Short-Term Forecast Discussion

- Continuing to favor a generally drier day today. Aside from a 10% chance out through ~8 AM and a ~10-20% chance of something very isolated into the late afternoon hours, quieter conditions are expected.
- Sustained winds of 13-18 MPH possible coming out of the SSW will be favored for Sunday. Gusts of 18-23 MPH cannot be ruled out near the boarding station.
- Upper 80s looking to be the high for most locations today.
 - *No fog expected today.*

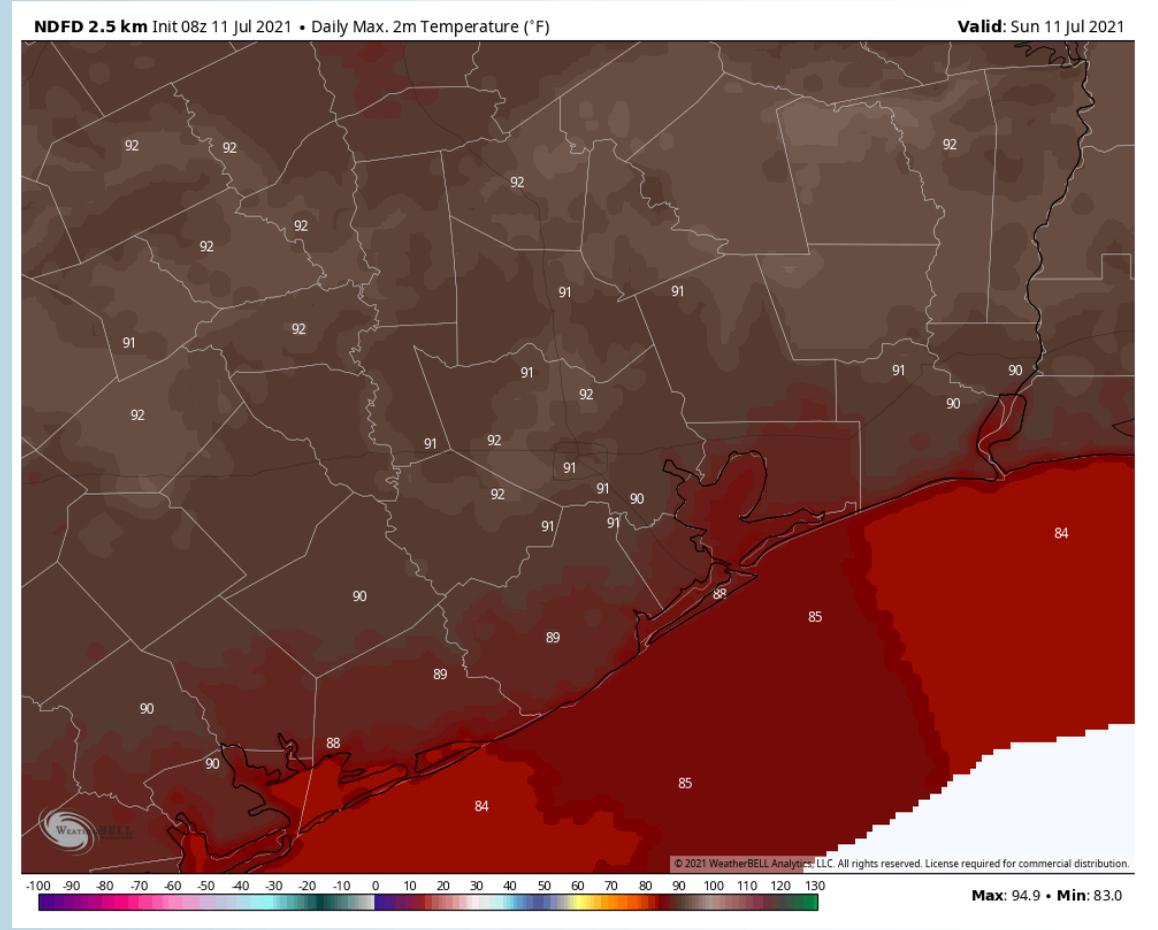

Sustained Winds (3 PM CT)

