Tuesday, May 4th, 2021

Short-Term Forecast Discussion

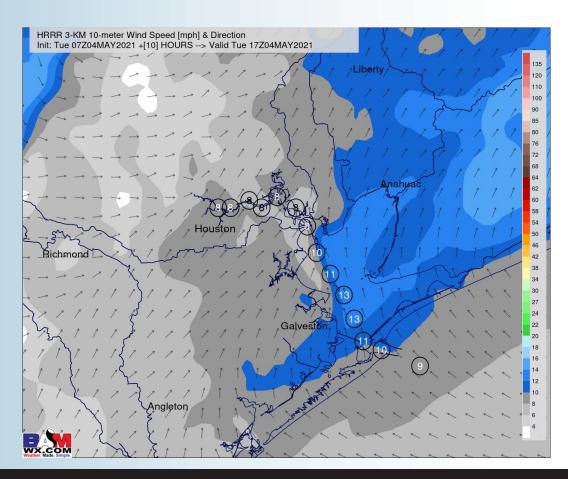

➤ A few isolated showers can't be ruled out this morning, but the better chance looks to come along a slow moving cold front from ~1-7pm from NW to SE. A few thunderstorms with lower visibility can't be ruled out, despite the chances for precipitation being rather scattered.

- Winds this morning look to continue to blow out of the S at 10-15 MPH sustained, gusting at times to 15-20 MPH. However, a gradual shift will occur in the winds after 2-3 PM today out of the N, dropping to around 5-10 MPH sustained as well.
- Highs will sit in the mid to upper 70s over open water, warmer in-land.
 - No fog expected tonight.

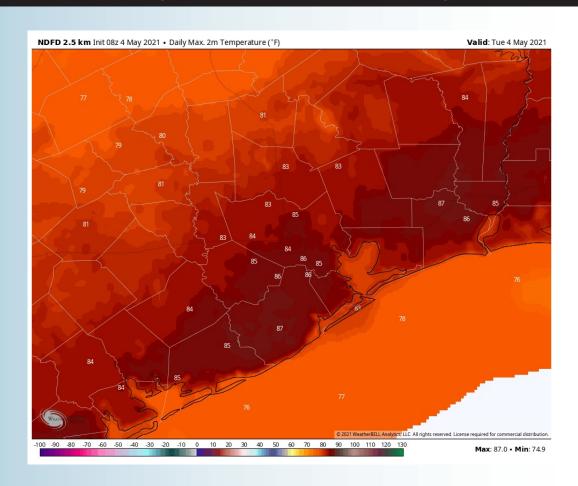

Simulated Radar Snapshot (4 PM CT)

Sustained Winds (12 PM CT)

