

Updated: 1:00 PM CT, Monday, June 14, 2021

As always, please do not hesitate to reach out to us with any forecast questions via the chat option on the Weather Porthole or our on call number, (317)-560-8122 press 1 for forecast questions.

Tropical Update (no change):

GEFS Tracks (Next 10-days):

Euro Ensemble Tracks (Next 10-days):

We continue to keep an eye around the 18th – 20th for a tropical system which can impact areas along the Gulf Coast. Shown above are the European and American (GEFS) ensembles of low pressure tricks with this upcoming system. *The majority of model data continues to suggest a landfall east of HOU*. However, some members on the ensembles are further to the west, so the risk for HOU is still in the realm of possibility even though it's on the lower end. Ensemble members do not really suggest a Hurricane potential as well, more of a tropical storm. We are still several days outs, with shifts one way or the other still possible. We will continue to monitor the situation.

Visibility Report

Monday, June 14, 2021

Short-Term Forecast Discussion

Data has progressively weakened much in terms of rainfall chances today across the Stations today to tonight. An isolated storm cannot be fully ruled out, but the better potential for precipitation looks north and west of our main focus area.

- Winds tonight should generally stay 4-8 MPH sustained out of the South.
- Low temps tonight hold pretty steady in the low to mid 80s across open water locations.
 - Not expecting fog tonight.

Sustained Winds (2 AM CT)

Simulated Radar Snapshot (7 PM CT)

Low Temps Tonight

Weather. Made. Simple.

Short-Term Forecast Discussion

Tuesday looks to have isolated chances in the afternoon hours with any activity likely waning down with the loss of daylight. We think once again, similar to today, most of the activity stays rather north of most of our locations. A locally heavy downpour can't be fully ruled out with some lightning and briefly gusty winds if a storm passes over a Station.

Winds look to rather minimal once again on TUE out of the SE, around 4 – 8 MPH. Some breezier conditions possible under any isolated storms that can form.

Temperatures on TUE look to get into the upper 80's F to lower 90's F over open waters.

> No fog anticipated Tuesday.

Simulated Radar Snapshot (4 PM CT)

Sustained Winds (4 PM CT)

High Temperatures TUE

Wednesday, June 16th, 2021

Short-Term Forecast Discussion

> Wednesday looks to have isolated chances in the afternoon hours with any activity likely waning down with the loss of daylight similar to Tuesday's. The way things have been trending, we'd favor lower end chances to mainly dry here once again.

- Winds on Wednesday morning look to start weakly out of the NE at 3-6 MPH sustained, shifting out of the SE into the PM hours at a similar speed, possibly at times up to 4-8 MPH sustained.
 - **Temperatures on WED look to get into the upper** 80's F to lower 90's F over open waters.
 - No fog anticipated Wednesday.

Sustained Winds (4 PM CT)

Simulated Radar Snapshot (5 PM CT)

High Temperatures WED

Monday, June 14, 2021

Long-Range Forecast Discussion

eather. Made. S

Houston Pilots

•

- Temperatures look to run at/ slightly above normal the next 7 days.
 Scattered chances will be possible for much of the week ahead with increasing chances
 heading into the weekend as a tropical disturbance gets closer.
 - Week 2 is anticipated to be an active stretch of weather for HOU with temperatures running slightly below normal. The beginning of the period may see influence of added tropical moisture from the aforementioned system.
- The weeks ³/₄ (mid to late June) period likely features more cooler than normal temperatures and above normal moisture, similar to our current week 2 thoughts. Tropical threats will need to continue to be monitored.

Week 2 Forecast

Weeks 3/4 Forecast
