Short-Term Forecast Discussion

- The threat for scattered showers / t-storms will continue the rest of the afternoon and evening hours. As we head into the overnight, a few very isolated pockets of precip will still be possible, but coverage likely diminishes as the sun sets and we lose daytime heating. Locally heavier downpours will continue to remain possible as well as lightning.
- Winds look to continue coming out of ESE/ SE, sustained 13-18 MPH with a few gusts to 18-23 MPH. Pockets of heavier precipitation do look to hold the ability to bring a few locally higher gusts.
- Low Temps fall back into the upper 70s / lower 80s
 - *No fog is expected this evening.*

Sustained Winds (7 PM CT)

Simulated Radar Snapshot (1 AM CT)

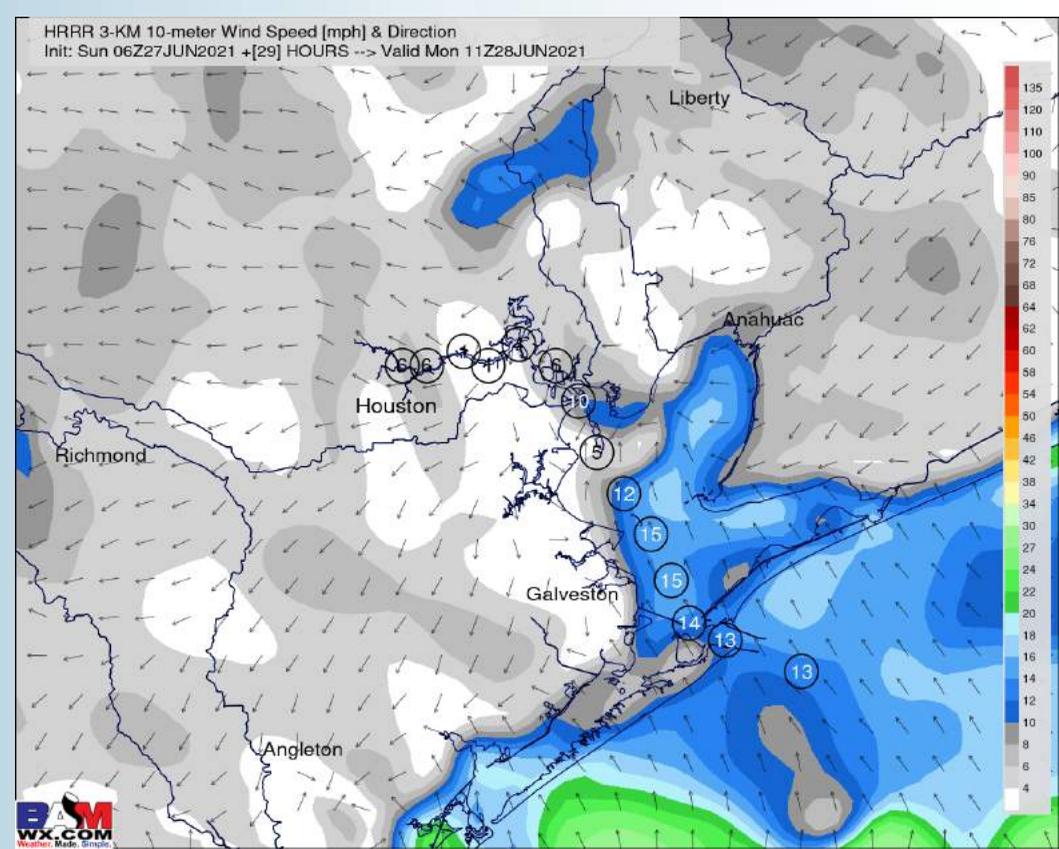

Low Temps Tonight

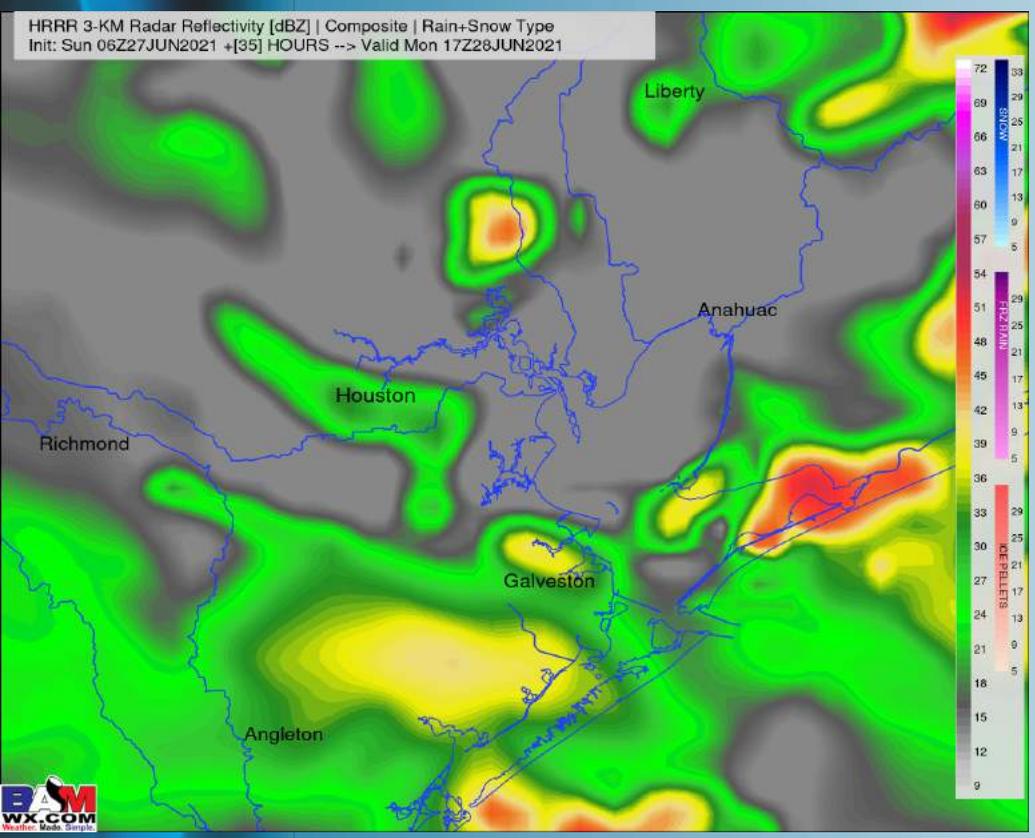

Short-Term Forecast Discussion

- Monday is shaping up to be a rather wet day across the area. A few breaks in precip here and there will be possible, but the day likely features more wet time than dry. A bit of discrepancy as to whether the overall highest chances come mid AM or mid PM, but mid-day likely features the most areal coverage of precip. A few locally heavier downpours and lighting will be possible in any cell.
- Early Monday morning winds look to turn back more out of the SSE at 13-18 MPH, gusts of 18-23 MPH will be possible. A bit lower confidence, but into the afternoon hours winds look to turn a bit more SE and slightly more elevated, sustained 15-20 MPH. Any precip through the day holds the potential of locally stronger wind gusts.
- Monday we will see a bit of a relax in temps, only expecting mid 80s across the area.
- *No fog is favored for our Monday, but reduced visibility in any heavier precip will be possible.*

