Short-Term Forecast Discussion

- After a brief lull in the precipitation here early this afternoon, rain chances will increase into the rest of the afternoon and evening. Keeping an eye in particular on the 10 PM – 1 AM timeframe for a few locally strong to potentially severe storms to move through the area. Moderate to at times heavy rain will be possible, as well as briefly stronger winds. Pockets of hail cannot be ruled out, but would be rather isolated if that threat materializes.
- Expecting a more Easterly wind to persist out through about ~4 PM when a more Southeasterly wind is favored for the rest of the day. Sustained winds of 15-20 with gusts to 20-25 MPH expected. Any stronger storms late tonight do hold the potential for locally stronger winds.
- Lows tonight drop back into the upper 60s/lower 70s
- *No fog expected, but reduced visibility will continue to be possible as long as precip is around the area*

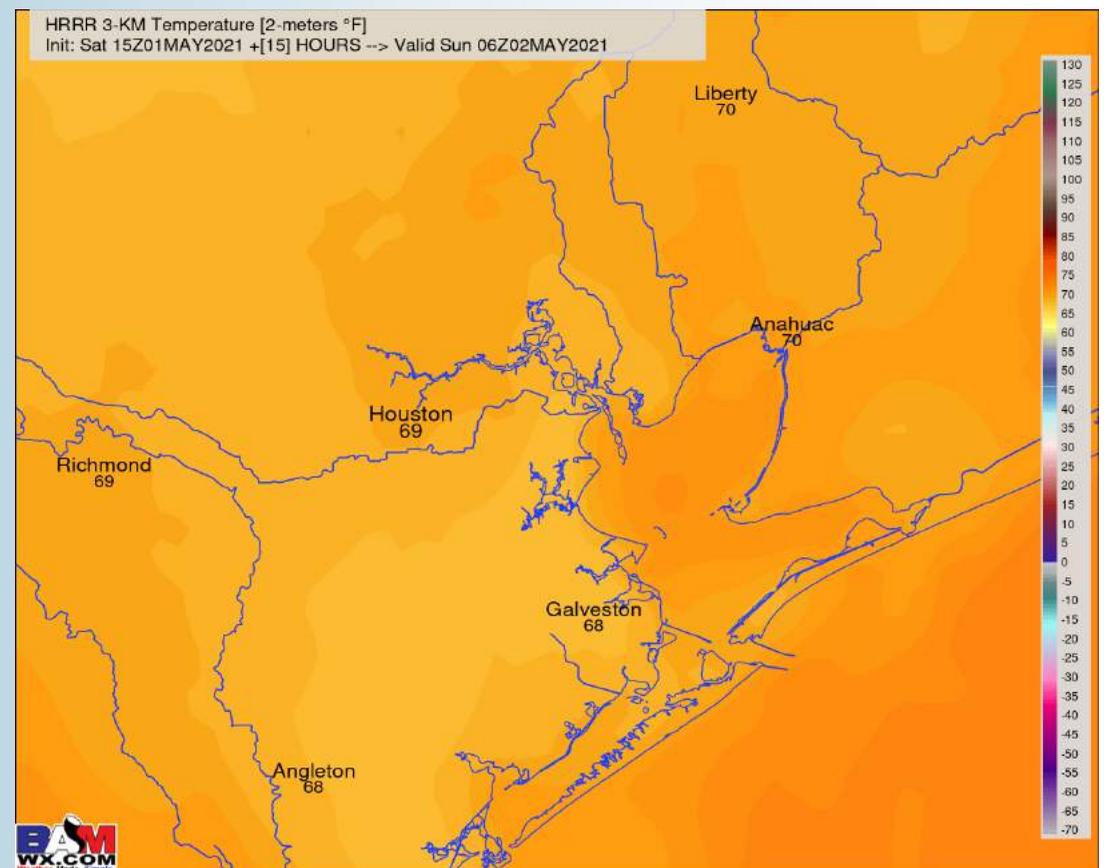

Sustained Winds (11 PM CT)

Simulated Radar Snapshot (10 PM CT)

