Short-Term Forecast Discussion

- Expecting drier weather the rest of today
 - Latest favored winds are 5-10 MPH sustained with a few gusts to 10-15 MPH coming from the NE. There looks to be a brief period of winds right along the coast that come more SE in the 7-11 PM window
 - Low temps into tomorrow morning are looking to sit in the lower 70s across the area, cooler inland
 - *No fog expected.*

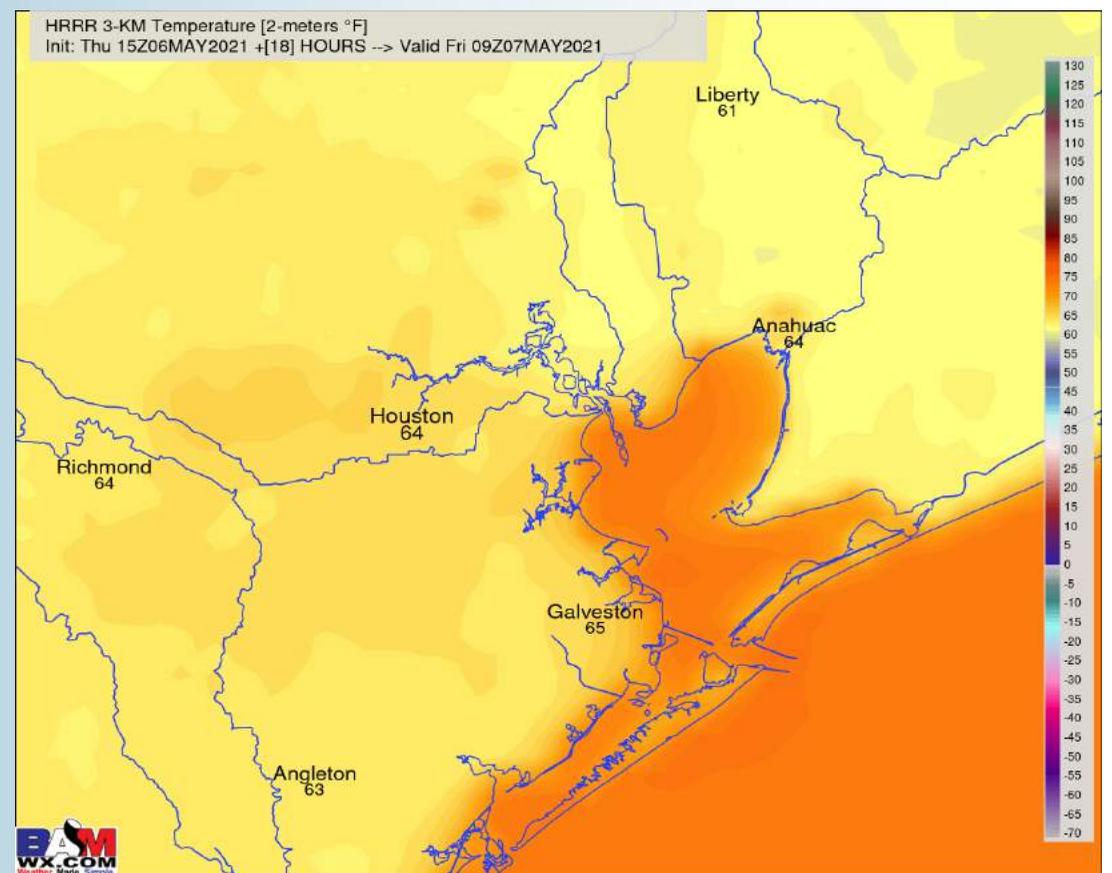

Sustained Winds (10 PM CT)

Simulated Radar Snapshot (8 PM CT)

