Short-Term Forecast Discussion

- Today for much of the day is expected to be dry. There does however continue to be small chances (10-20%) for very light and isolated moisture in the PM (3 PM – 9 PM), but plenty of dry air should keep this quite limited.
- Winds should continue to remain from the SE, sustained around 10 - 15 with gusts around 15 – 20 MPH. After sunset, winds likely weaken to 8 – 13 MPH sustained.
- High temperatures are expected to be in the upper 60s F near the Boarding Station.
 - *No fog anticipated today.*

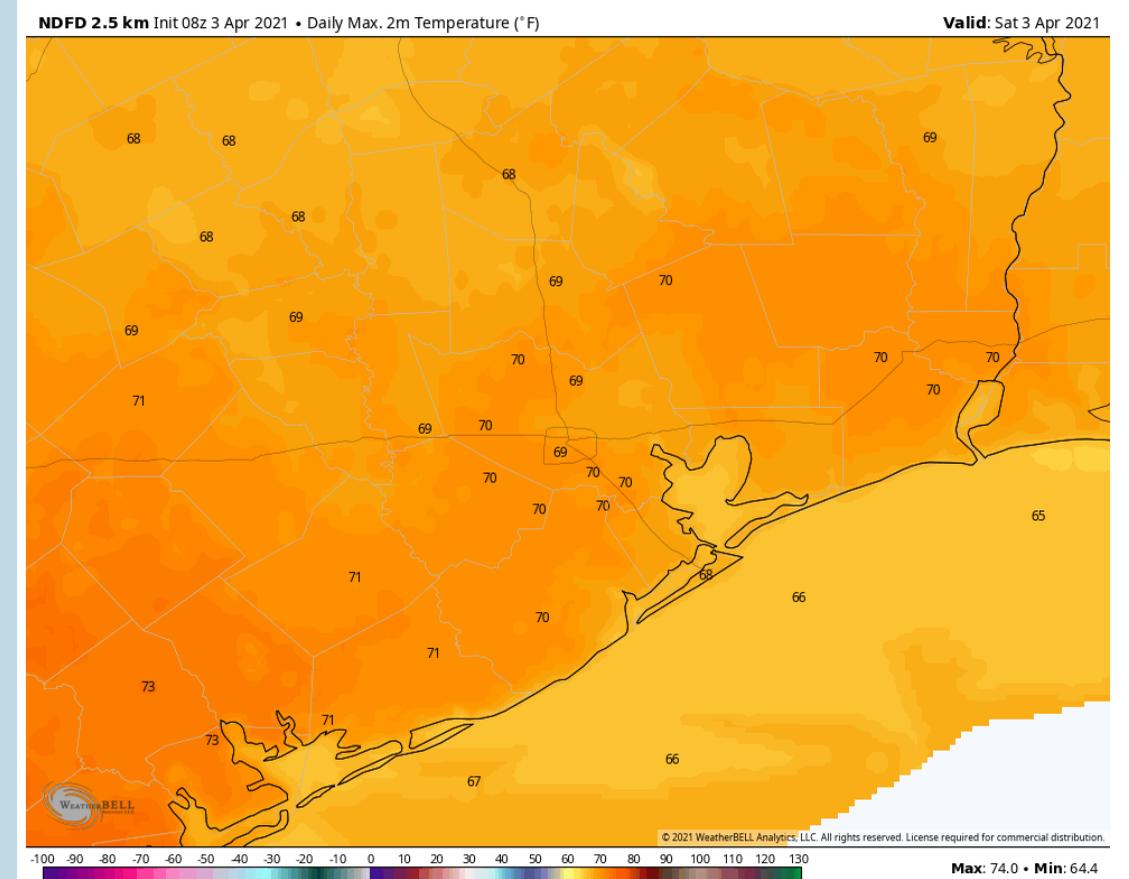

Sustained Winds (3 PM CT)

Simulated Radar Snapshot (7 PM CT)