High Temperatures Today

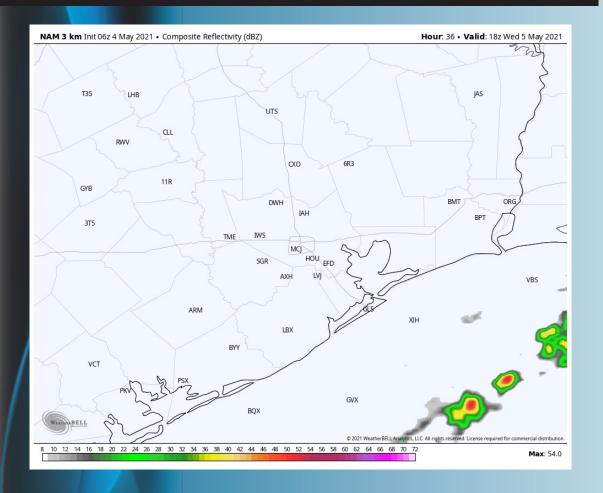

Wednesday, May 5th, 2021

Short-Term Forecast Discussion

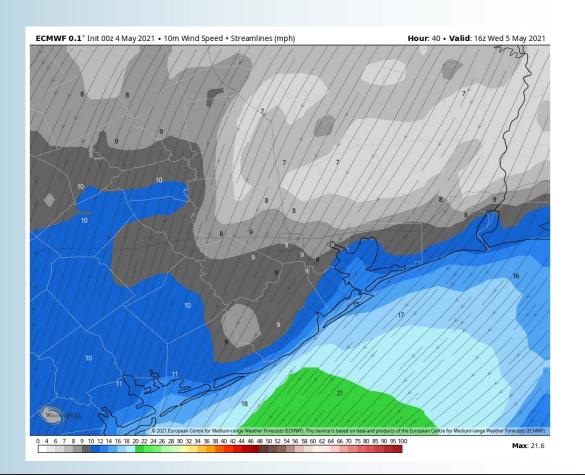

Wednesday is expected to be a dry day across the area.

- Winds Wednesday will start out 13-18 MPH sustained out of the N / NNE in the morning, decreasing to 5-10 MPH into the PM hours.
- Highs will sit in the mid 70s over the open water, slightly warmer in-land.
 - No fog expected Wednesday night.

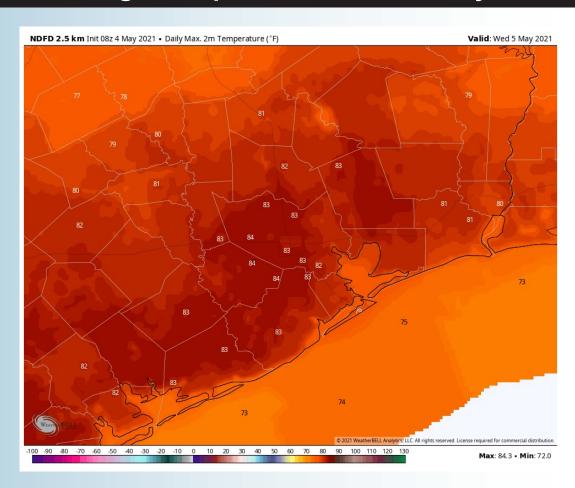

Simulated Radar Snapshot (1 PM CT)

Sustained Winds (11 AM CT)

High Temperatures Wednesday

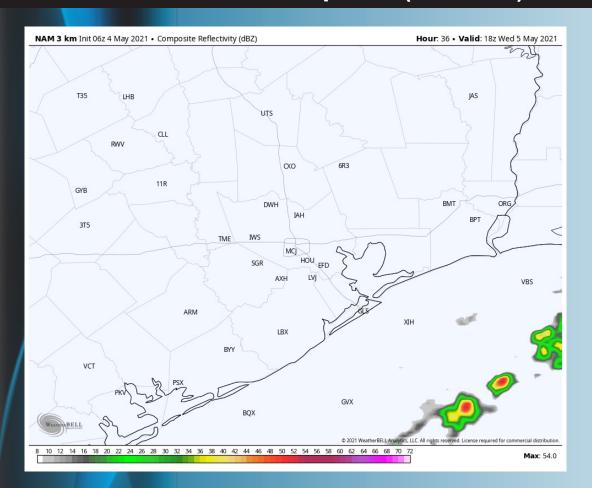

Short-Term Forecast Discussion

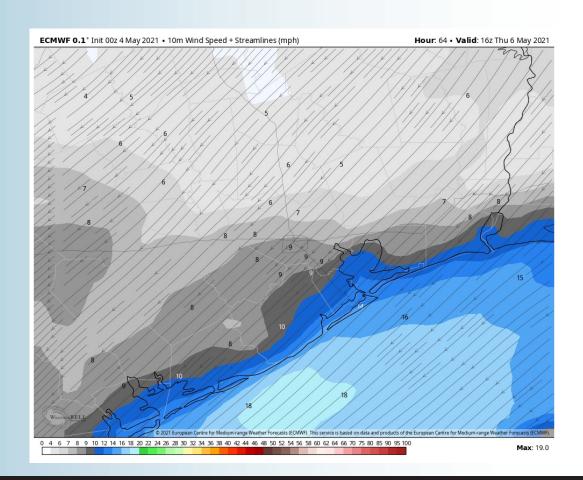

- > Thursday is also expected to be a dry day across the area.
- Winds Thursday will start out 10-15 MPH sustained out of the NE in the morning, decreasing to 4-8 MPH into the PM hours.
- Highs will sit in the mid 70s over the open water, warmer in-land.
 - No fog expected Thursday night at this distance.