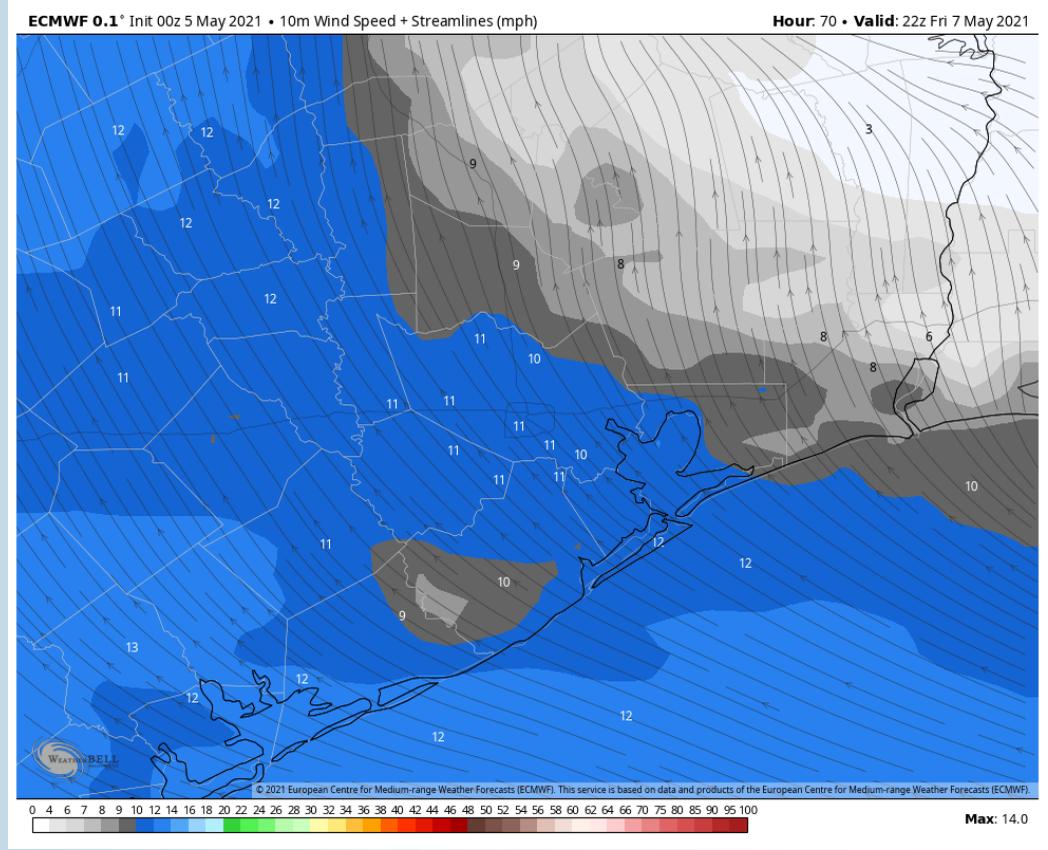

Low Temps this Evening

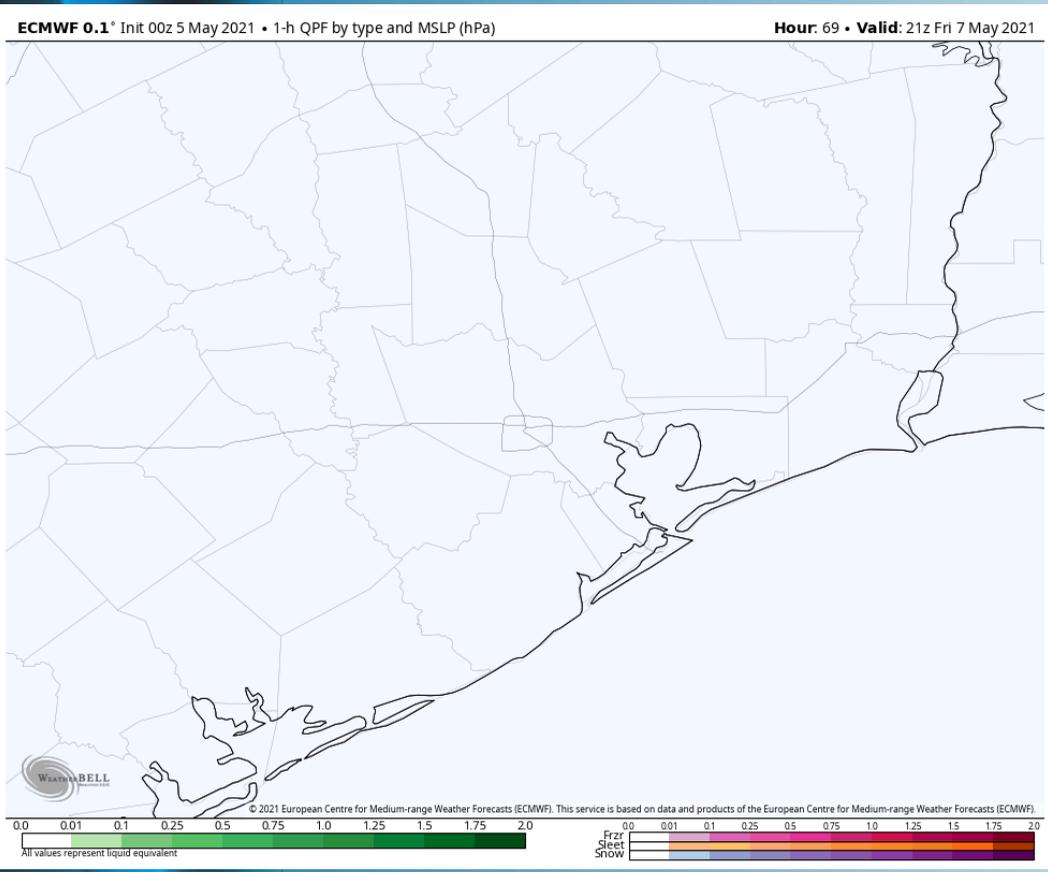

Short-Term Forecast Discussion

- Friday is anticipated to be dry as well
 - Winds Friday will shift NE to SE during the day, NE for much of the morning at 