High Temperatures Today

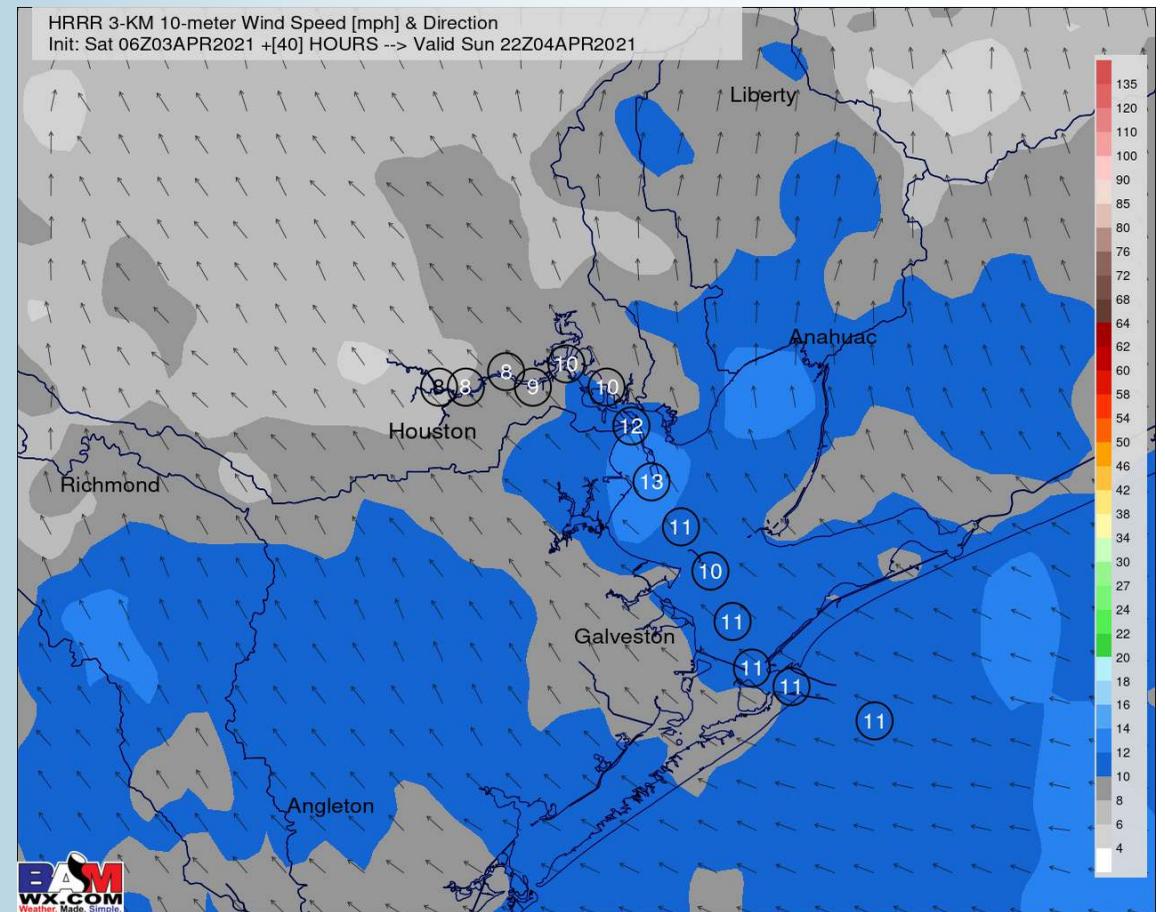

Short-Term Forecast Discussion

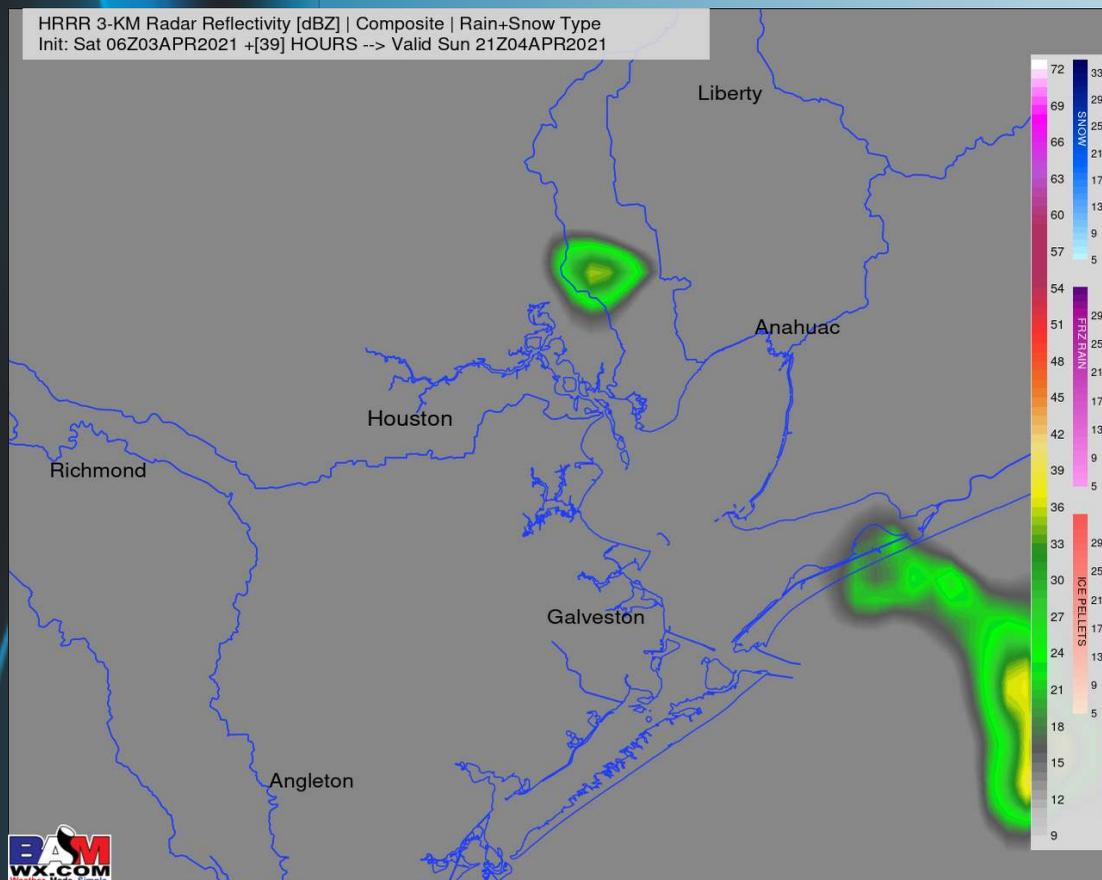

- Similar to Saturday, the late afternoon hours of Sunday look to hold a ~10-20% chance of a rather isolated shower. Best window for precipitation would be from 4-9 PM. Overall intensity expected to be light and any precip would likely be short lived.
- Generally weak winds in the AM may be a bit out of the ESE before picking up a bit into the afternoon and shifting more out of the SE. Winds in the PM look to be sustained around 8 – 13 MPH with gusts ~ 15 MPH possible.
- High temperatures look to get into the upper 60s to lower 70s F over open waters for Sunday.