Simulated Radar Snapshot (3 PM CT)

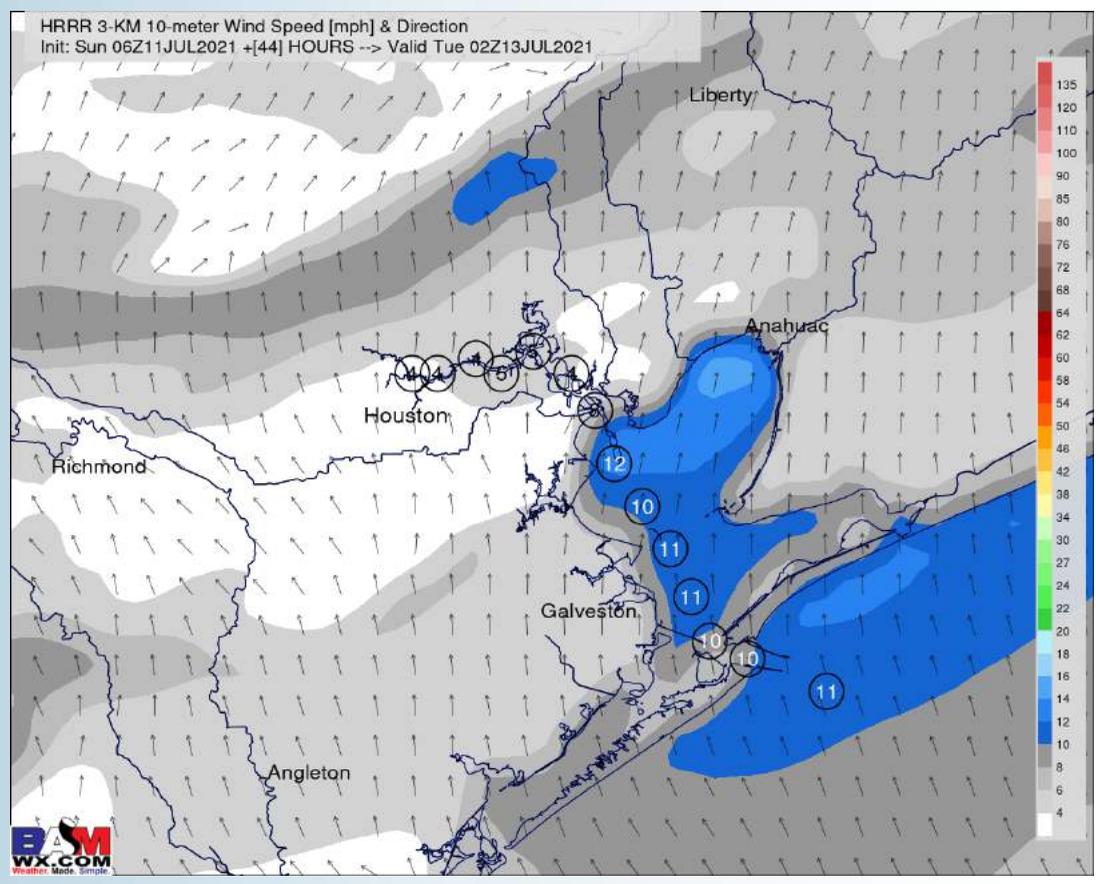

High Temps Today

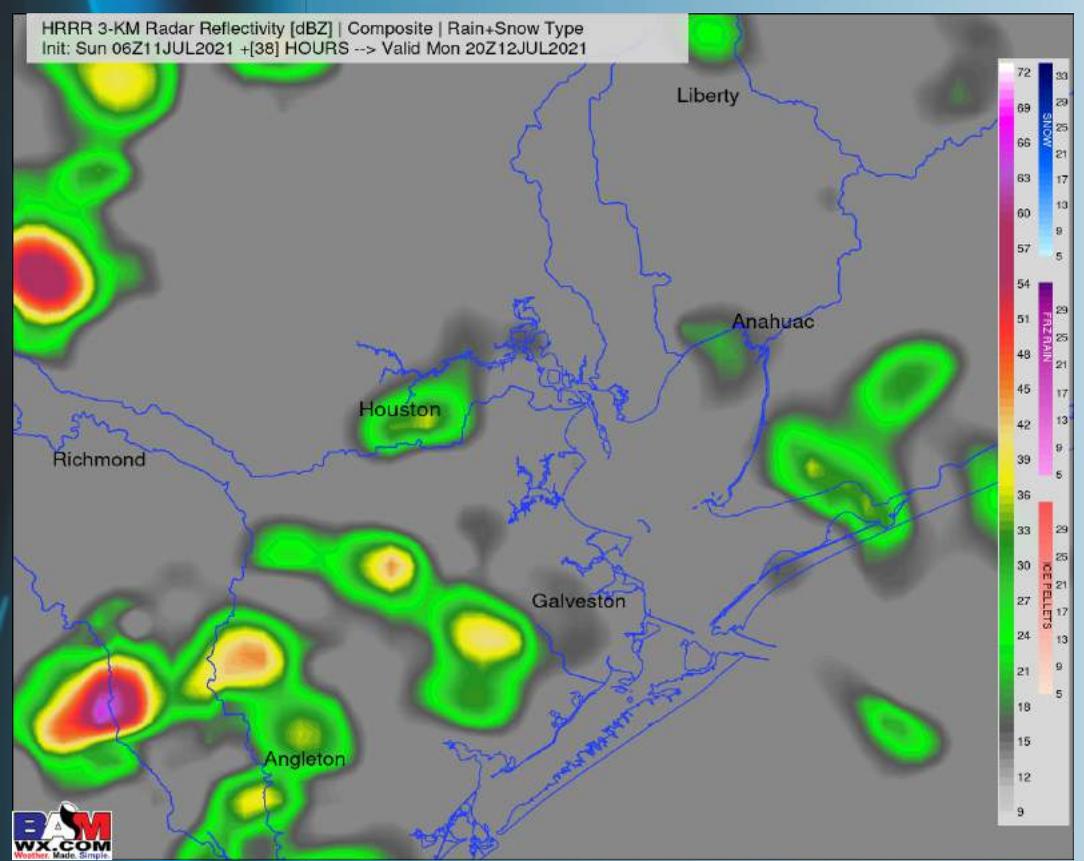

Short-Term Forecast Discussion

- A bit of uncertainty on Monday as some guidance is hinting at a cluster of storms working into the area from the North around mid-day. Right now we are in favor of this falling apart before reaching our stations, but wanted to mention the risk. Into the afternoon hours, scattered showers / t-storms will be possible.
- Looking at calmer conditions for our Monday, currently favoring winds out of the S/ SW at 8-13 MPH with a few gusts to 18 MPH possible. *If* this decaying cluster verifies and does reach us, we'd expect a brief wind shift mid-day from the N that would also elevate winds.
- Upper 80s are anticipated on the day Monday.
 - *No fog is anticipated for Monday.*

