Short-Term Forecast Discussion

- While we continue to favor drier weather for most of the day today, beginning around ~10 AM a few very isolated showers will be possible. With that said, we are expecting things to stay incredibly isolated and chances no greater than 10-20% at any given time. An isolated rumble of thunder cannot be ruled out, but the duration of any cells would be rather short lived as best overall precip setup is to our north
- Winds today look to be coming out of the S, sustained 15-20 MPH with gusts 23-28 MPH. Winds before ~10 AM winds look to be slightly higher at the boarding station, sustained 18-23 MPH
- Today's temps will be in the lower 80s
 - *No fog expected today*

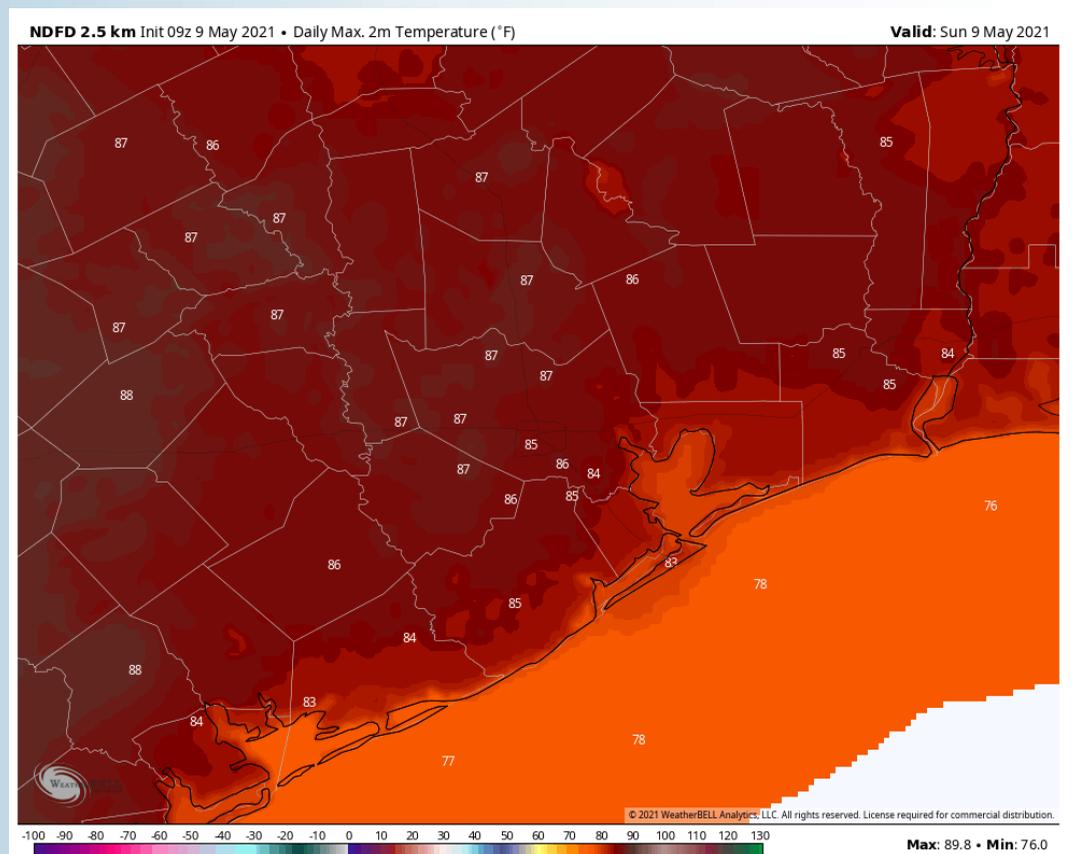

Sustained Winds (6 PM CT)

Simulated Radar Snapshot (11 AM CT)