Simulated Radar Snapshot (1 PM CT)

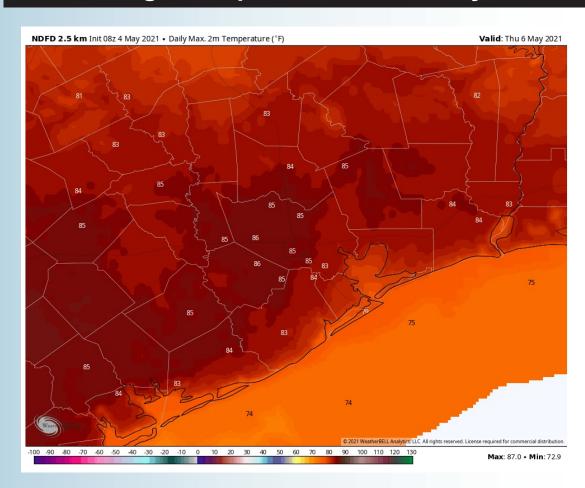

Thursday, May 6th, 2021

Sustained Winds (11 AM CT)

High Temperatures Thursday

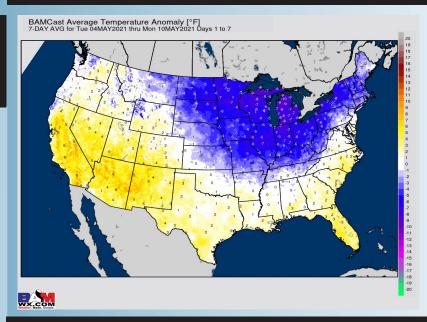

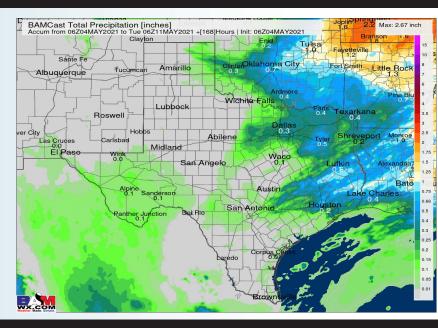

Tuesday, May 4, 2021

Week 1 Forecast

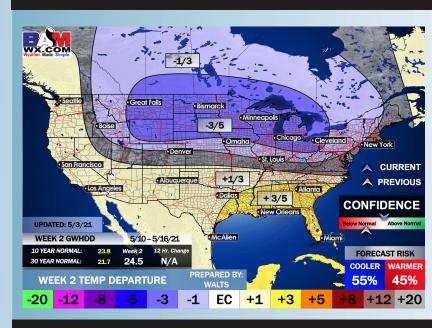

Long-Range Forecast Discussion

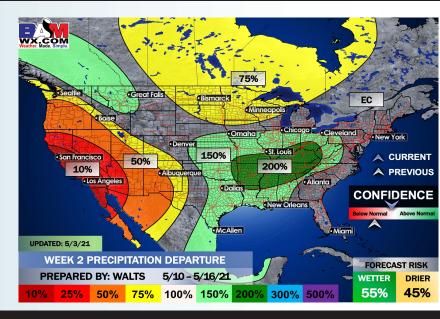

- Near normal temps
 expected over the
 next week, moisture
 risks look rather
 limited and further off
 to the northeast.
- Working into Mid-May, we are favoring above normal temps for this time of year and for precipitation to stay on the active side of things. Increased moisture risks likely continue across the Southern US.
 - The weeks ¾
 (Mid/Late May) period likely features more normal conditions for SE TX. Temps and precipitation are favored to be near normal for this time of year.

Week 2 Forecast

Weeks 3/4 Forecast