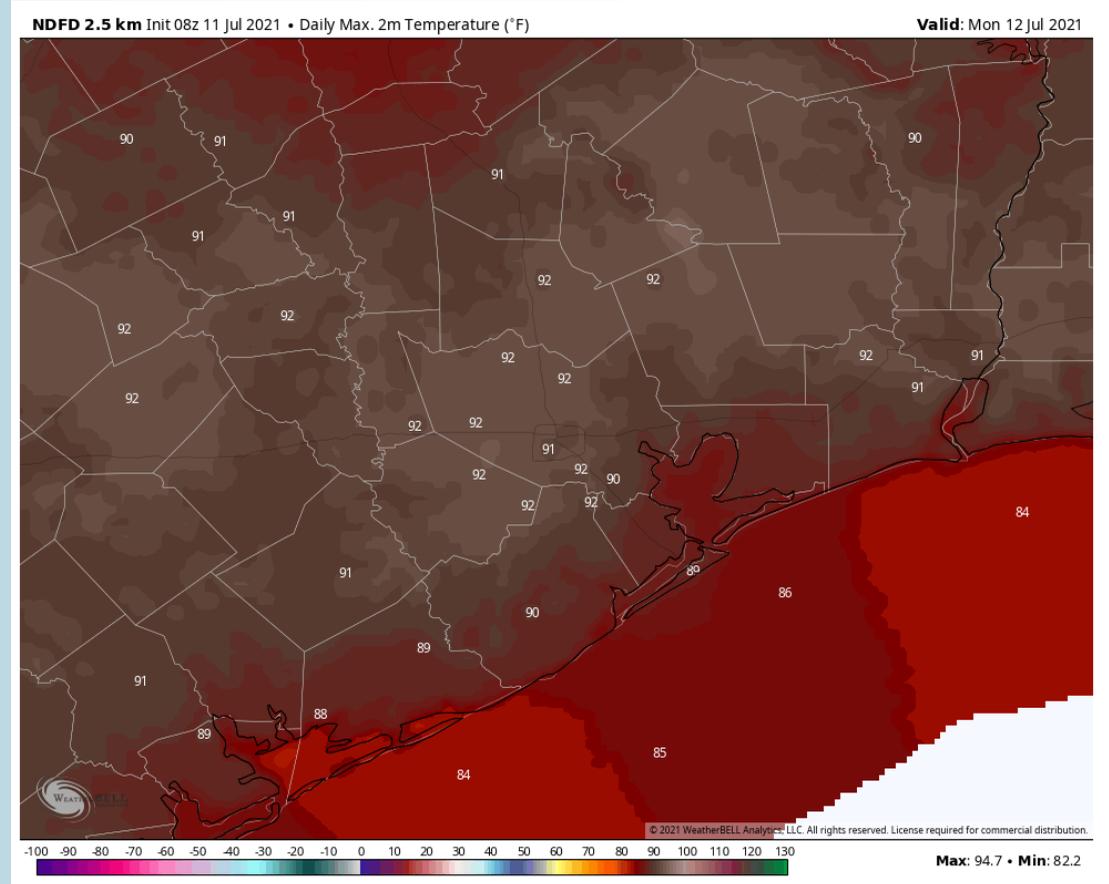

Sustained Winds (8 PM CT)

Simulated Radar Snapshot (3 PM CT)