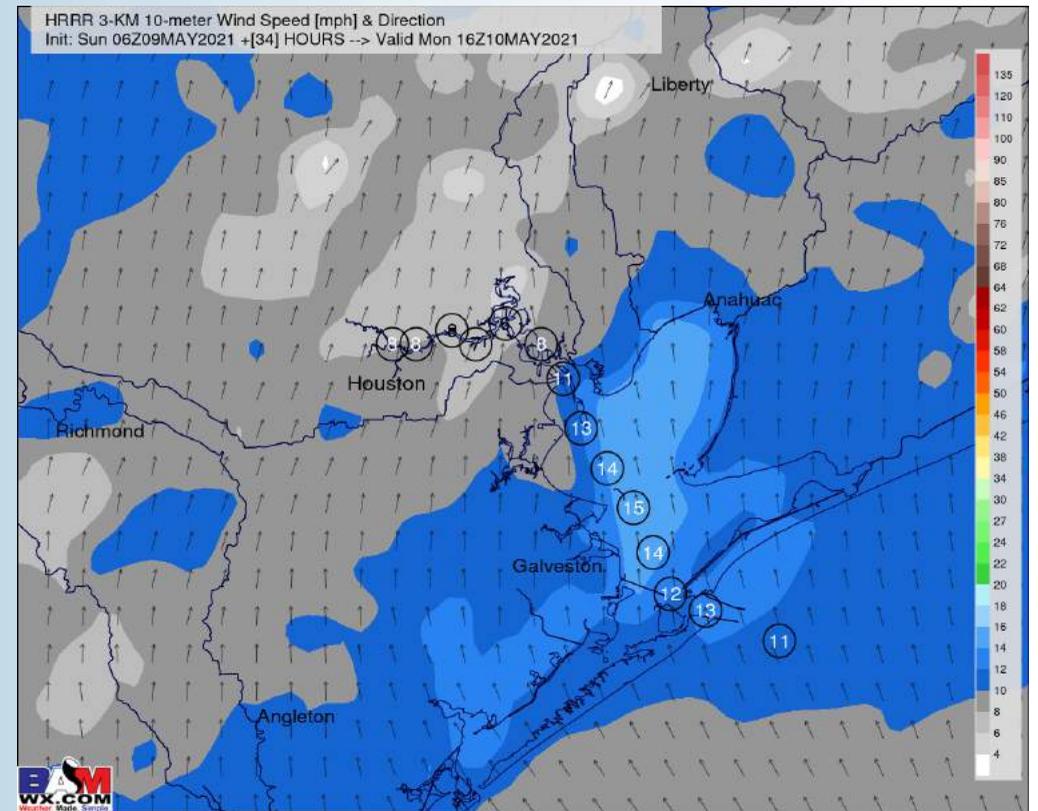

High Temps Today

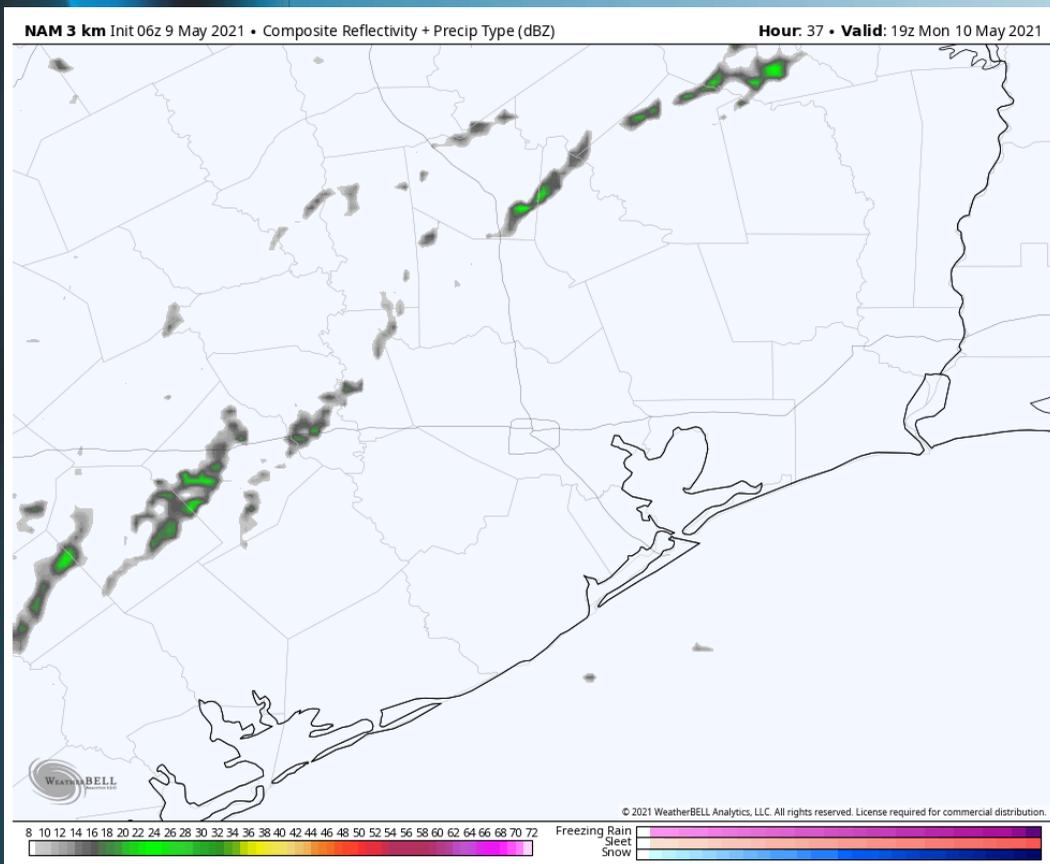

Short-Term Forecast Discussion

- Currently favoring Monday to be dry with any precipitation to stay mainly north of our stations
- Winds late Sunday night into early Monday