Short-Term Forecast Discussion

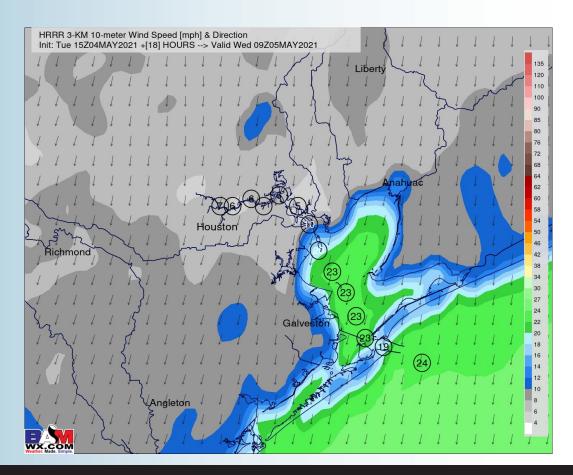

A few scattered t-storms will be possible along a weak cold front from the 1-7pm timeframe tonight that may briefly reduce visibility, drying out deeper into the overnight we go.

- ➤ Winds into the overnight increase to 15-20 MPH sustained, at times, gusting up to 23-28 MPH out of the NNE.
- > Lows tonight drop into the upper 60s to near 70F.
 - ➤ No fog expected tonight. A few periods of haze/light mist will be possible across the stations, as slide 2 shows, can't be ruled at times. Visibility is not anticipated to drop below 3miles.

Week 1 Forecast

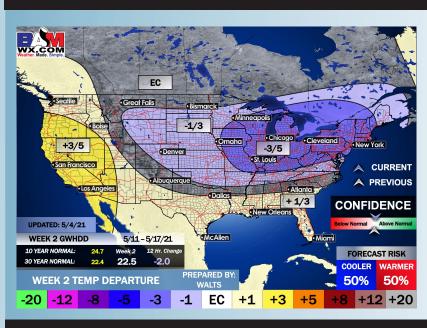

Long-Range Forecast Discussion

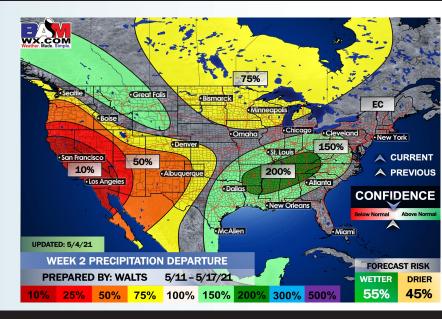

- Near normal temps
 expected over the
 next week, moisture
 risks look rather
 limited and further off
 to the northeast.
- Working into Mid-May, we are favoring above normal temps for this time of year and for precipitation to stay on the active side of things. Increased moisture risks likely continue across the Southern US.
 - The weeks ¾
 (Mid/Late May) period likely features more above normal temperatures and above normal moisture, similar to our current week 2 thoughts.