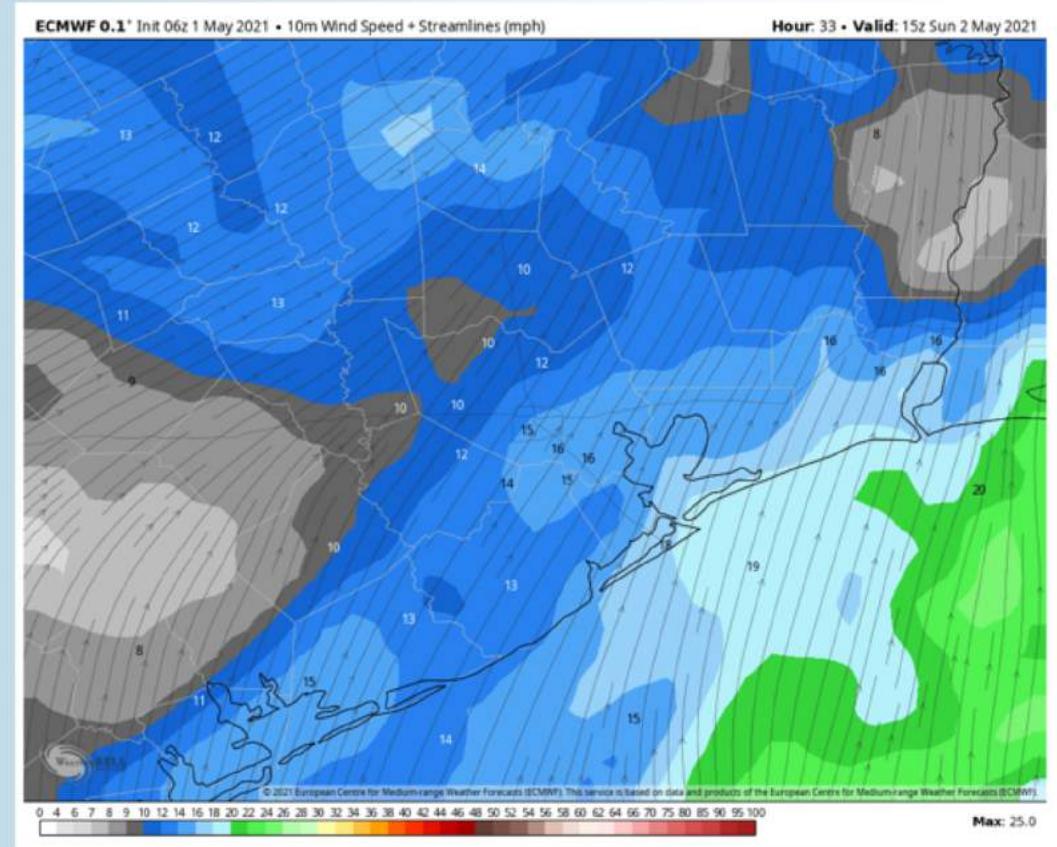

Low Temps This Evening

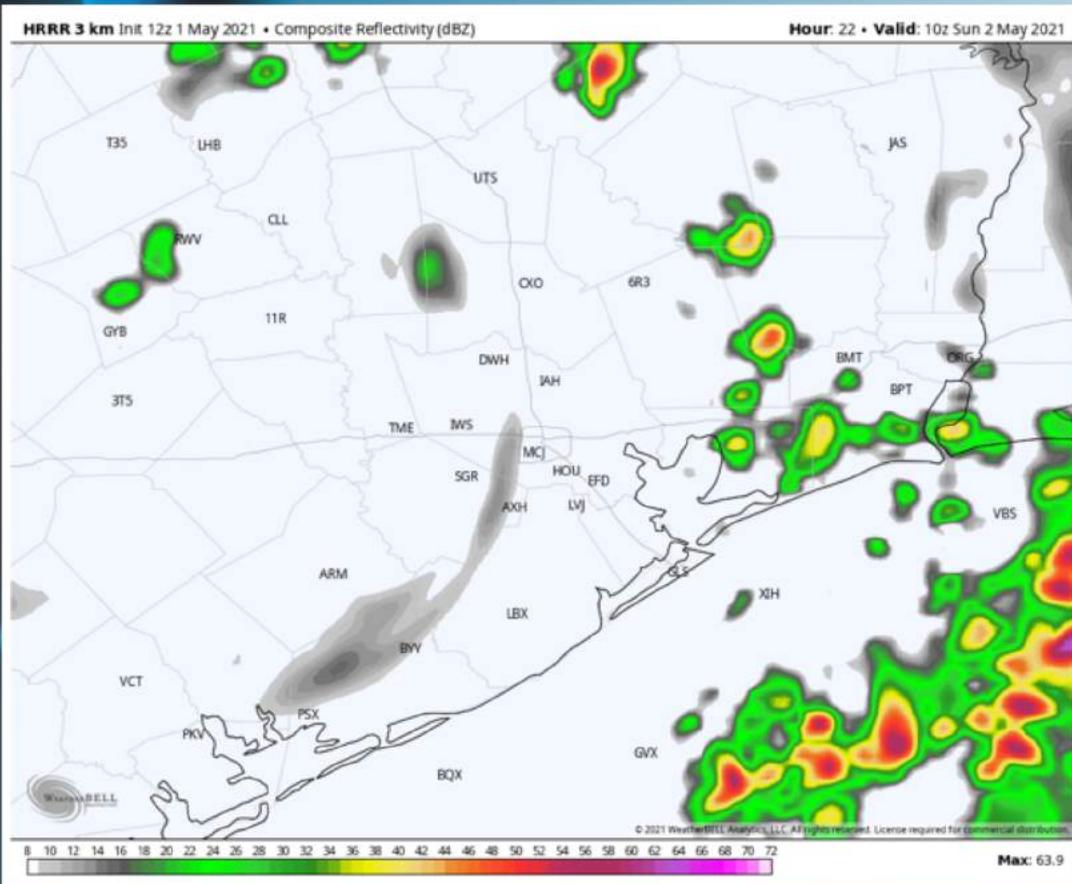

Short-Term Forecast Discussion

- **Rain chances will be winding down throughout the AM hours setting up for mostly dry conditions in the PM hours. An iso shower/ storm cant be ruled out around through 4 PM.**
- **Winds Sunday will be coming more out of the S/ SW at 13-18 MPH with gusts around 25 MPH possible.**
- **High Temps will be sitting in the upper 70s / lower 80s on Sunday over open waters.**
- ***No fog expected Sunday***