8-13 MPH, Easterly by Noon, and then more Southeasterly by mid-afternoon
- Highs Friday will continue to stay in the upper 70s with the warmest overall temps over land
 - **No fog expected Friday**

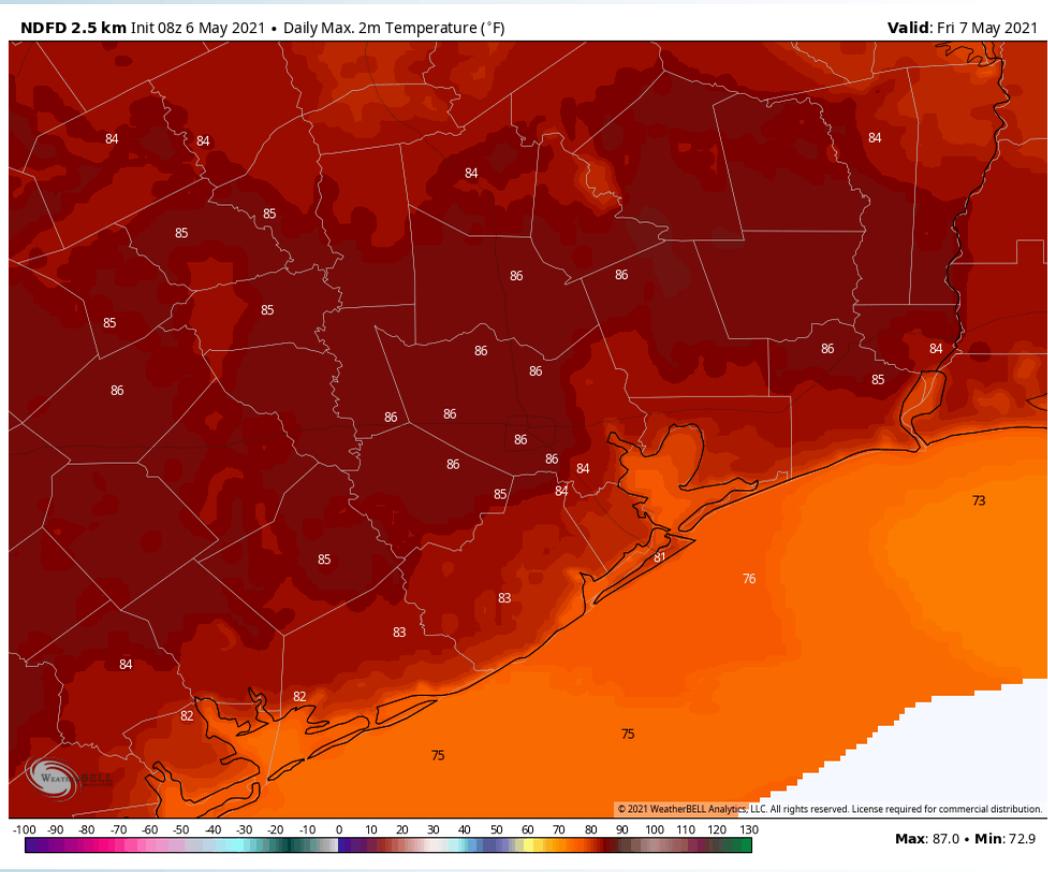

Sustained Winds (6 PM CT)