morning will gradually calm, becoming sustained closer to 8-13 MPH with gusts 13-18 MPH. Winds will be primarily coming from the S
- Monday's temps look to top out in the lower 80s
 - *No fog expected Monday*

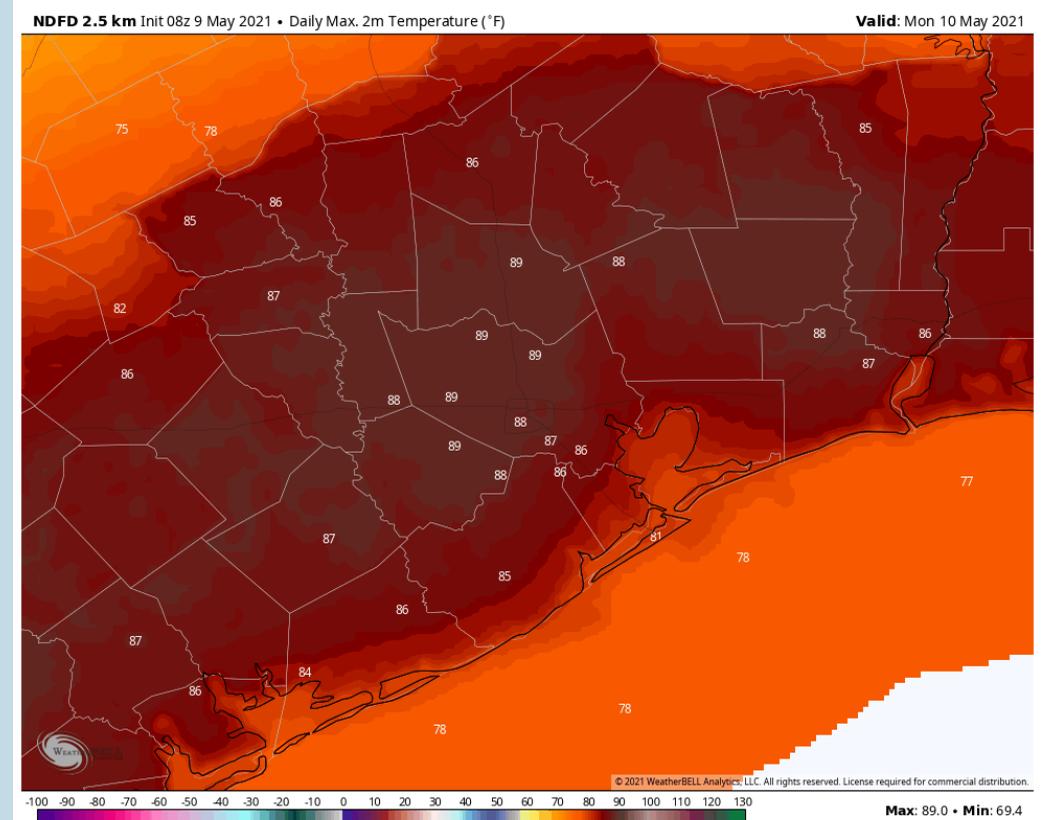

Sustained Winds (12 PM CT)