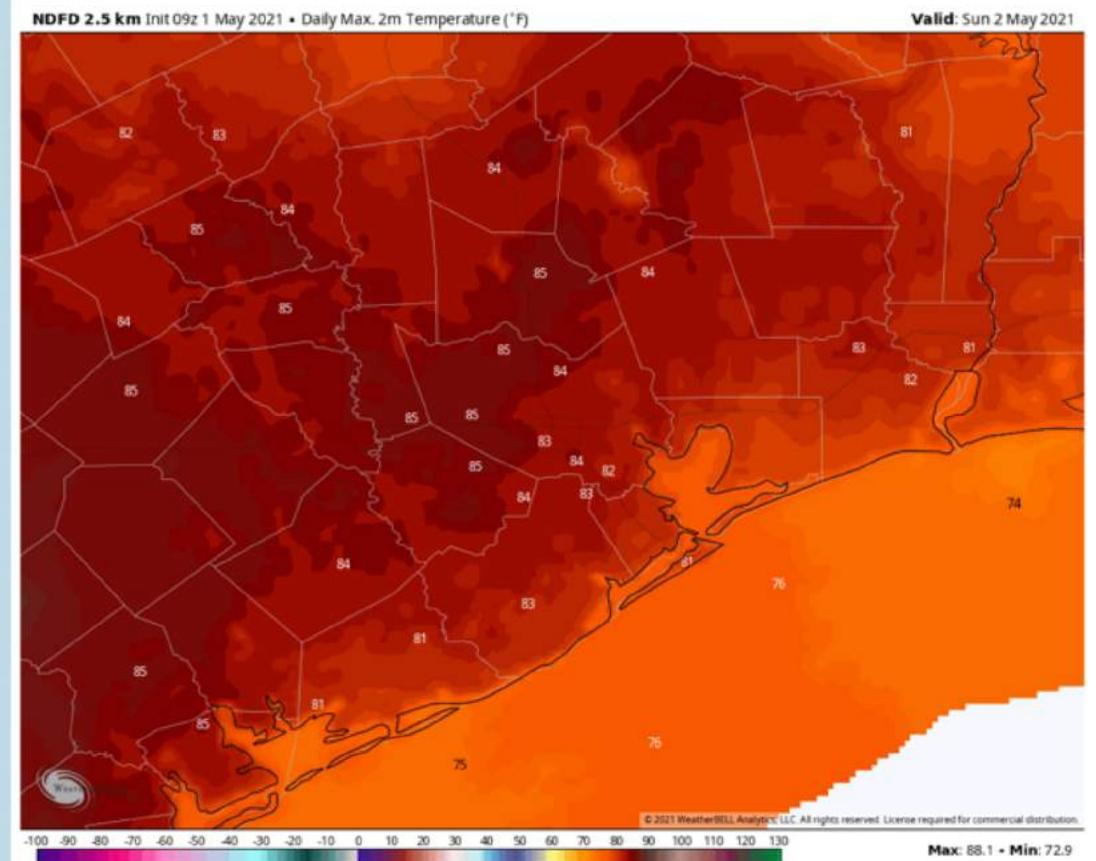

Sustained Winds (10 AM CT)

Simulated Radar Snapshot (5 AM CT)