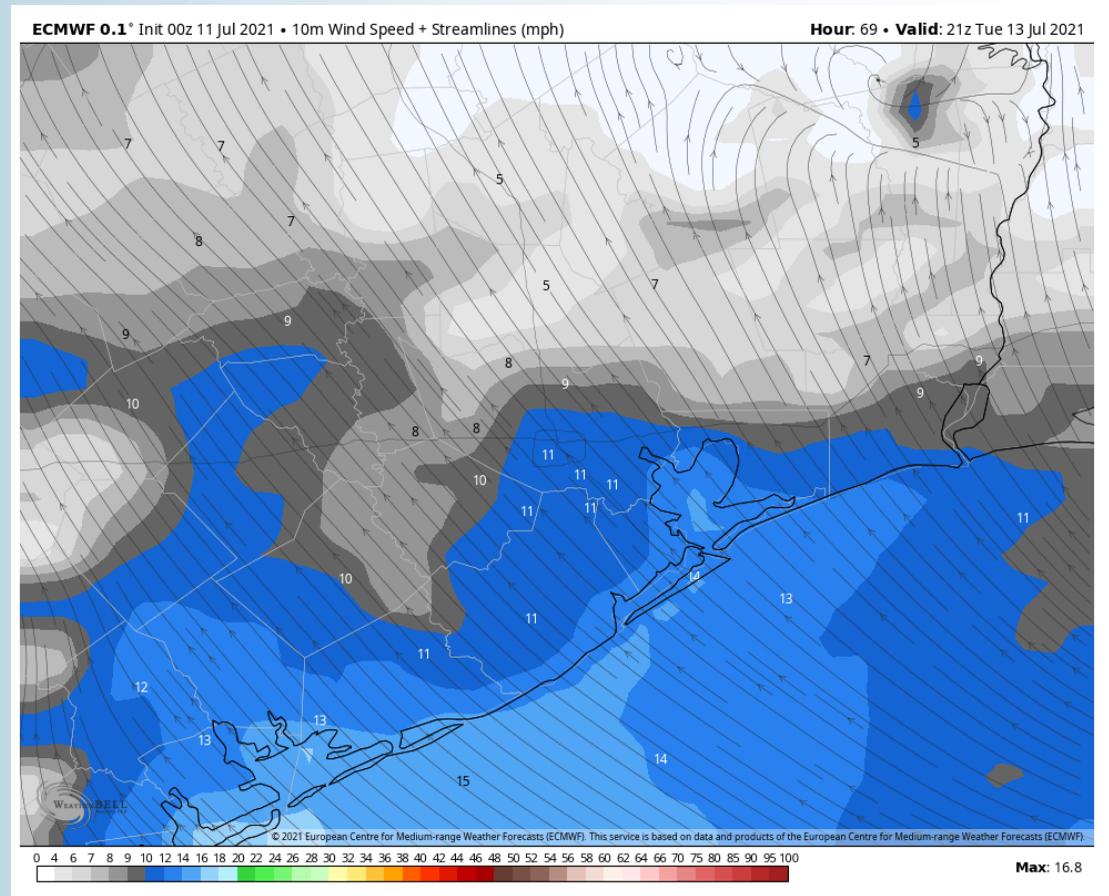

High Temps Monday

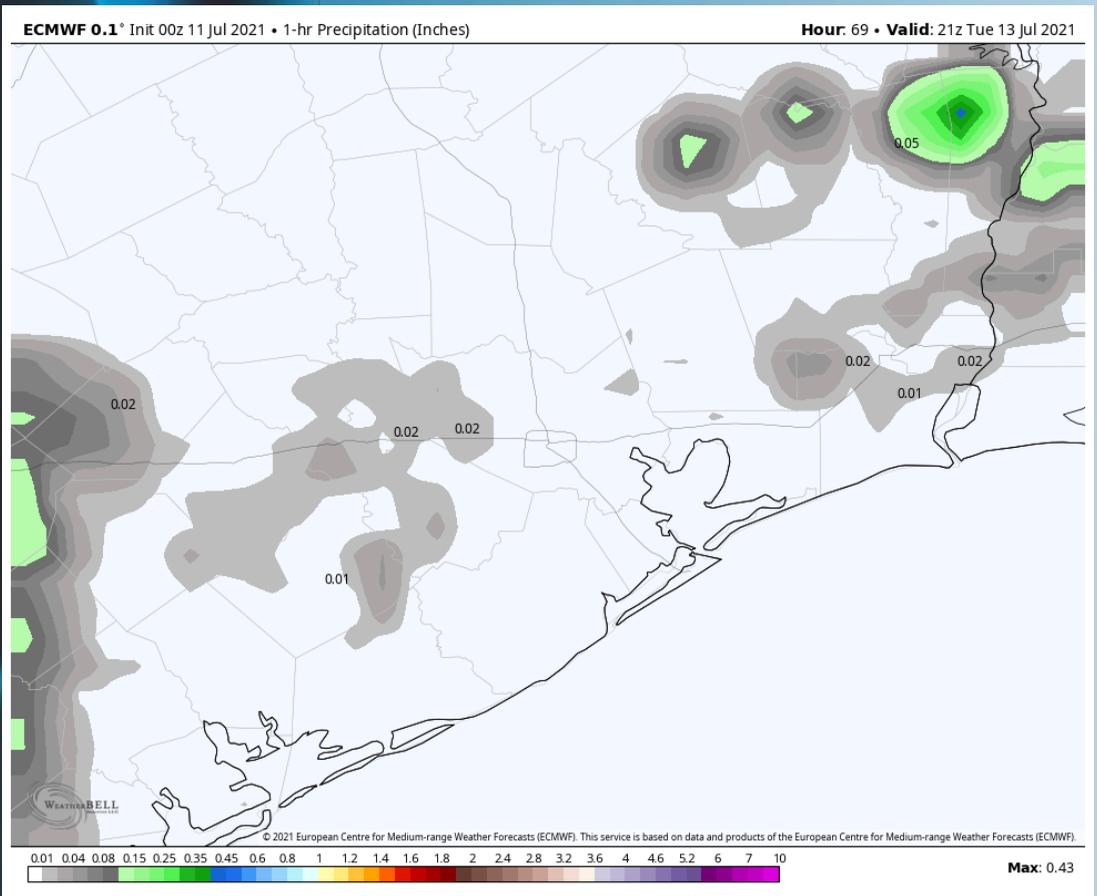

Short-Term Forecast Discussion

- Much of Tuesday likely remains on the drier side, but a few scattered showers/ t-storms (~30%) will be possible in the afternoon hours.
- Winds for Tuesday look to be coming out of the SSE at 8-13 MPH sustained with gusts locally higher.
- Highs look to once again sit in the upper 80s / lower 90s.
- *No fog is in the forecast for Tuesday.*