➤ *Not anticipating fog Sunday*

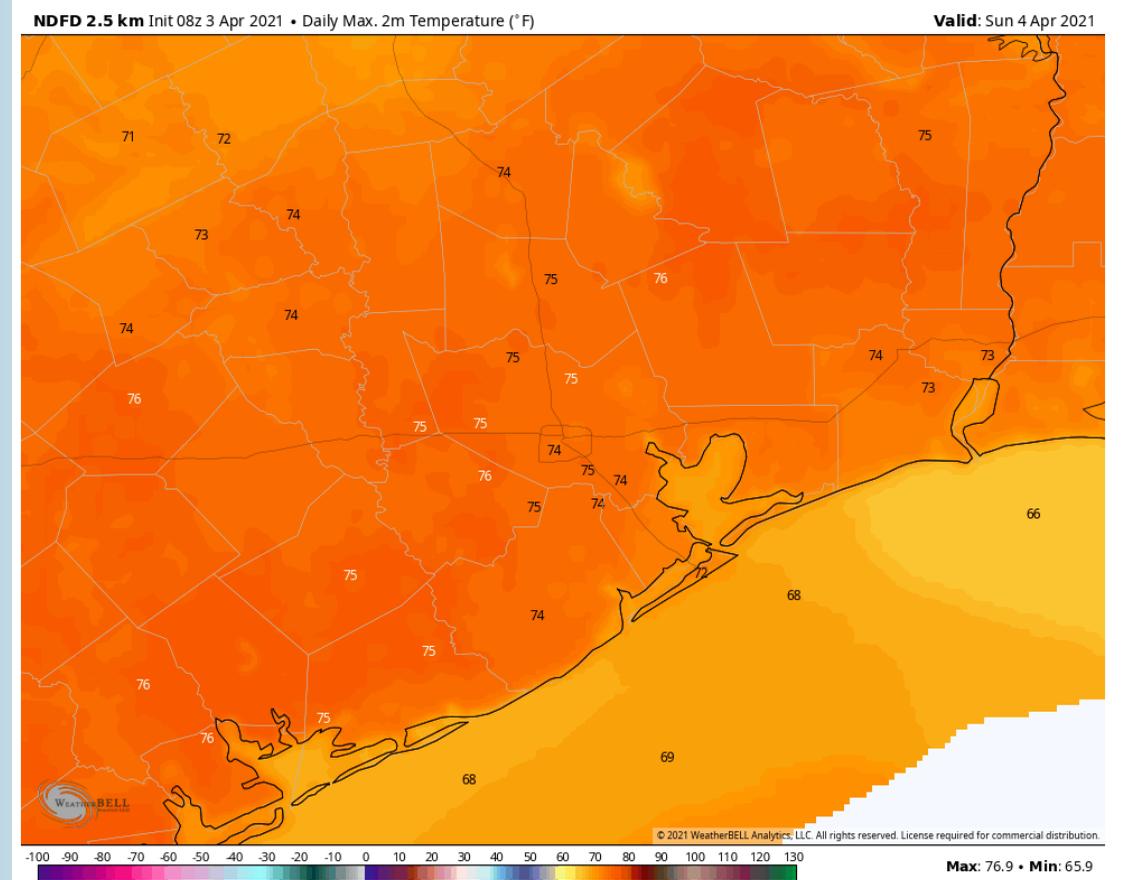

Sustained Winds (5 PM CT)

Simulated Radar Snapshot (4 PM CT)