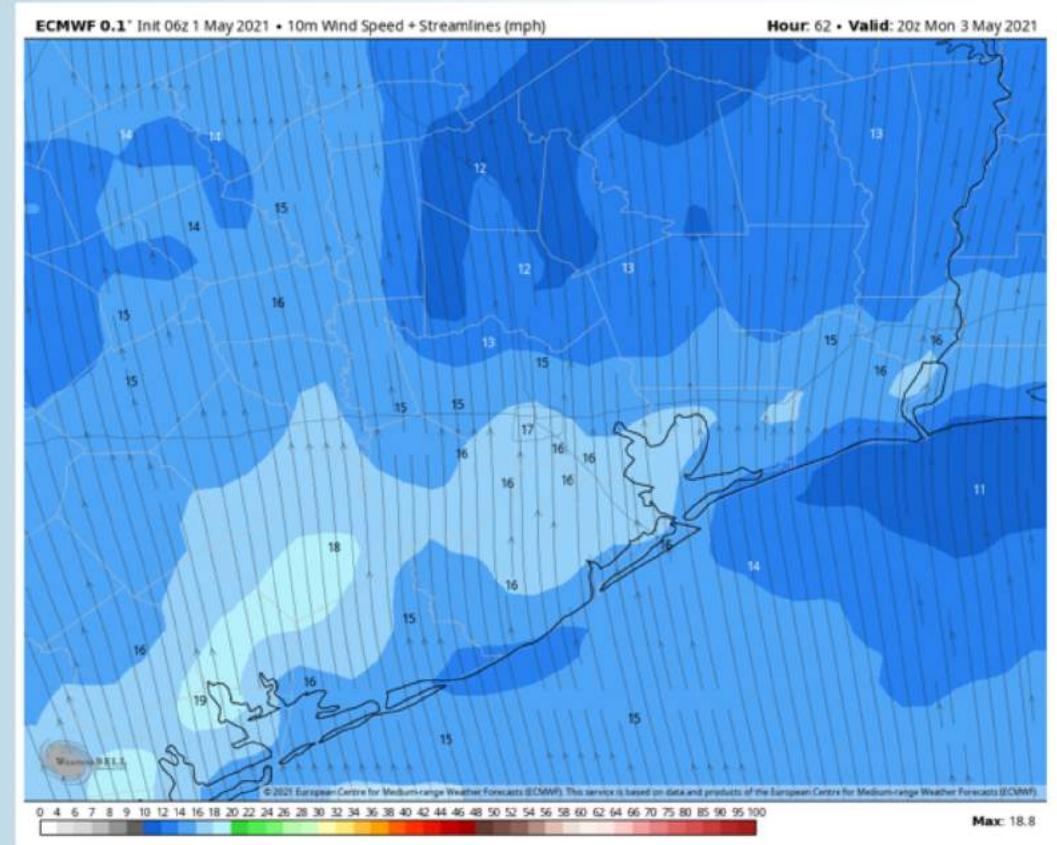

High Temps Sunday

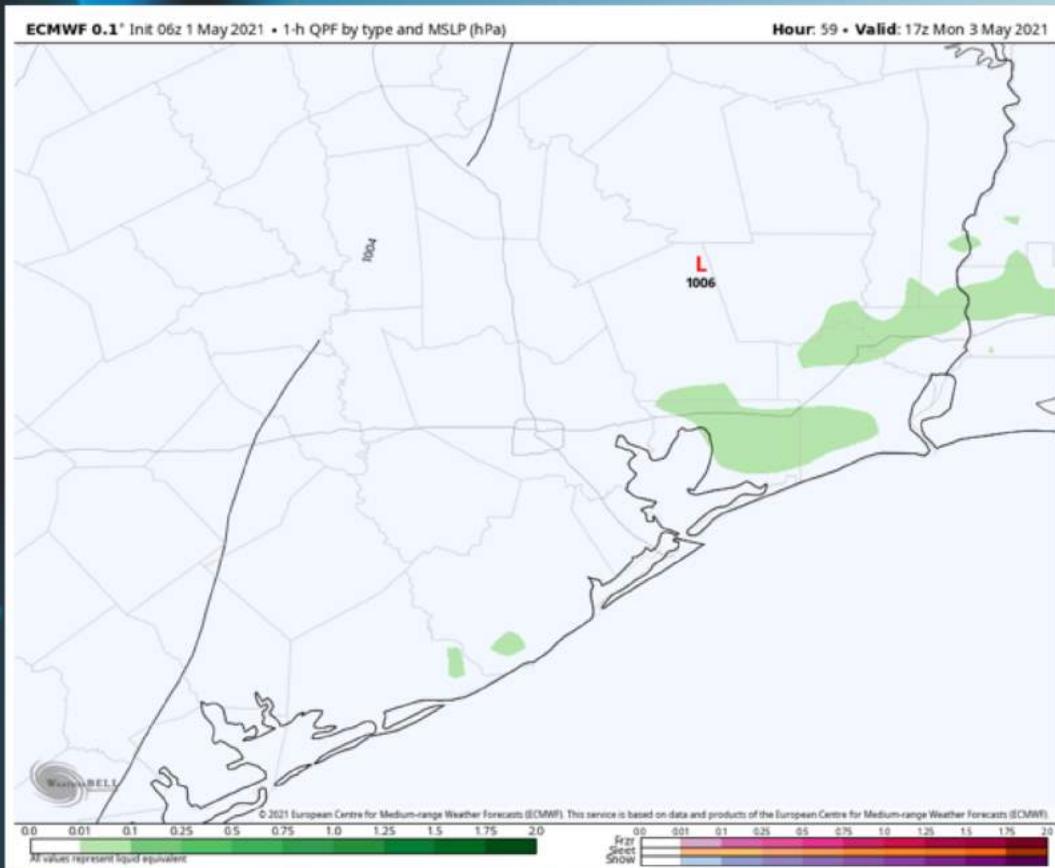

Short-Term Forecast Discussion

- Monday will feature much drier weather than what we've seen over the past few days across the area. Still, spotty chances cant be ruled out in the early afternoon hours. At this distance, any precip looks to be light and isolated-to-scattered in nature.
- Monday's wind will continue coming out of the S, 13-18 MPH with gusts to 18-23 MPH
- High Temperatures in the lower 80's F will be possible over open waters on Monday. Temperatures into the lower 90's will be possible further inland.
- *No fog expected Monday.*