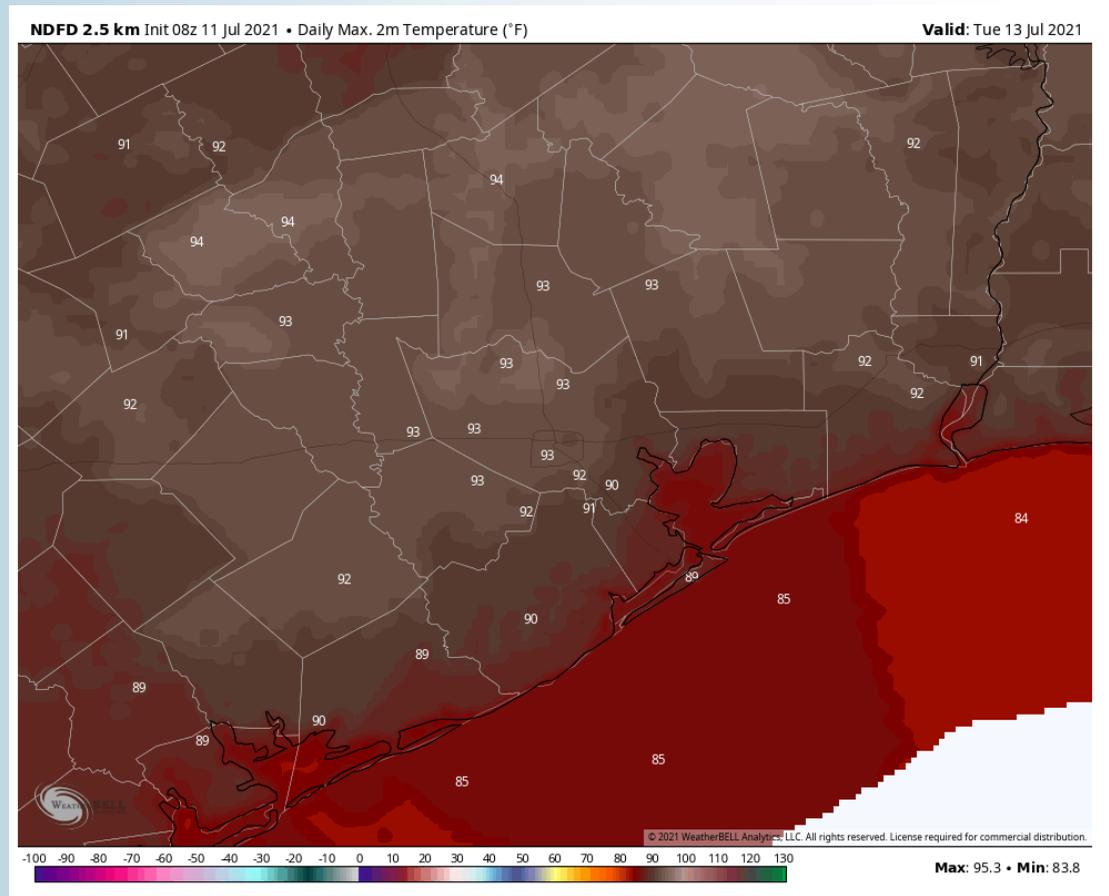

Sustained Winds (4 PM CT)

Simulated Radar Snapshot (4 PM CT)