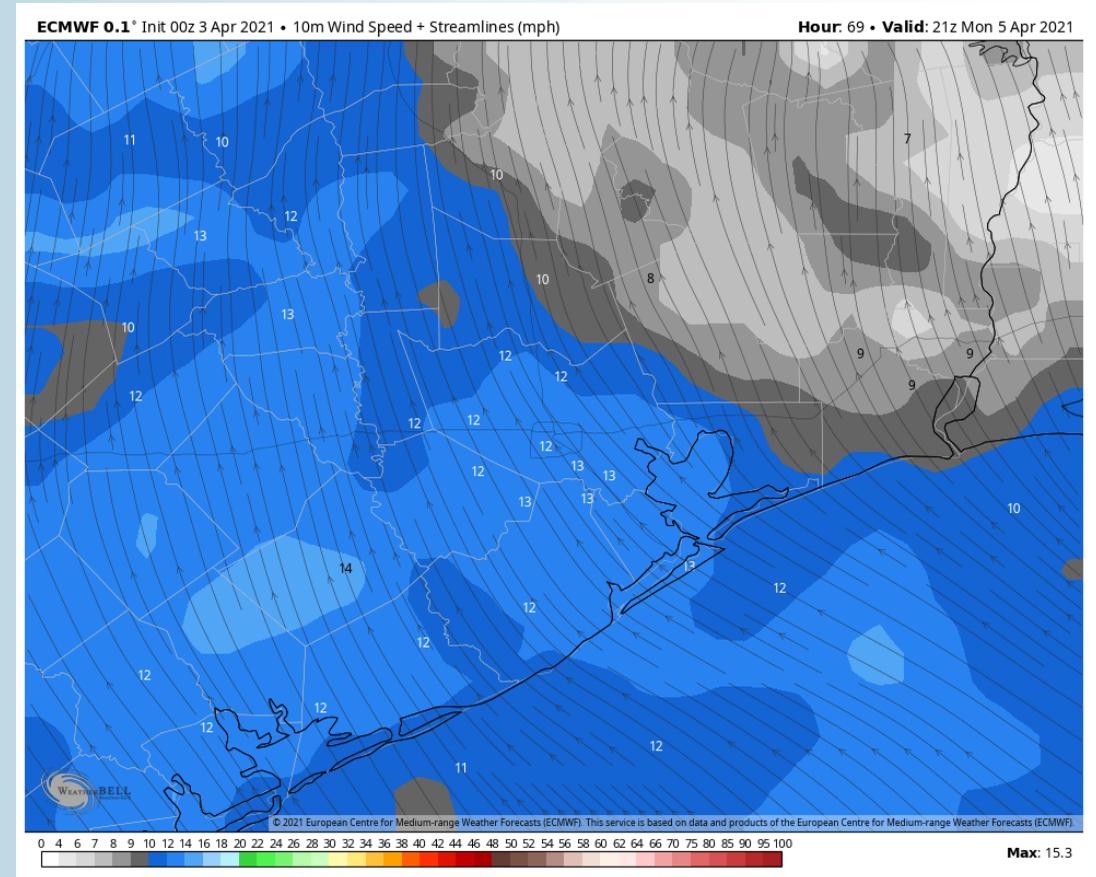

High Temperatures Sunday

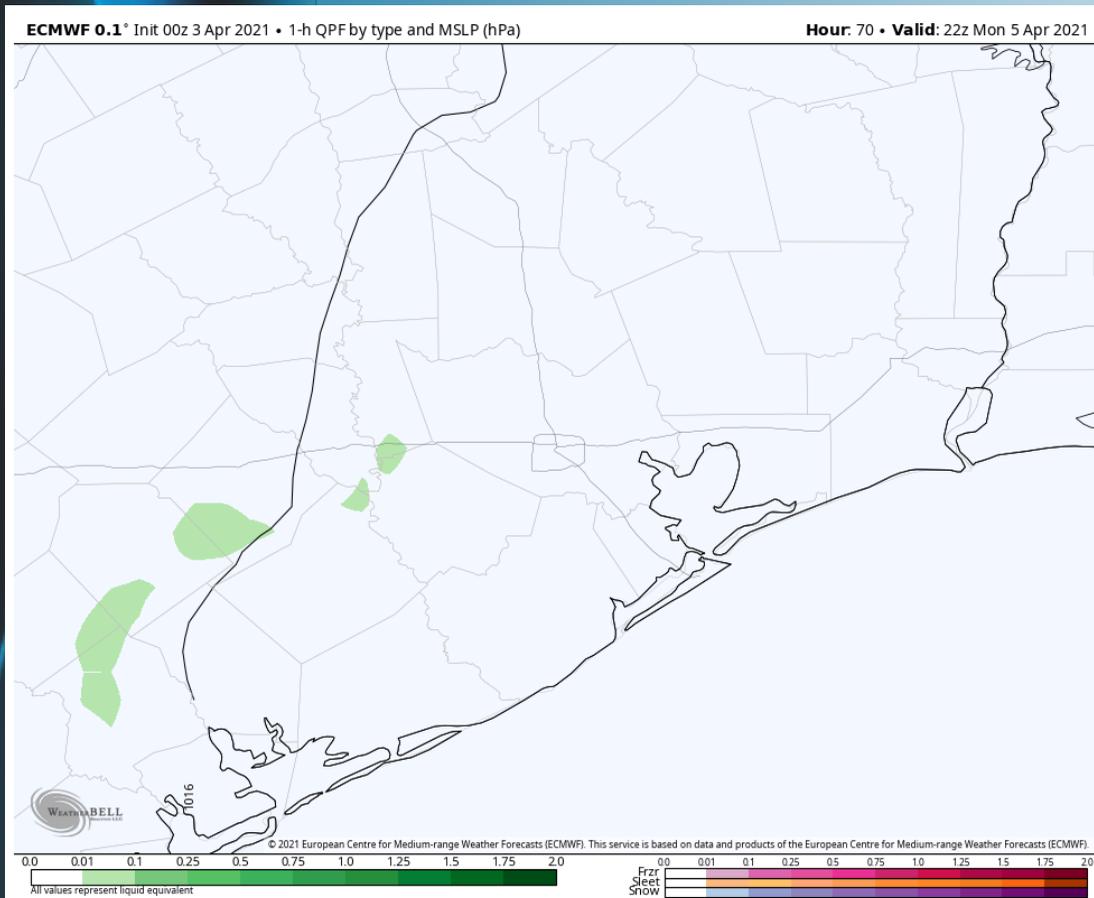

Short-Term Forecast Discussion

- **Currently favoring a dry day on Monday.**
- **Monday looks to continue our theme of winds coming out of the SE at 8-13 MPH with gusts 13-18 MPH possible.**
- **Highs on Monday are favored to be in the upper 60s to lower 70s across the area**
- ***While it is currently not favored, we need to keep an eye on the pre-dawn hours of Monday for fog potential. While a SE wind + surface moisture would support fog, atmospheric profiles are not incredibly supportive. This is a risk we will fine tune in coming reports.***

