## Short-Term Forecast Discussion

- Continuing to eye the afternoon hours for a few hit and miss pockets of precipitation. Several hours of drier weather will still be possible between any cells. Any activity looks to wind down as the sun goes down and we lose some of our daytime heat that would help fuel precip. The threat of scattered precip into the overnight cannot be fully ruled out, but would favor generally quieter weather before daybreak tomorrow.
- Winds continue from the SSE, coming sustained at 13-18 MPH with gusts 18-23 MPH possible at the boarding station. Once again we will have to watch for slightly elevated winds at the boarding station this evening from ~8 PM to 2 AM, sustained winds of 15-20 MPH cannot be ruled out
- Low temps bottom out in the lower 80s around the area.
  - *No fog is anticipated this evening.*

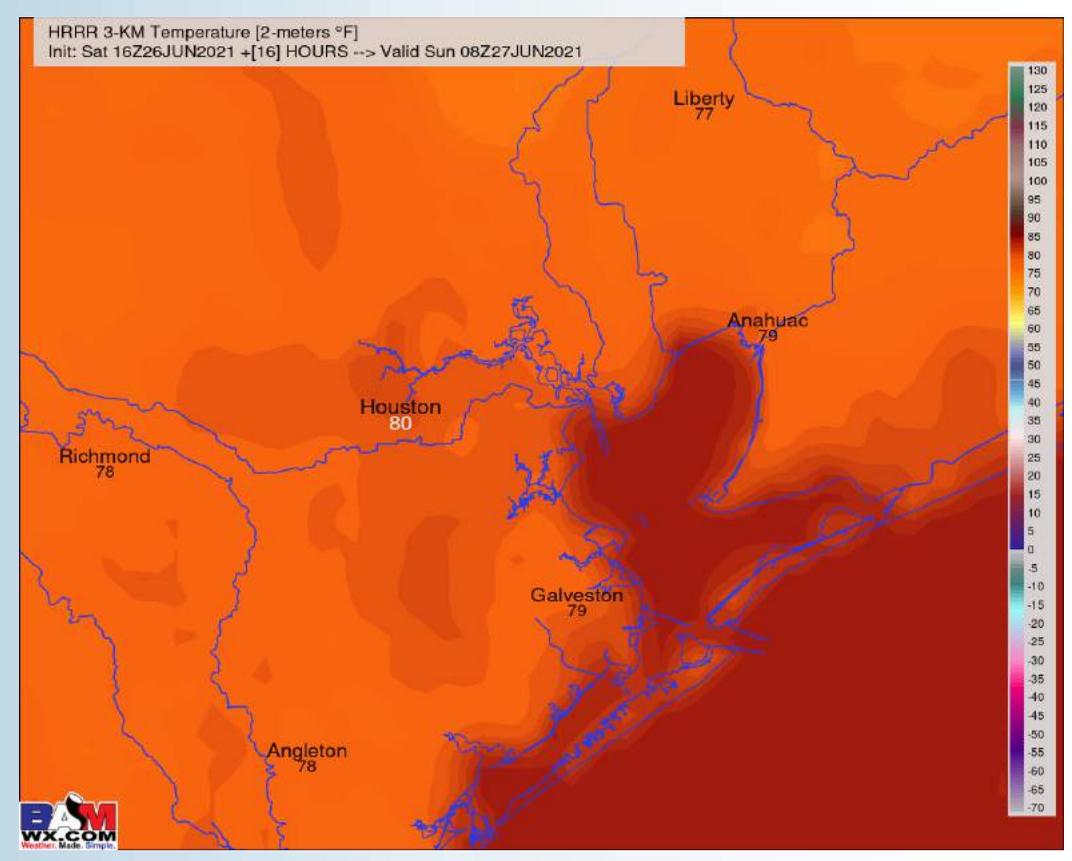

## Sustained Winds (9 PM CT)

## Simulated Radar Snapshot (6 PM CT)

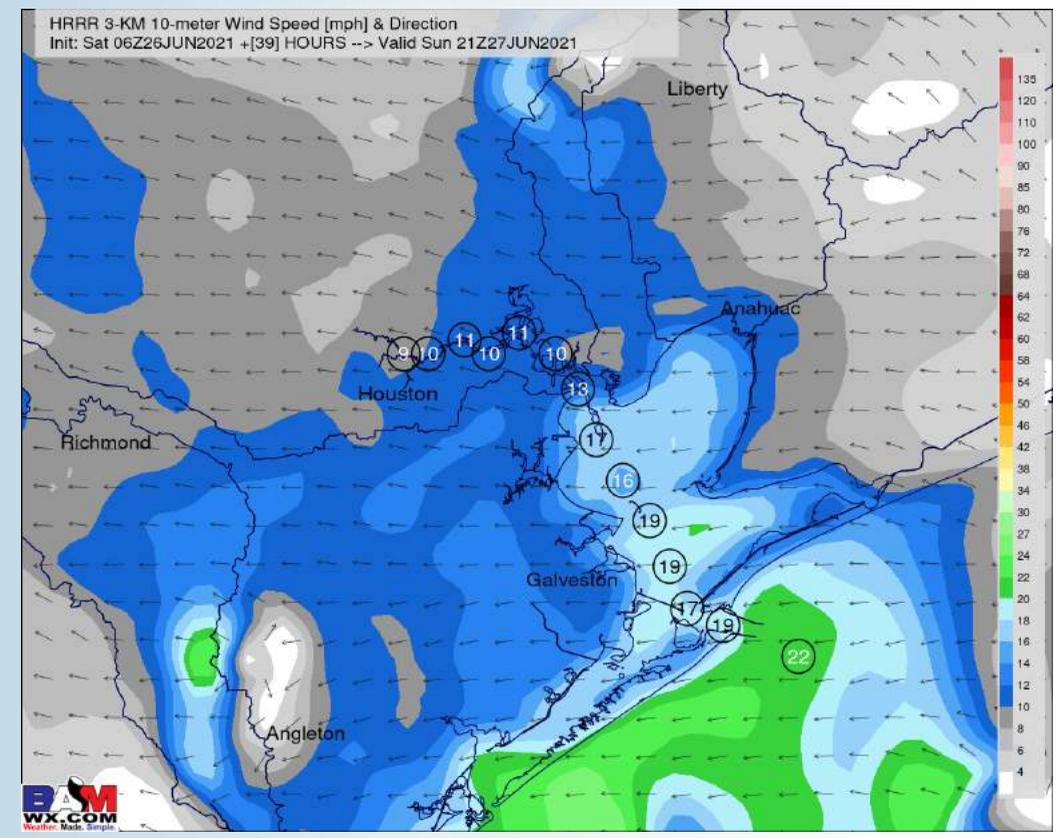

## Low Temps this Evening

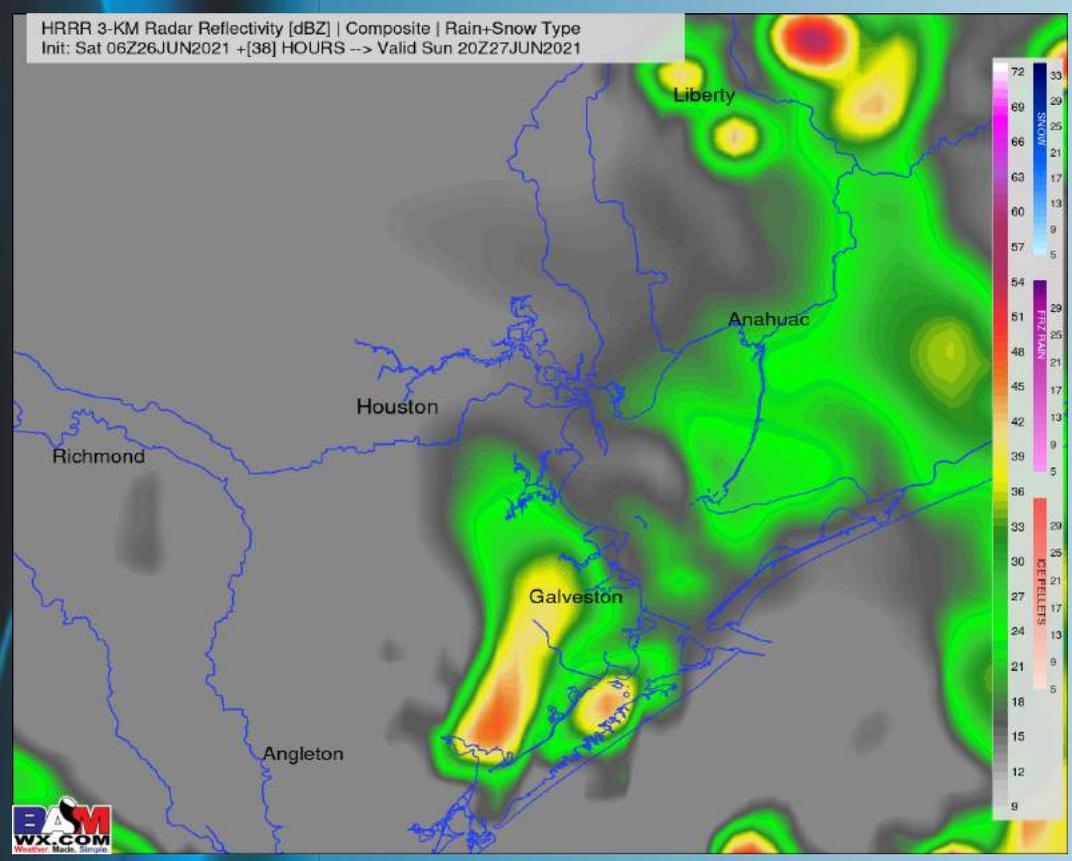

## Short-Term Forecast Discussion

- Tomorrow looks to be the best threat that we've seen for precip over the past several days. Scattered showers and thunderstorms will be around the area and at this distance - while a few iso showers will be possible near daybreak - the middle portion of the day (11 AM – 6 PM) looks to hold the highest overall chances for precipitation. Lightning will be possible in any cell. A few locally stronger cells with a heavier downpours will be possible, but severe weather is not anticipated.
- Sunday's winds look to start out SSE, but then shift a bit more out of the ESE by mid-afternoon, sustained 13-18 MPH with a few gusts to 18-23 MPH. Pockets of precipitation do look to hold the ability to bring a few gusts locally higher.
- Sunday's highs look to be in the upper 80s to lower 90s
  - *No fog is expected for Sunday.*

