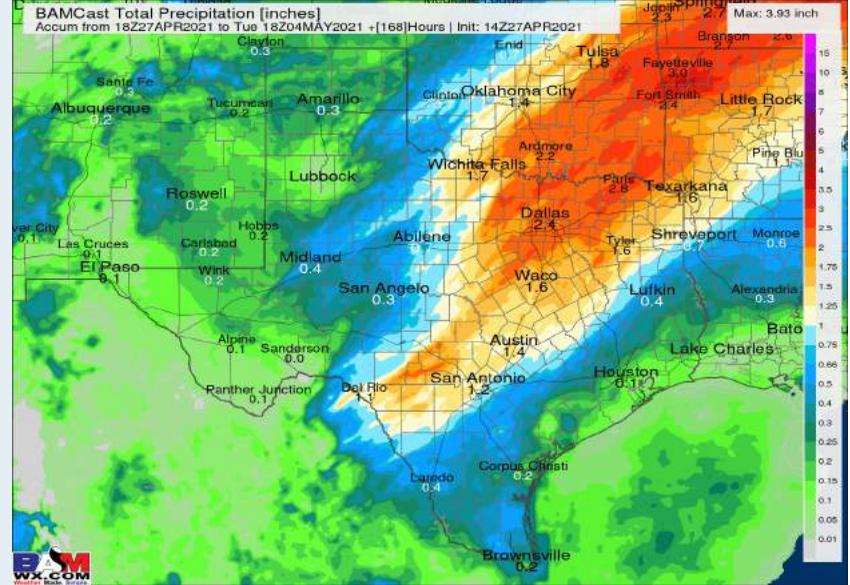

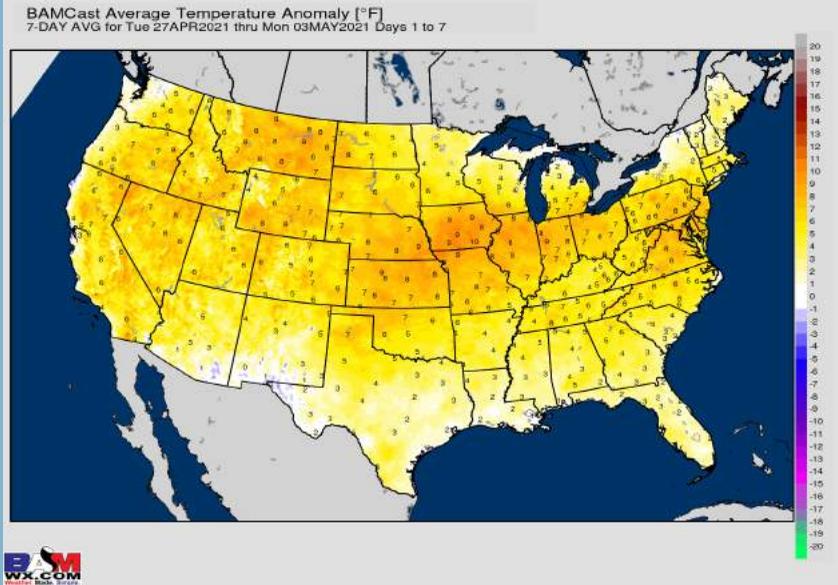

High Temps Saturday

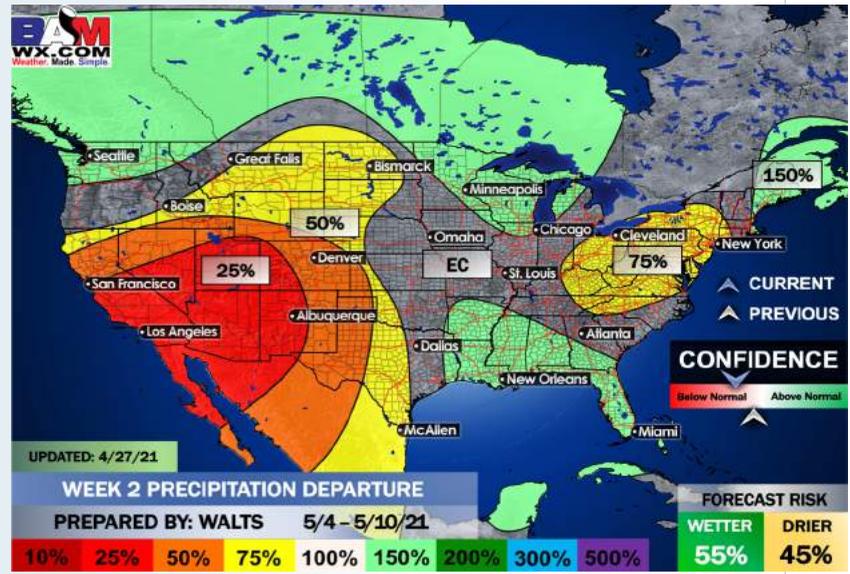

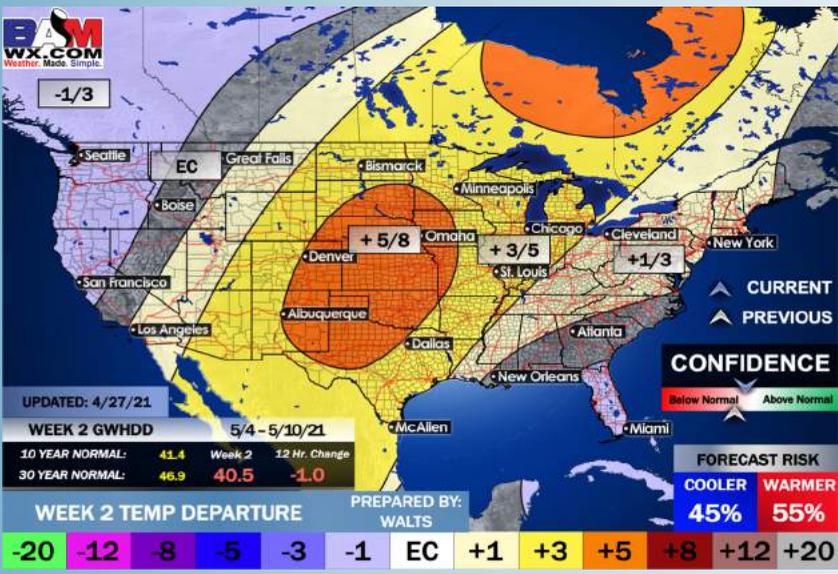

Long-Range Forecast Discussion

- Warmer than normal temps expected over the next week, with an overall active pattern continuing for the next few days
- Temps likely average out close to normal/slight above normal for the week 2 period...as we roll forward here as well, we would anticipate near-normal to slightly below normal moisture chances.
- The above normal temps continue in the weeks 3-4 period, with precipitation chances looking to start to get more active as well above normal at this distance.