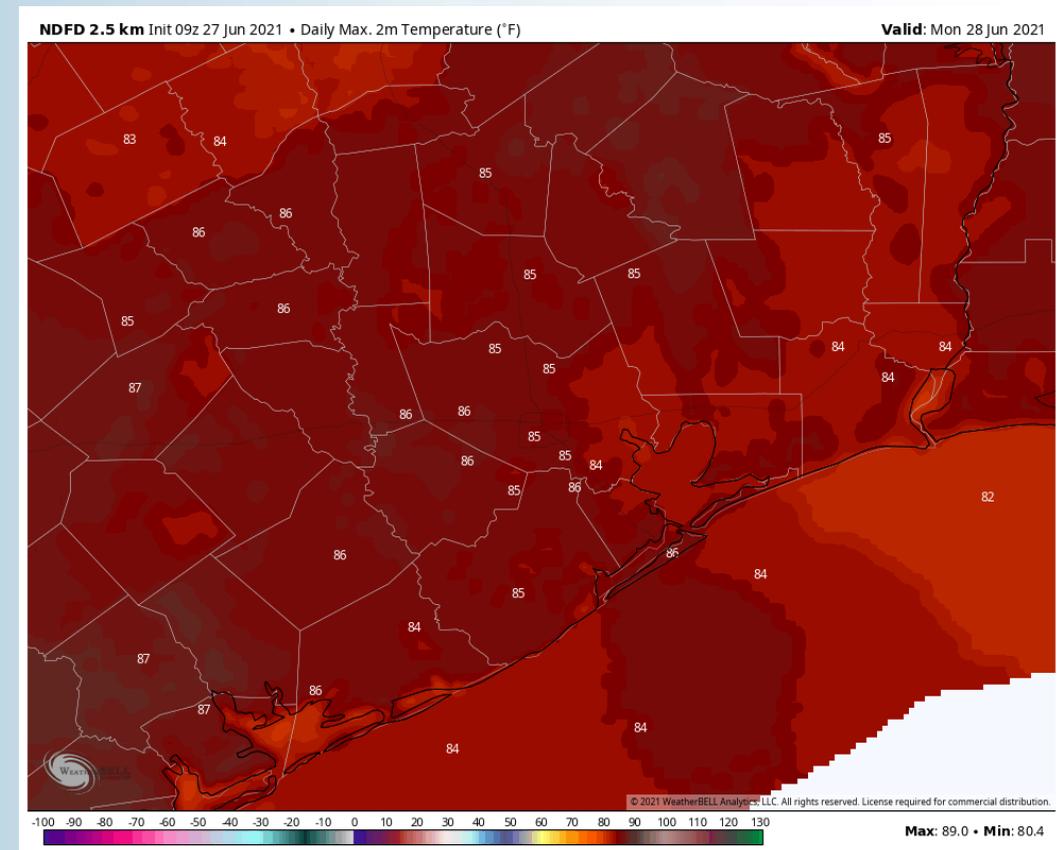

Sustained Winds (7 AM CT)

Simulated Radar Snapshot (1 PM CT)

High Temps Monday

Short-Term Forecast Discussion

- The active pattern continues Tuesday as we are expecting continued moisture chances. Coverage looks to be slightly lower than Monday, however multiple rounds/ waves of showers and thunderstorms are looking likely.
- Winds Tuesday will be coming from the SE at 10-15 MPH with gusts 15-20 MPH.
- Tuesday's temps look to hover around the mid 80s
 - *No fog is anticipated for Tuesday.*

Sustained Winds (2 PM CT)

Simulated Radar Snapshot (1 PM CT)