Simulated Radar Snapshot (2 PM CT)

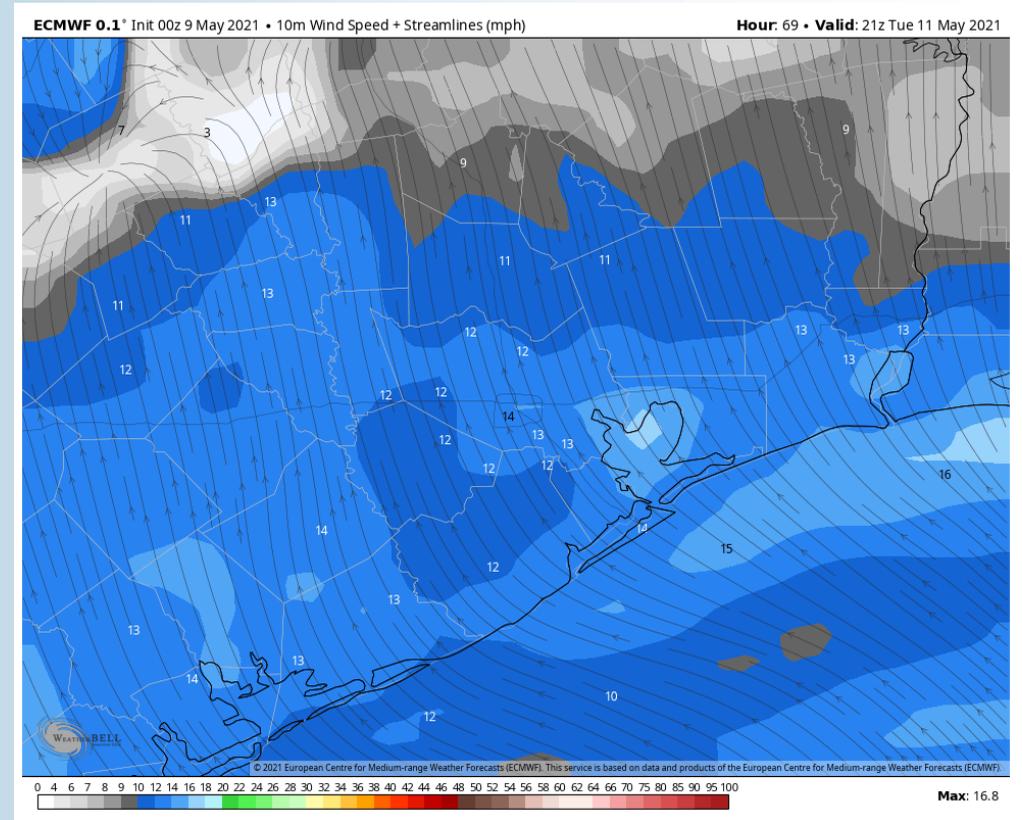

High Temps Monday

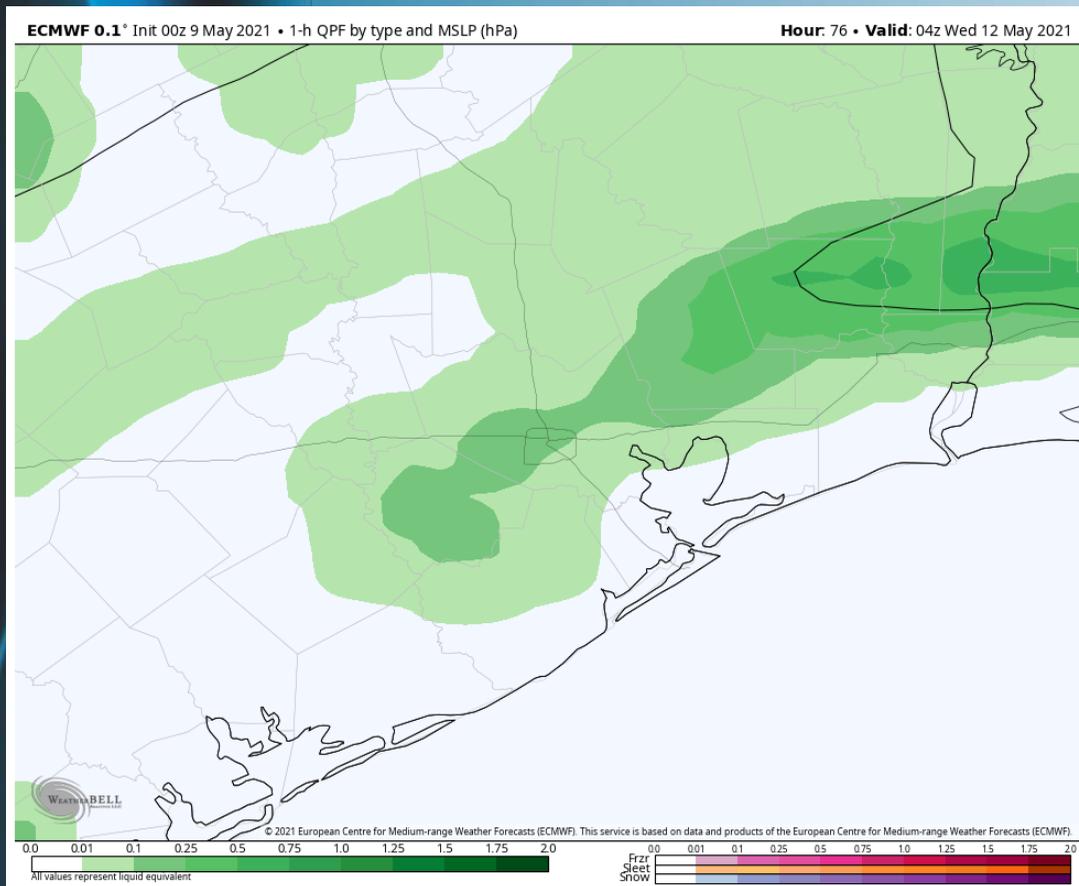

Short-Term Forecast Discussion

- While much of the daytime hours on Tuesday will be quiet, we are watching the late evening hours for an increase in precipitation- currently favoring beyond sundown. This precip is associated with our next front that will work through on Wednesday
- Winds will continue coming from the South on Tuesday, sustained 8-13 MPH with gusts 13-18 MPH possible. Winds look to be shifting direction Wednesday with the next mentioned front
- Tuesday's high temps will be a bit cooler inland, but still sitting in the lower 80s for most stations
 - *No fog expected Tuesday*