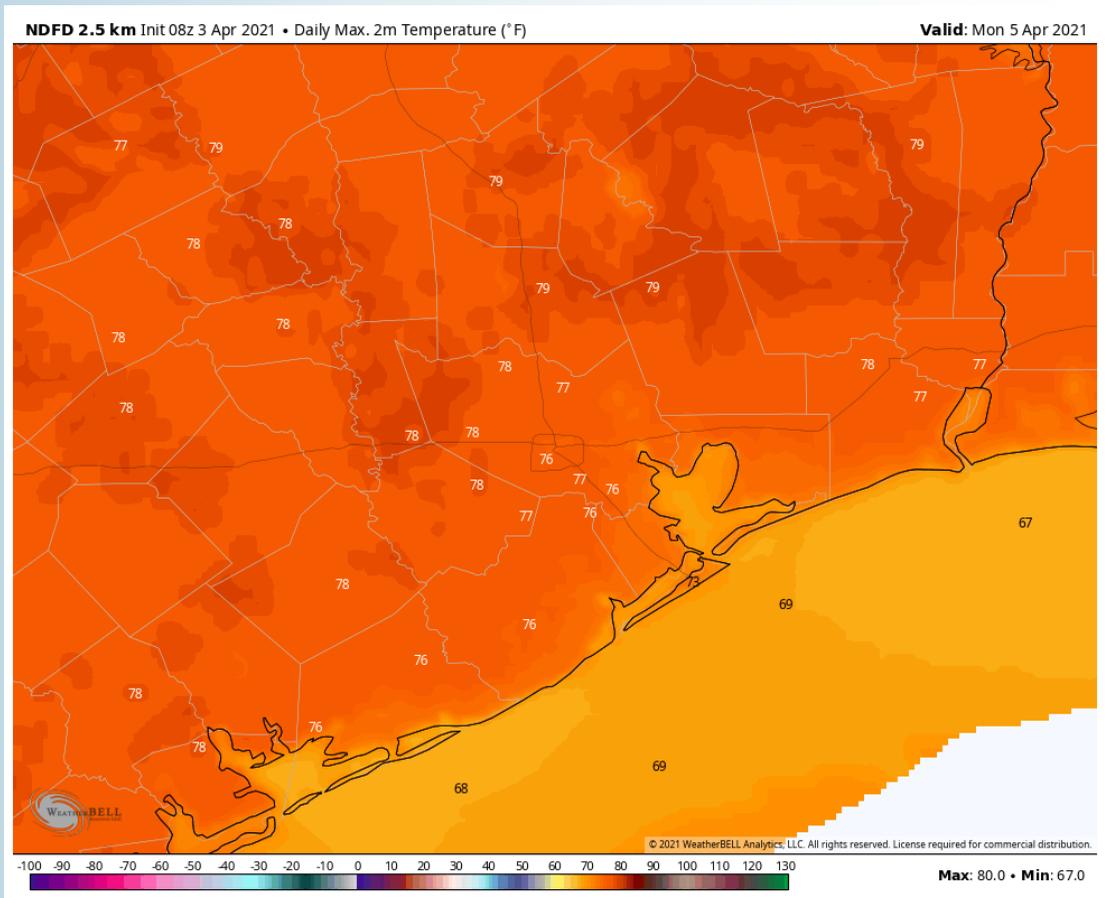

Sustained Winds (4 PM CT)

Simulated Radar Snapshot (5 PM CT)

