Short-Term Forecast Discussion

- Continuing to favor less than a 10% chance of an iso shower today, favor the majority of the day to be dry
- Winds will continue out of the SSE at ~8-13 MPH sustained. A brief period after sundown (8-11 PM) may feature locally elevated winds for a few hours at 10-15 MPH before returning back to 8-13 MPH into the overnight.
- Highs will once again be in the lower 80s, much warmer inland.
 - *No fog expected today.*

Sustained Winds (7 PM CT)

Simulated Radar Snapshot (5 PM CT)

High Temperatures Today

Short-Term Forecast Discussion

- Much of the day Friday looks to stay dry with an isolated shower possible in a very hit and miss nature. Confidence later Friday night into the early Saturday AM hours is rather low as precip will ultimately hinge on how a cluster of precipitation in Central TX progresses. While we'd favor a broken line of showers late Friday night into our area, some guidance is much more aggressive- something we will fine tune heading forward.
- Winds will stay consistent into Friday, coming out of the SSE sustained at 8-13 MPH with gusts locally higher of 13-18 MPH.
- Temps will also stay rather consistent into Friday, near 80 over water with upper 80s closer to HOU metro.
 - *No fog expected Friday.*

Sustained Winds (4 PM CT)

Simulated Radar Snapshot (1 PM CT)