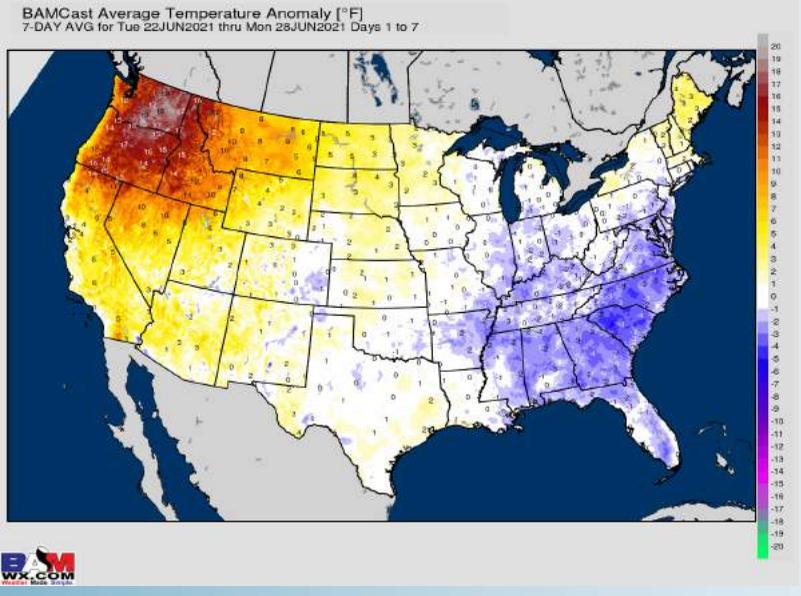

High Temps Tuesday

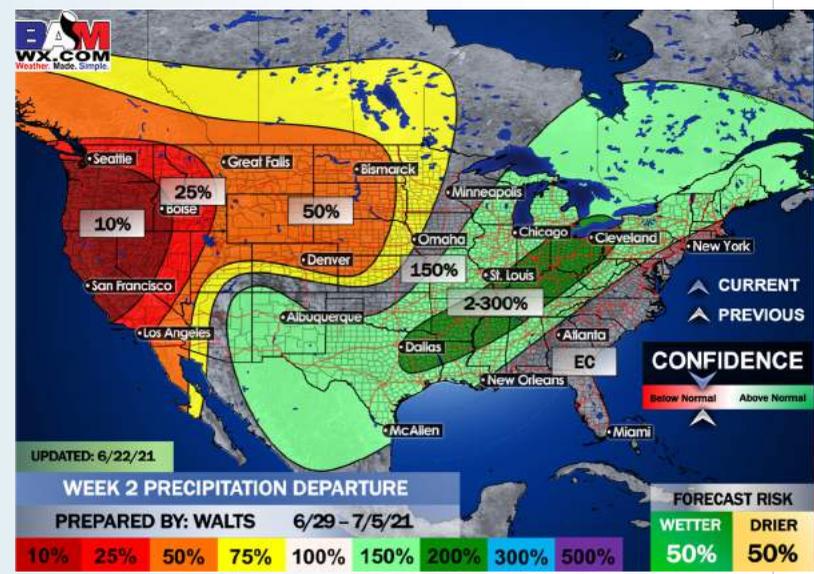

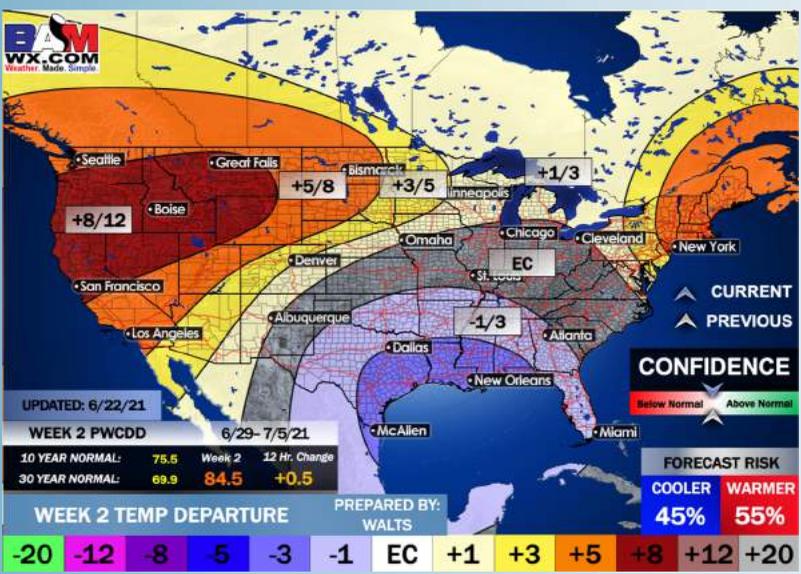

Long-Range Forecast Discussion

- Temperatures look to run at right about normal the next 7 days. Once we work into early next week, we are in favor of a bit more of an active pattern with increased chances compared to the hit and miss chances we've seen the past few days.
- Week 2 is anticipated turn more active in precipitation, with temps staying overall slightly below normal across the area.
- The weeks 3/4 (1st half of July essentially) period likely features more seasonable to cooler than normal temperatures, while precipitation looks to continue running above normal in this period as well.