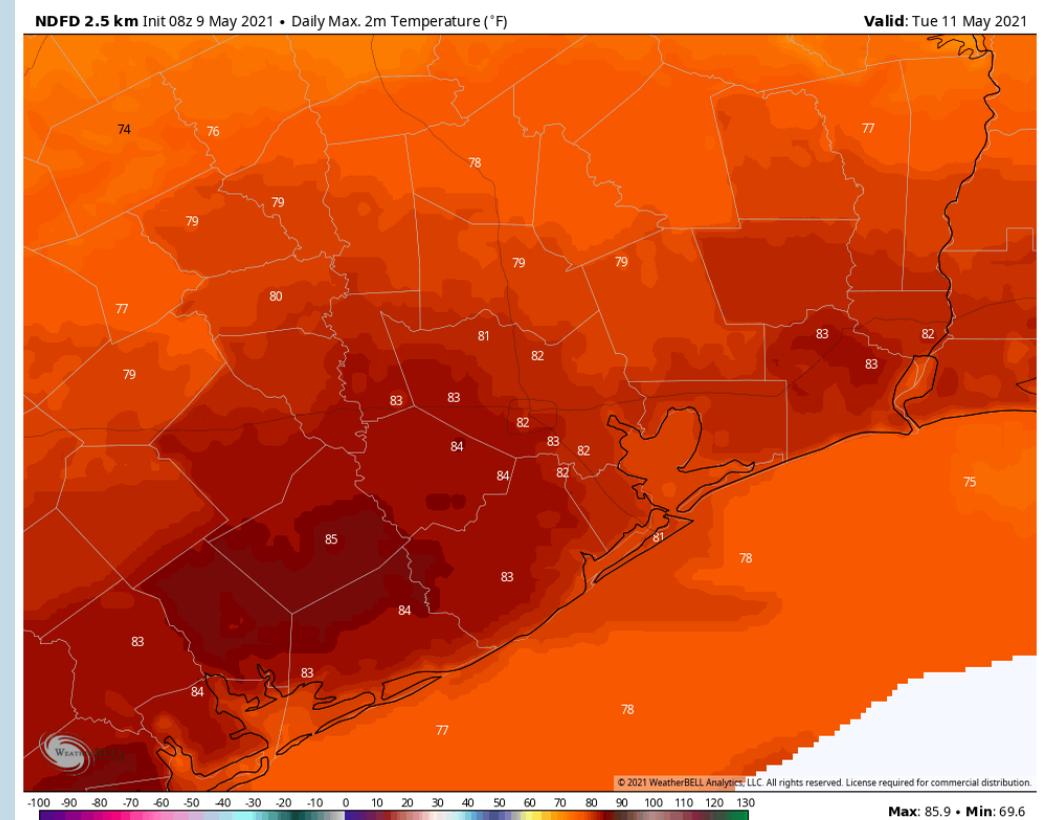

Sustained Winds (4 PM CT)

Simulated Radar Snapshot (10 PM CT)