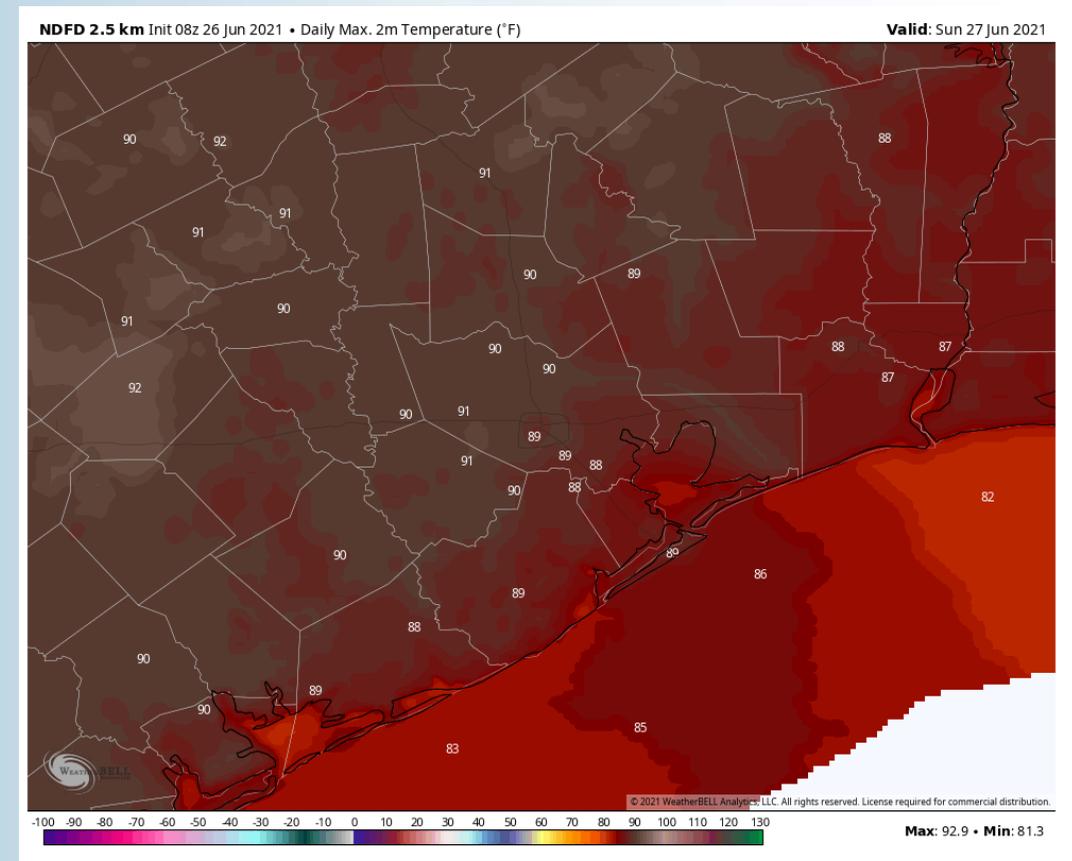

## Sustained Winds (4 PM CT)

## Simulated Radar Snapshot (3 PM CT)

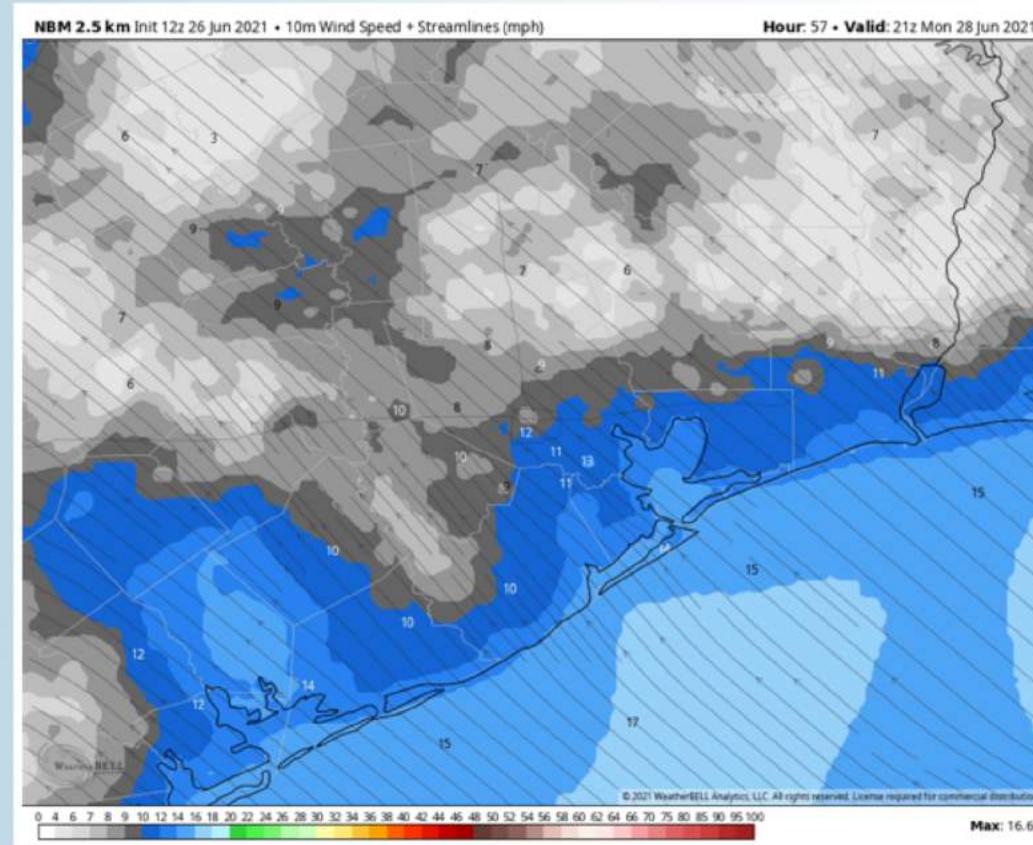

## High Temps Sunday

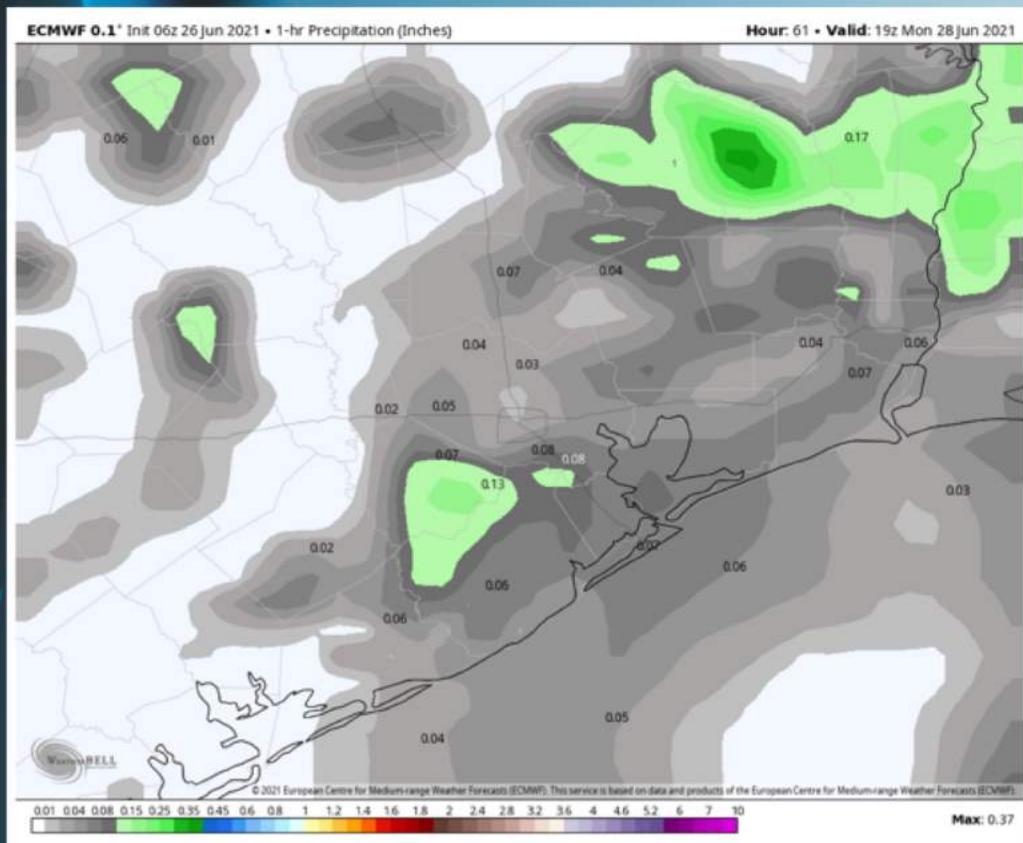

## Short-Term Forecast Discussion

- Scattered precipitation Monday morning will give way to likely chances of storms into the afternoon/ evening. Heavy rain will be possible
- Early Monday morning winds look to turn back more out of the SSE at 12-18 MPH, gusts of 18-23 MPH will be possible.
- Increased cloud cover should keep temperatures into the mid 80's F on Monday.
- ***No fog is favored for our Monday.***