Simulated Radar Snapshot (4 PM CT)

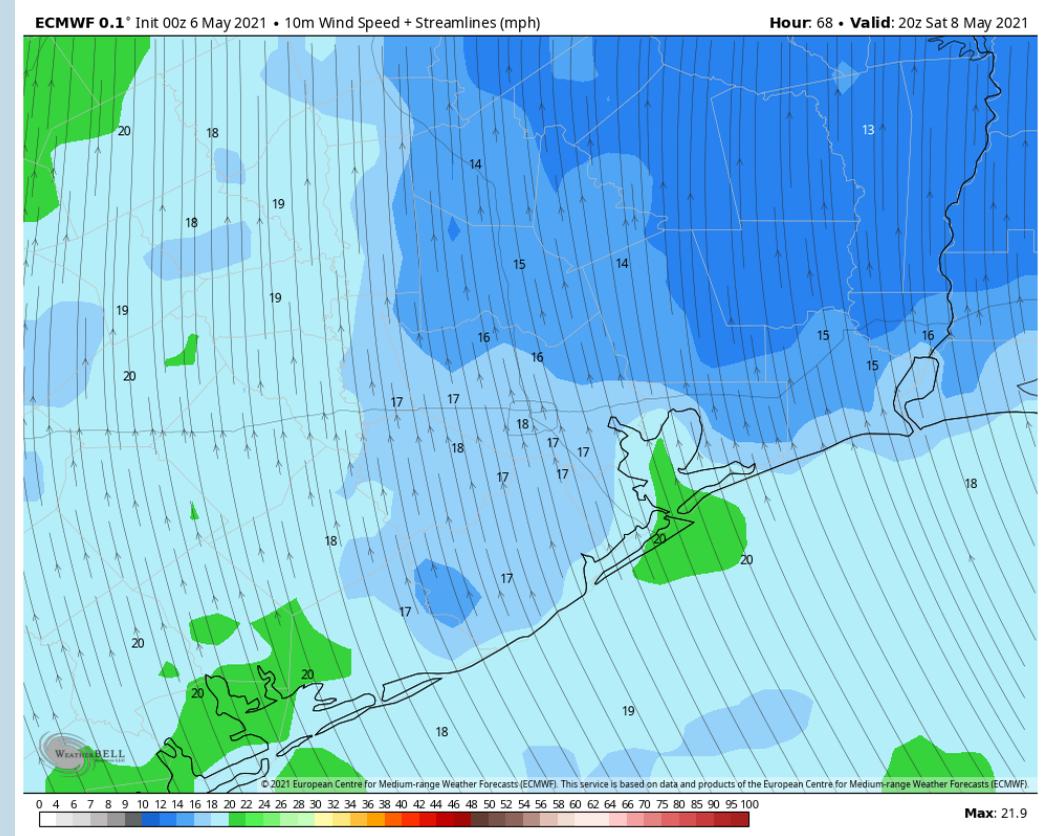

High Temperatures Friday

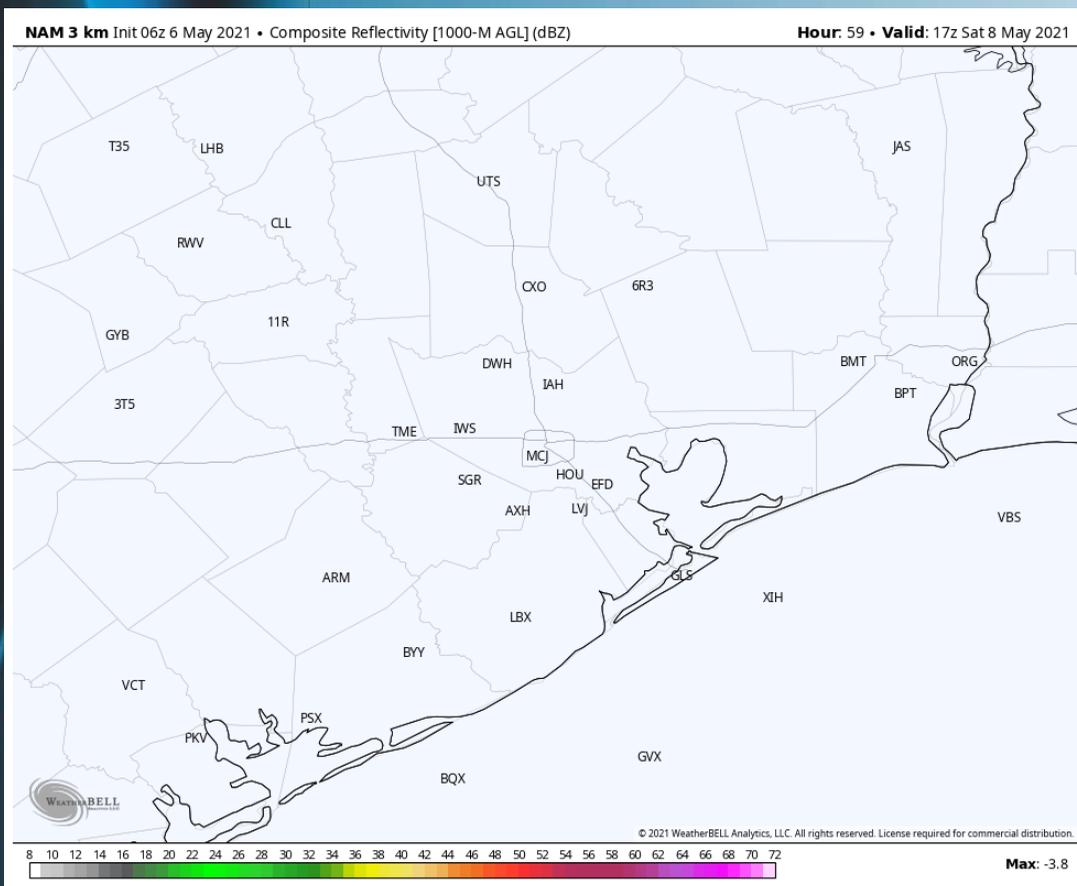

Short-Term Forecast Discussion

- **Saturday looks to stay precipitation free.**
- **Winds are looking to come from the SE and increased- sustained 15-20 MPH with gusts 20-25 MPH**
- **Saturday will continue our theme of temps in the upper 70s**
- ***No fog expected Saturday.***