High Temps Tuesday

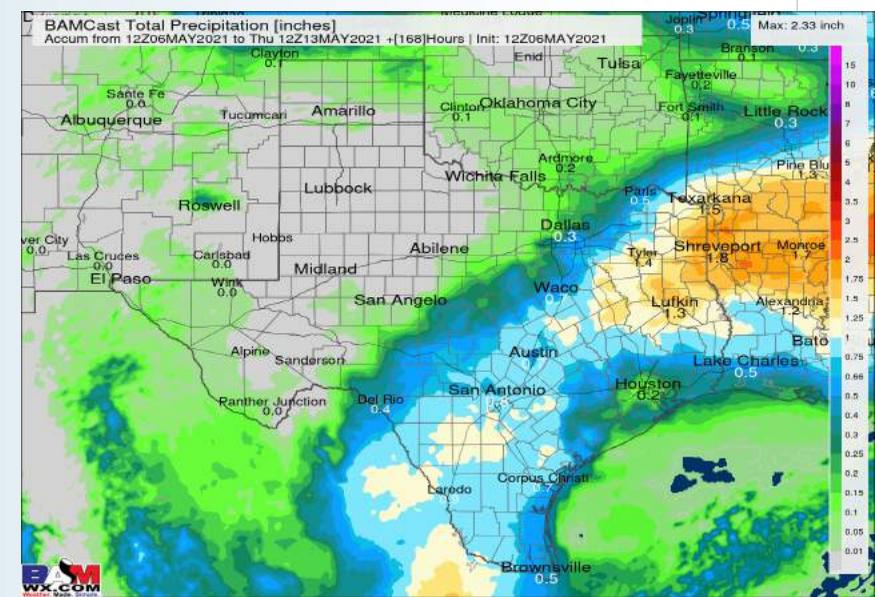

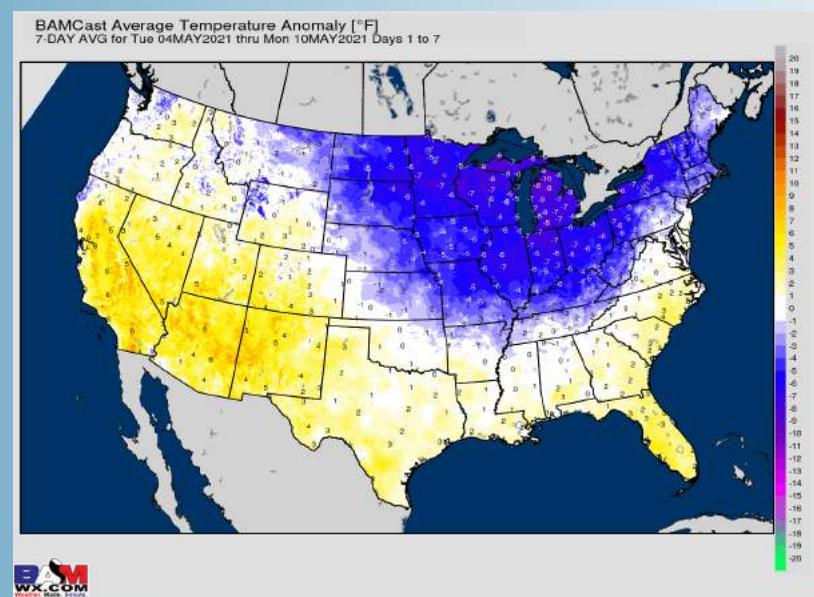

Long-Range Forecast Discussion

- Near normal temps expected over the next week, moisture risks look rather limited and further off to the northeast for the next few days.

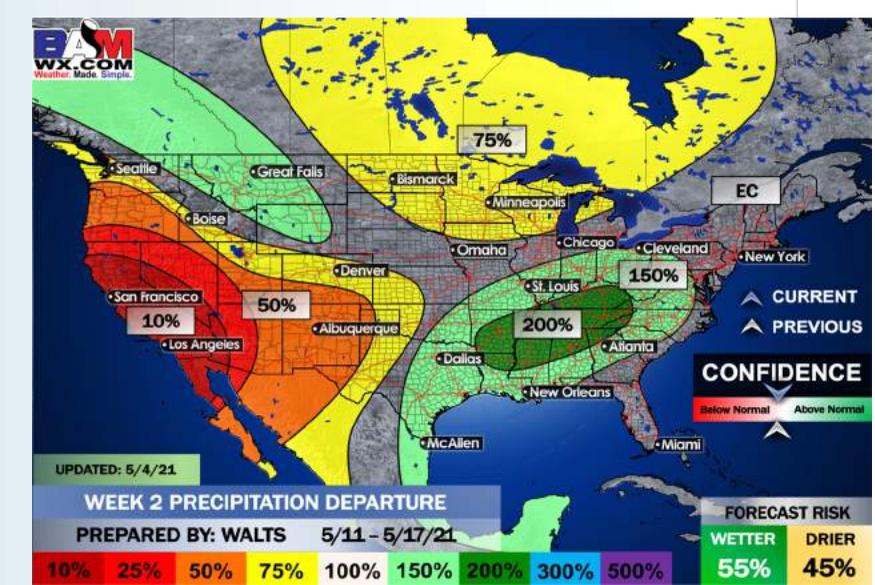

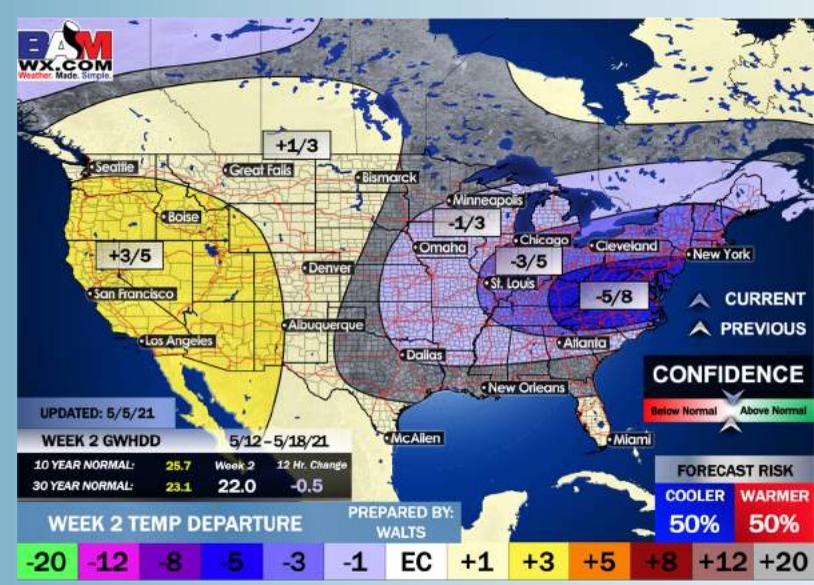

- Working into Mid-May, we are favoring near normal temps for this time of year and for precipitation to stay on the active side of things. Increased moisture risks likely continue across the Southern US.

- The weeks ³/₄ (Mid/Late May) period likely features more above normal temperatures and above normal moisture, similar to our current week 2 thoughts.