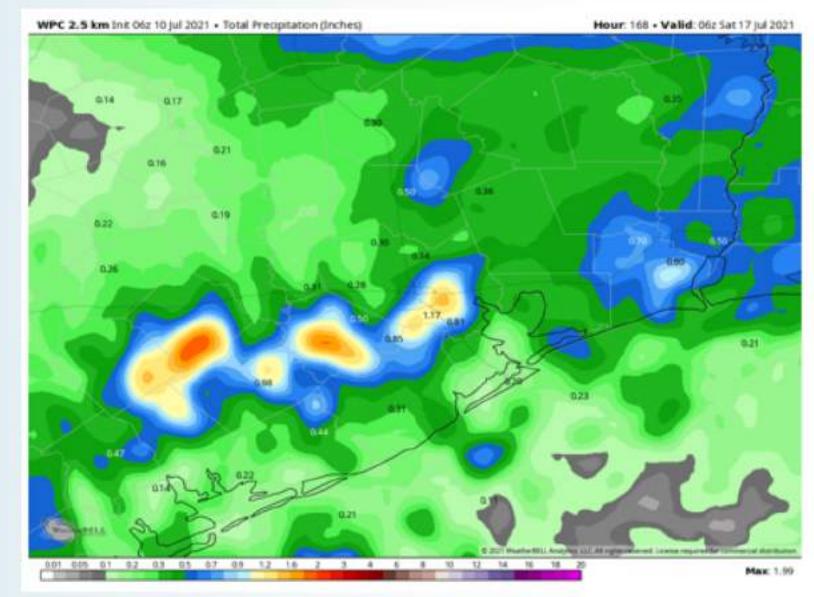

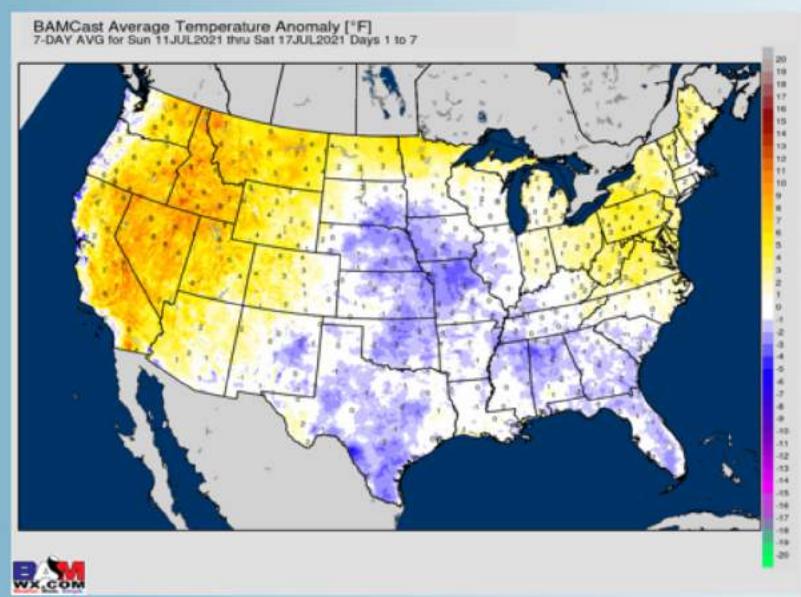

High Temps Tuesday

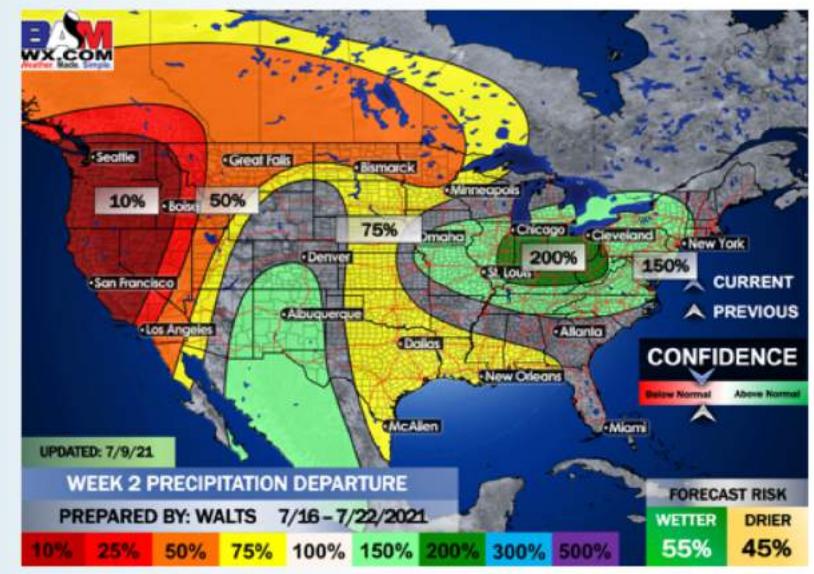

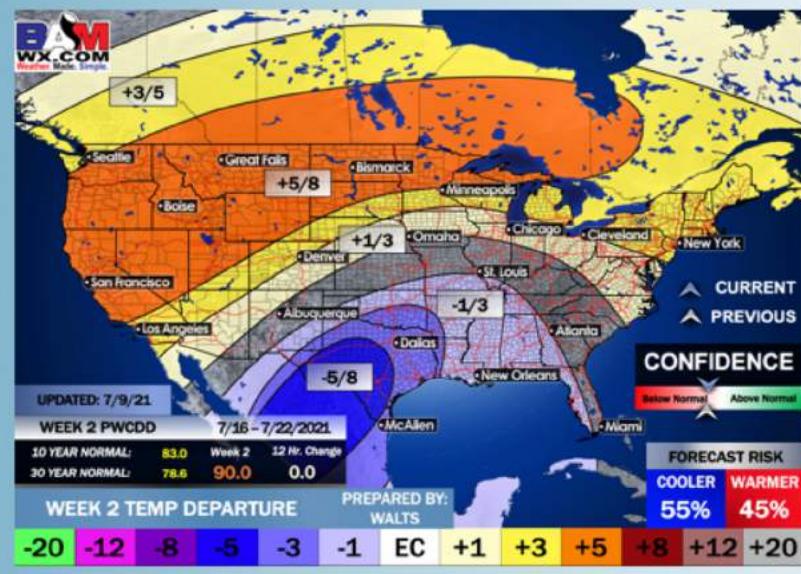

Long-Range Forecast Discussion

- The next 7 days will be much less active vs the previous few days with spotty chances from time to time. Temperatures look to remain at to just below normal as well.
- More ridging and high pressure looks to lead to below normal precipitation risk in the week 2 timeframe. Temperatures are anticipated to run below normal.
- The weeks 3/4 (late July into August essentially) period likely features more seasonable to cooler than normal temperatures, while precipitation looks to run above normal in this period as well.