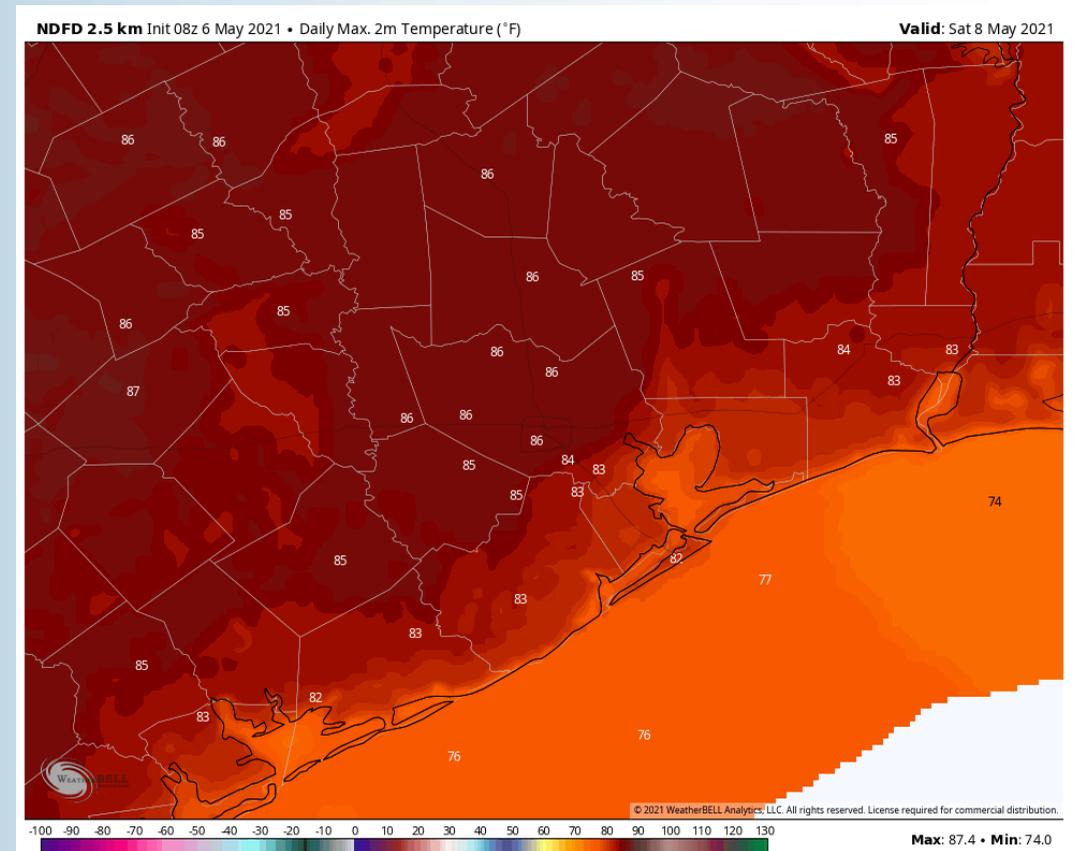

Sustained Winds (4 PM CT)

Simulated Radar Snapshot (12 PM CT)