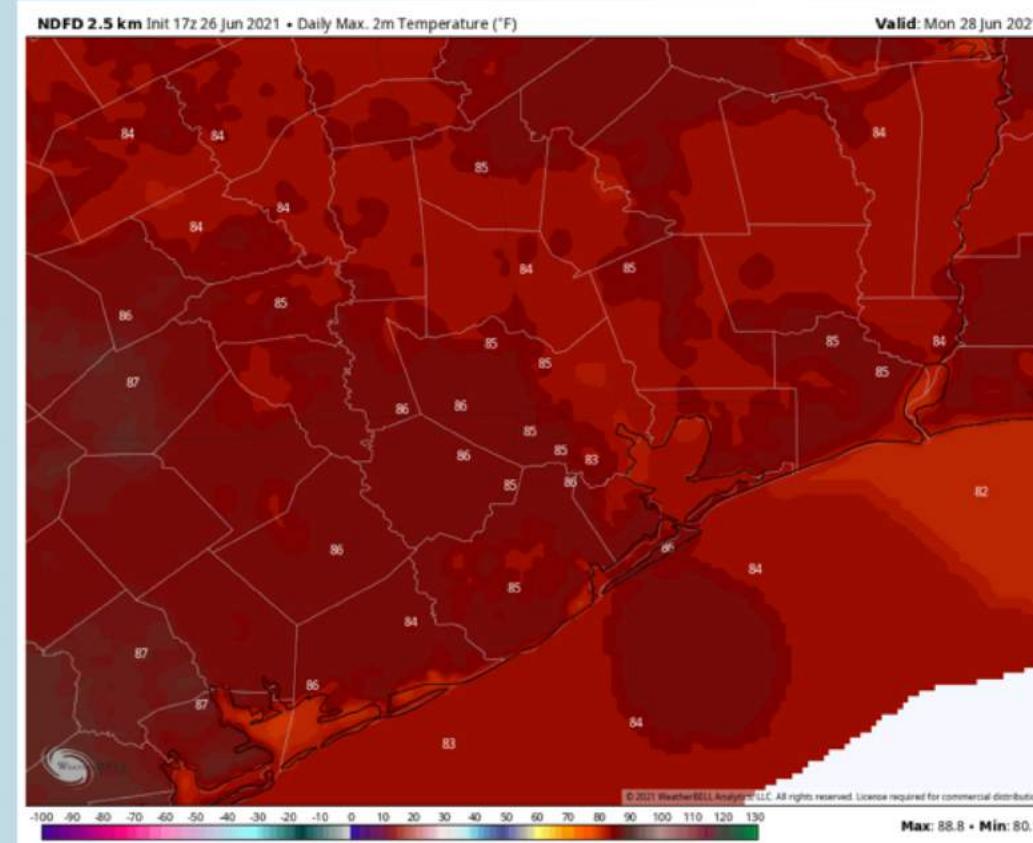

## Sustained Winds (4 PM CT)

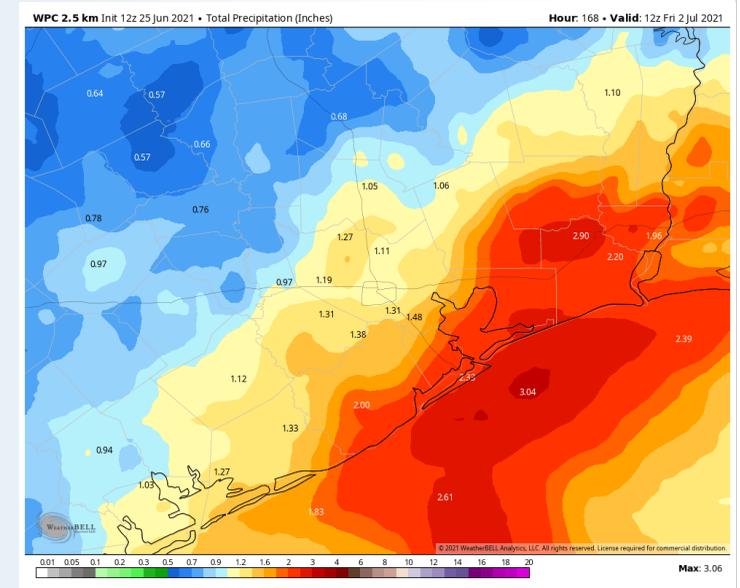

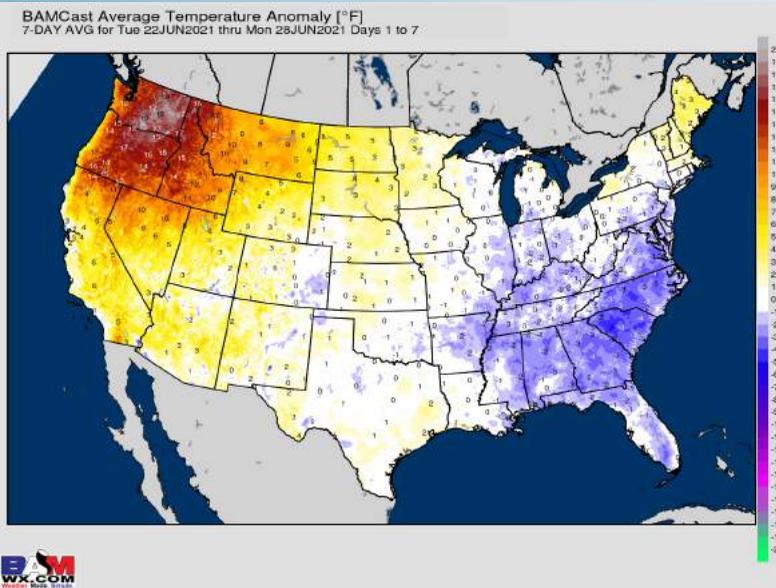

## Simulated Radar Snapshot (2 PM CT)

## High Temps Monday

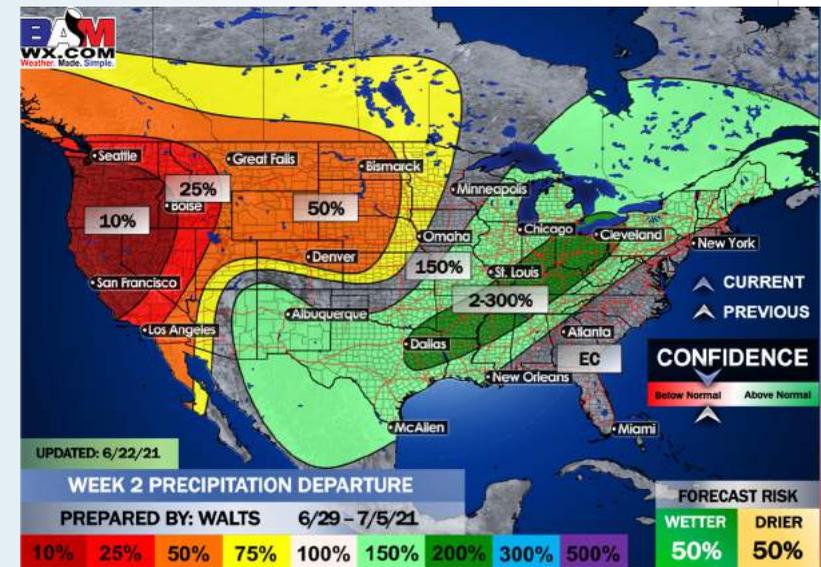

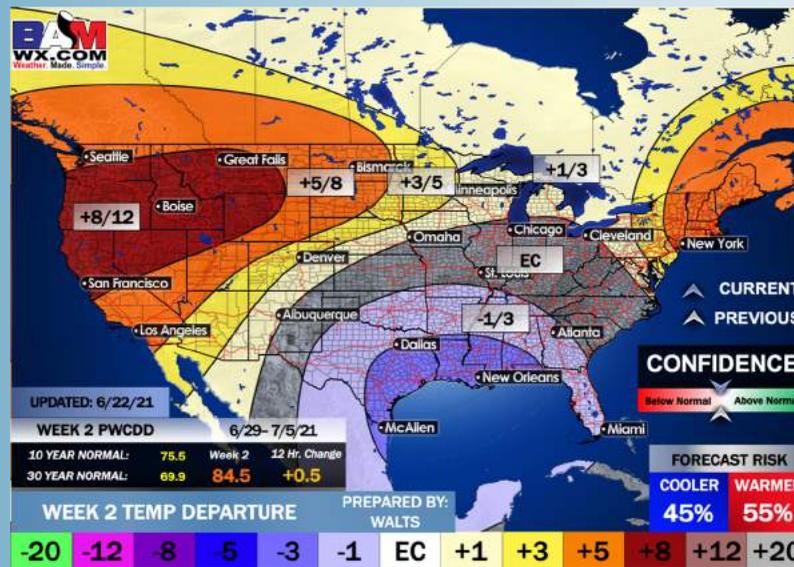

## Week 1 Forecast

## Long-Range Forecast Discussion

- Temperatures look to run at right about normal the next 7 days. Once we work into early next week, we are in favor of a bit more of an active pattern with increased chances compared to the hit and miss chances we've seen the past few days.
- Week 2 is anticipated turn more active in precipitation, with temps staying overall slightly below normal across the area.
- The weeks  $\frac{3}{4}$  (1<sup>st</sup> half of July essentially) period likely features more seasonable to cooler than normal temperatures, while precipitation looks to continue running above normal in this period as well.

## Week 2 Forecast

## Weeks 3/4 Forecast