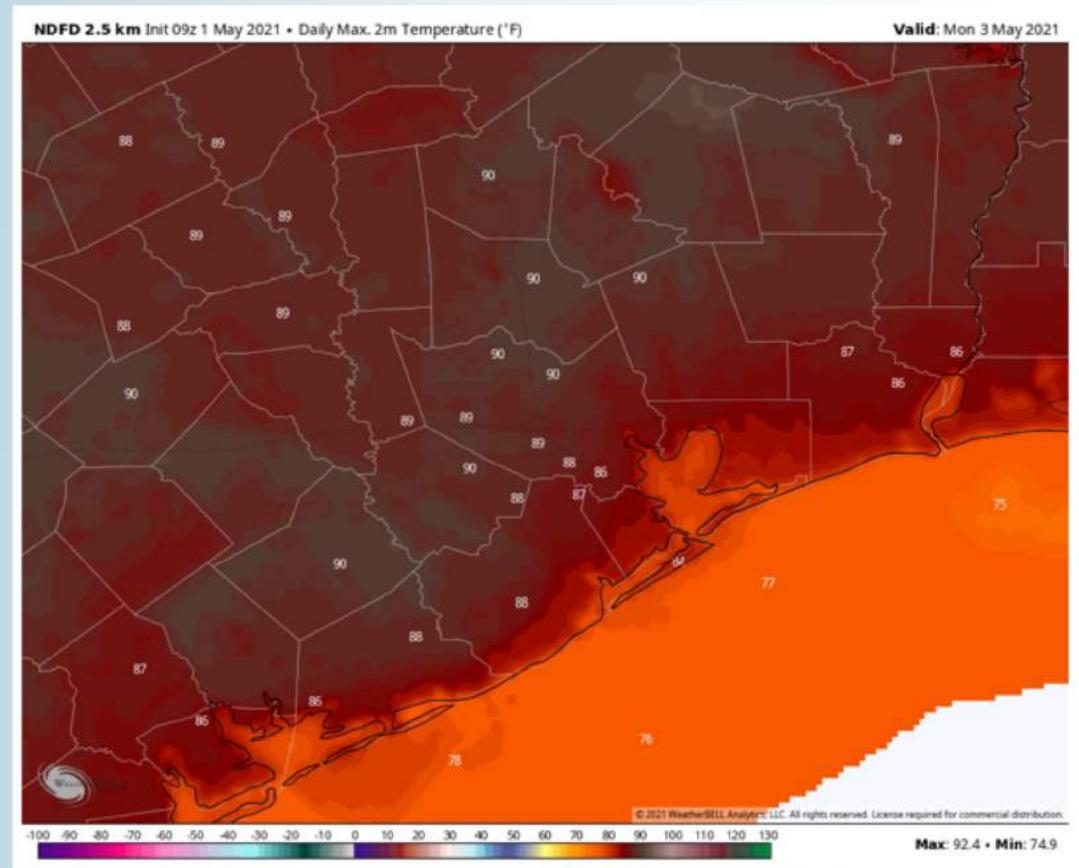

Sustained Winds (3 PM CT)

Simulated Radar Snapshot (12 PM CT)