High Temperatures Saturday

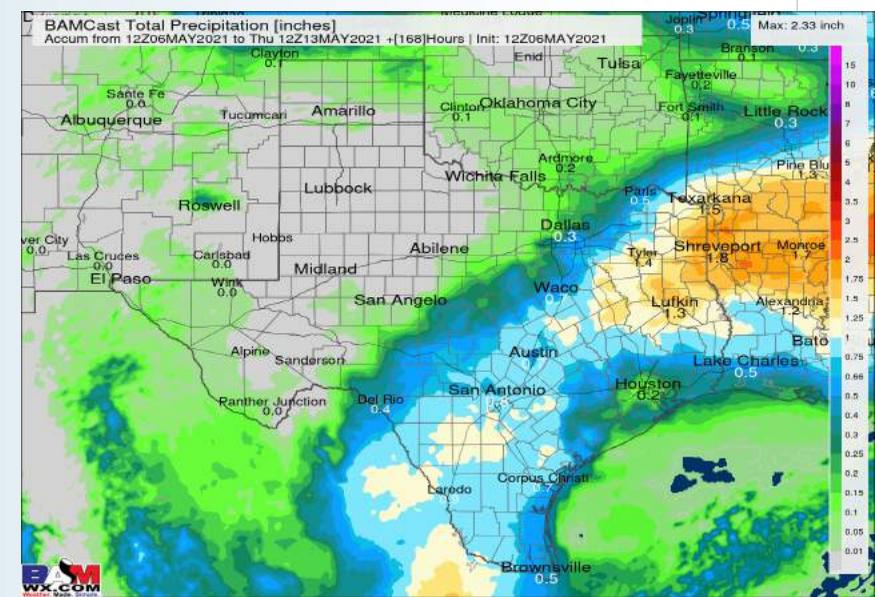

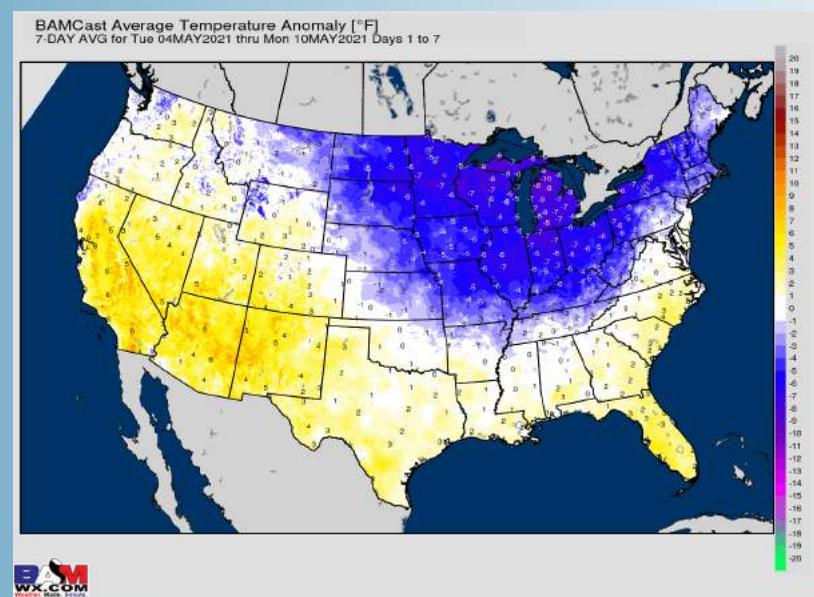

Long-Range Forecast Discussion

- Near normal temps expected over the next week, moisture risks look rather limited and further off to the northeast for the next few days.

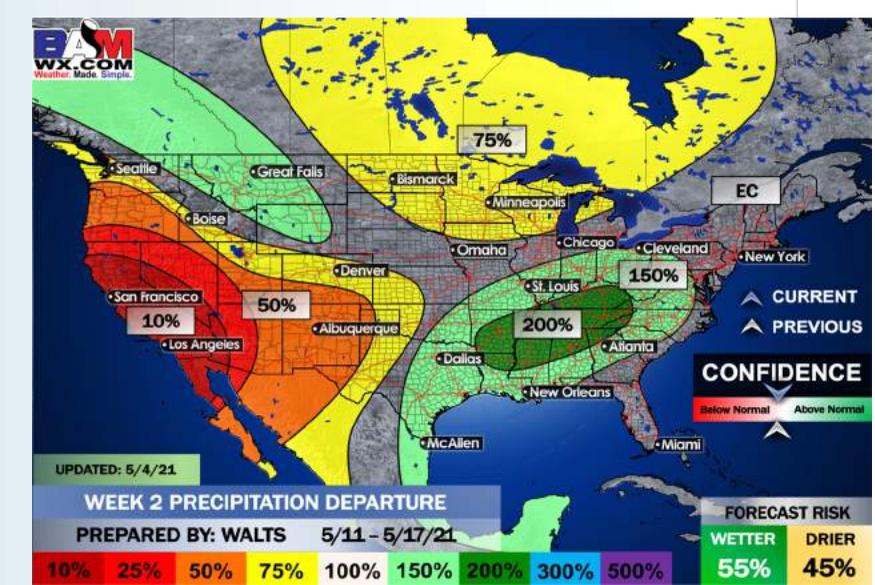

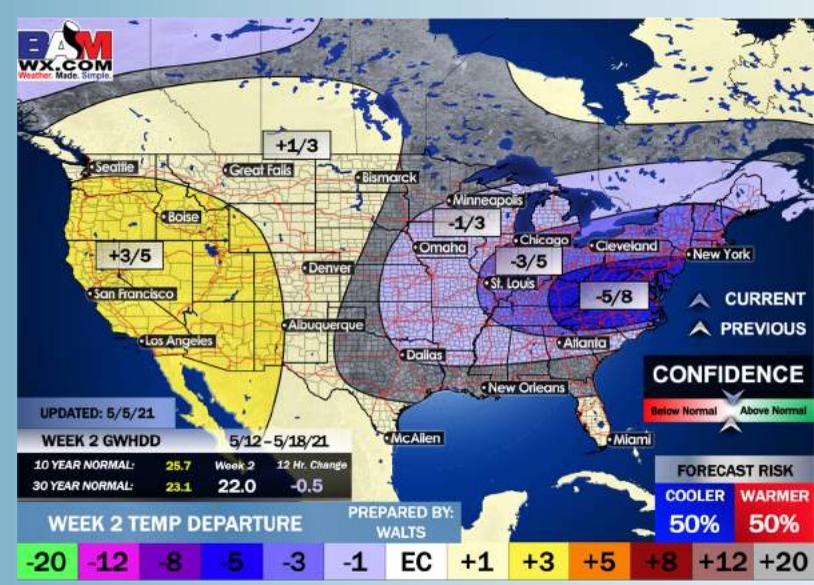

- Working into Mid-May, we are favoring near normal temps for this time of year and for precipitation to stay on the active side of things. Increased moisture risks likely continue across the Southern US.

- The weeks ³/₄ (Mid/Late May) period likely features more above normal temperatures and above normal moisture, similar to our current week 2 thoughts.