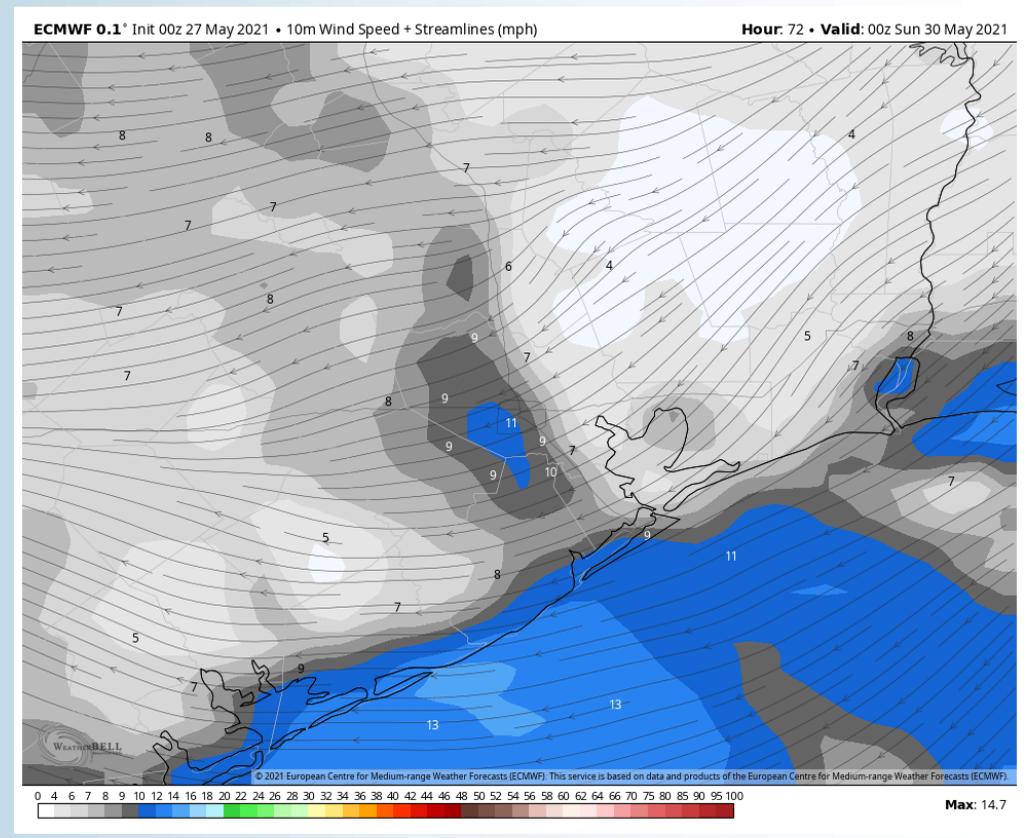

High Temperatures Friday

Short-Term Forecast Discussion

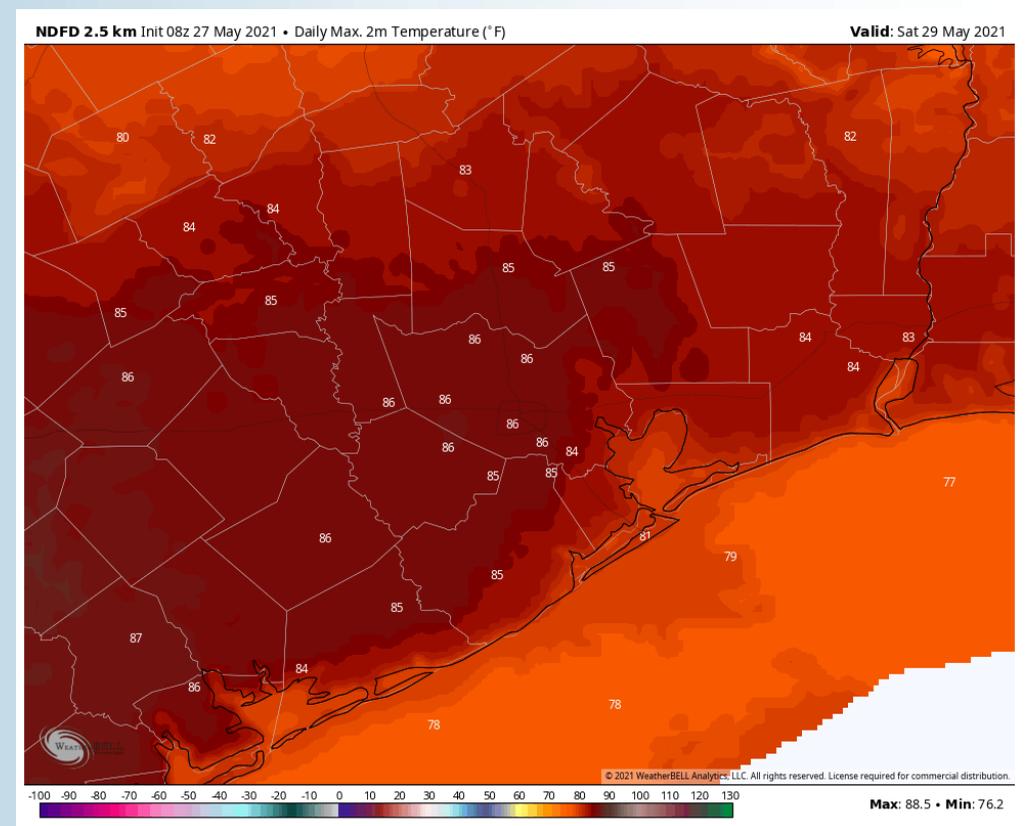

- Increased precip chances will work back into the picture on Saturday as upper level energy will work through the area and provide scattered rounds of showers and thunderstorms.
- Winds will start out rather calm and variable for the first half of Saturday, expecting a slight increase to 5-10 MPH with winds coming generally out of the NE for the afternoon hours.
- Upper 70s anticipated for the boarding station Sat., mid 80s closer to HOU metro
 - **No fog expected Saturday.**

Sustained Winds (7 PM CT)

Simulated Radar Snapshot (10 AM CT)

High Temperatures Saturday

Long-Range Forecast Discussion

- For the next 5-7 days, we favor temps to be right around average for this time of year and our active precip pattern will relax some as we head deeper into this week.

- Working into early June, we are favoring below normal temps for this time of year and for precipitation to stay on the active side of things. Increased moisture risks likely continue across the Southern US.

- The weeks 3/4 (early to mid June) period likely features more cooler than normal temperatures and above normal moisture, similar to our current week 2 thoughts.