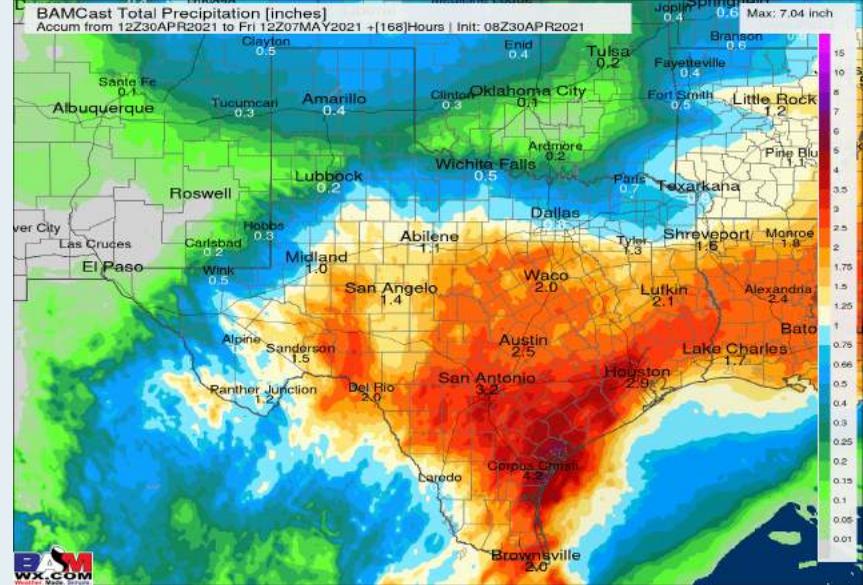

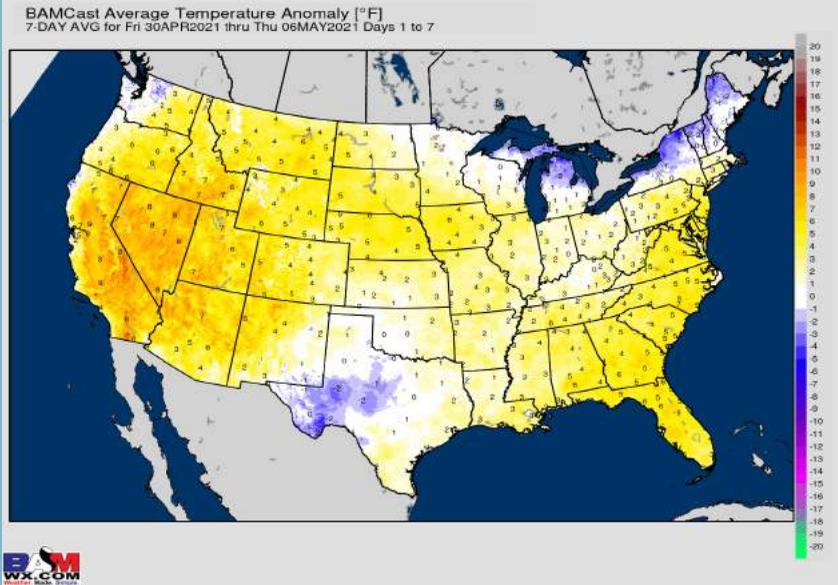

High Temps Monday

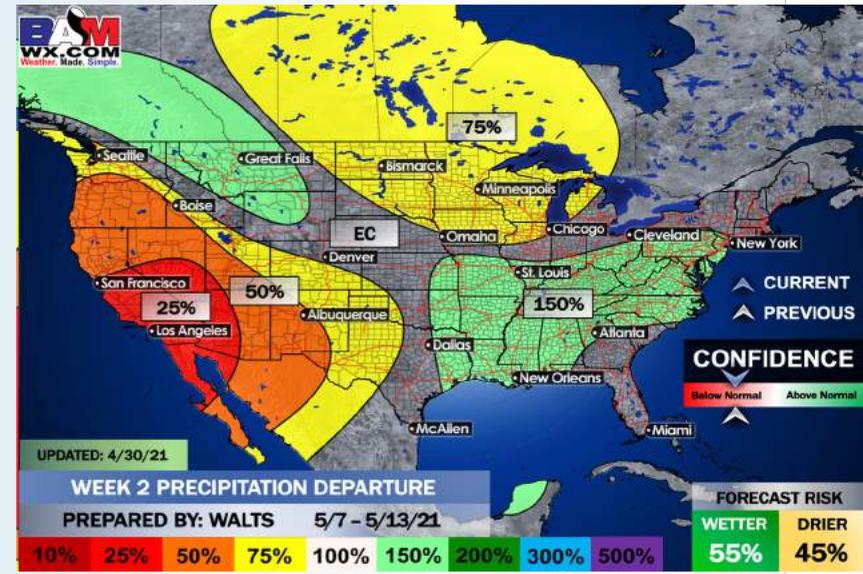

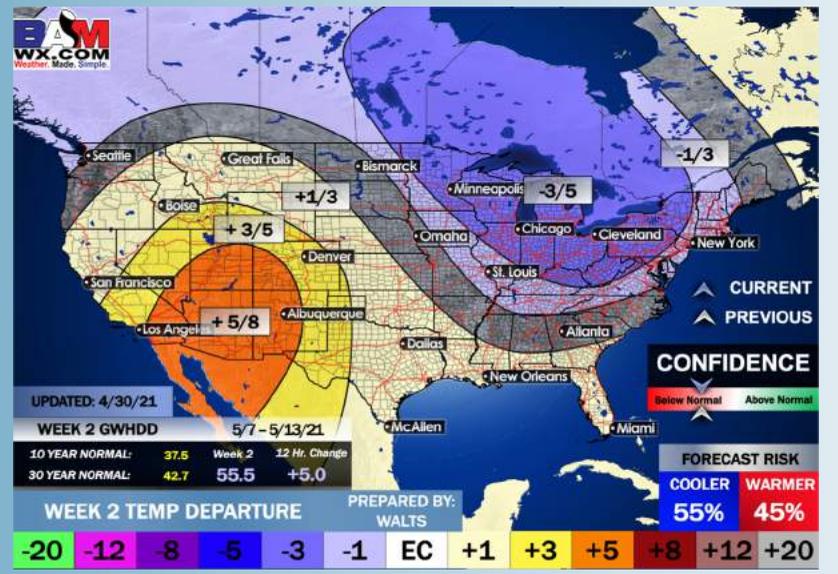

Long-Range Forecast Discussion

- Near normal temps with increased precipitation risks are favored over the next 7 days
- Working into Mid-May, we are favoring slightly above normal temps for this time of year and for precipitation to stay on the active side of things. Increased moisture risks likely continue across the Southern US
- The weeks ³/₄ (Mid/Late May) period likely features more normal conditions for SE TX. Temps and precipitation are favored to be near normal for this time of year