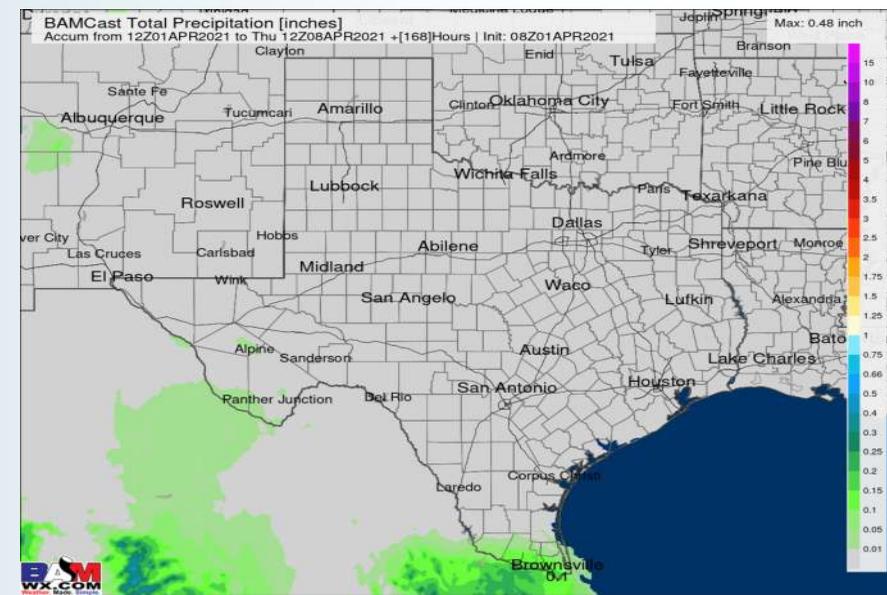

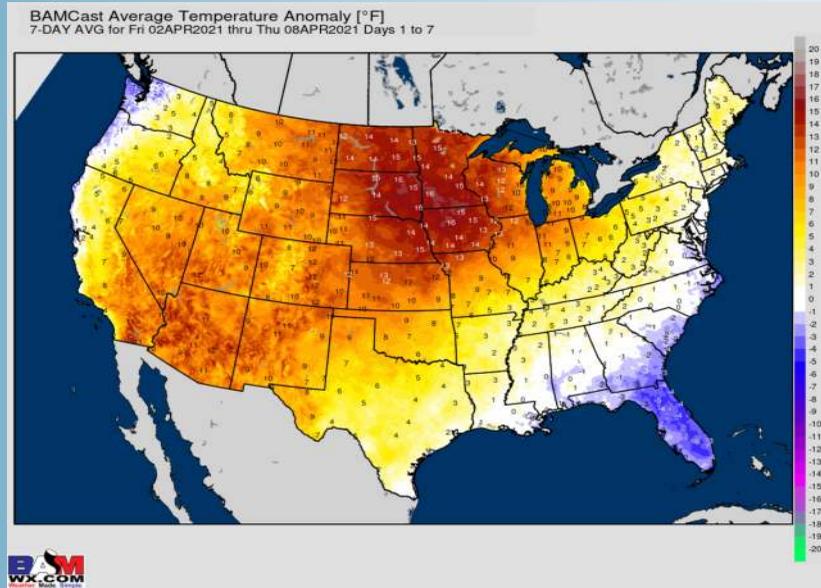

High Temperatures Monday

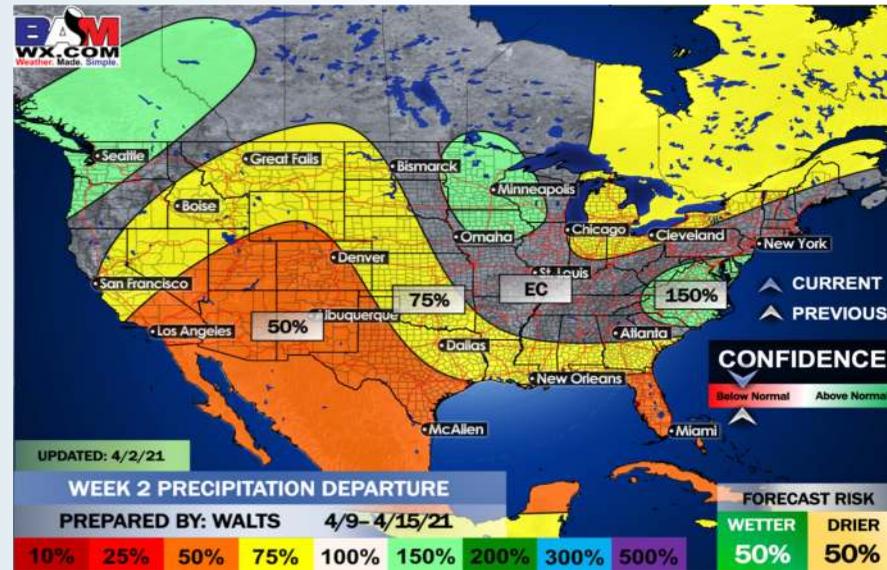

Long-Range Forecast Discussion

- Precipitation chances will be little to none over the next several days across the area. Temperatures will average out close to normal as a whole over the next week as well (but increasing each day going forward), but nothing notable.
- Precipitation looks to continue to stay below normal in the week 2 timeframe, temps are still anticipated to be slightly above normal as well.
- Expectations are for a below normal pattern for precipitation risk for the Houston area for weeks 3 + 4. Temperatures are anticipated to average out to near normal for this time frame.
