Short-Term Forecast Discussion

- Chances will continue to remain lower (~30%) thanks to the lower areal coverage of precip, but any location holds the potential to see any of these cells. Coverage likely diminishes a bit into the evening/overnight, but a few very spotty hit and miss cells will still be possible overnight.
- Winds will continue coming out of the SSE at 10-15 MPH sustained with gusts locally to 20 MPH possible inside any precipitation.
- Lows will once again be hovering in the upper 70s to lower 80s around the area.
 - *No fog is anticipated this evening.*

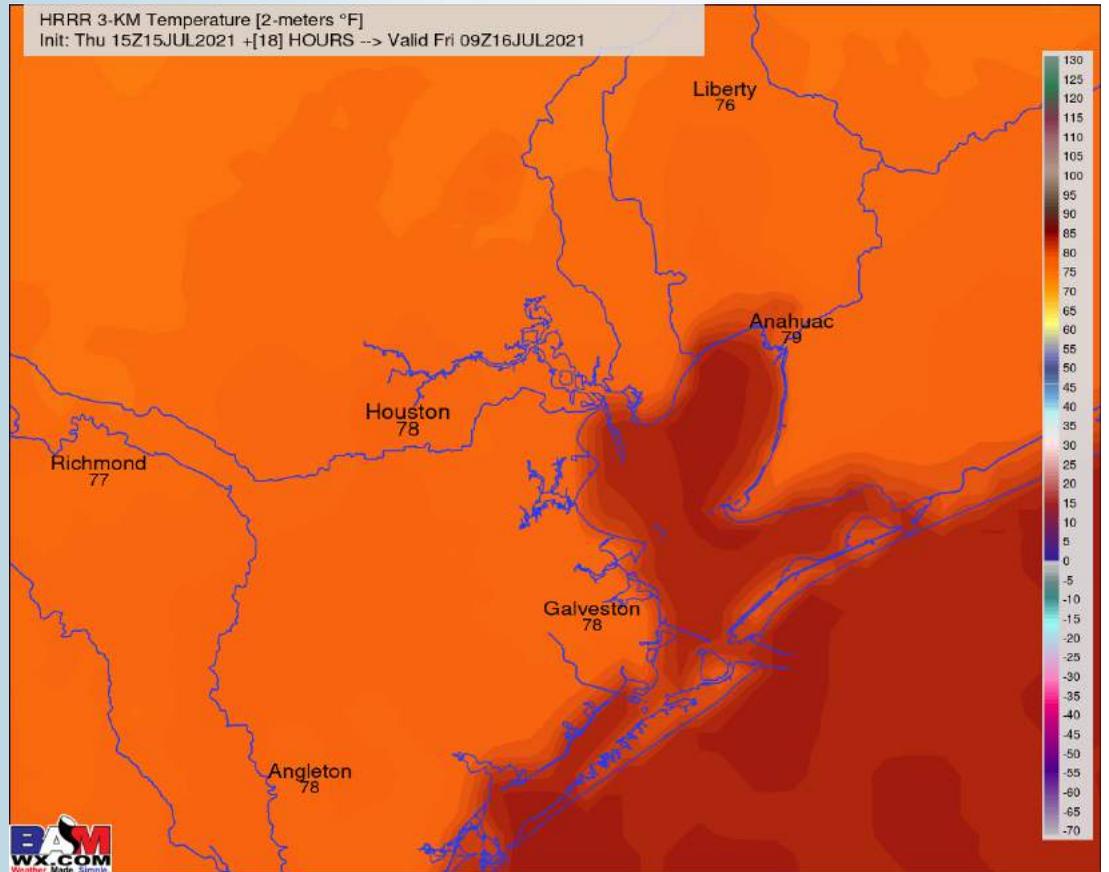

Sustained Winds (1 AM CT)

Simulated Radar Snapshot (9 PM CT)

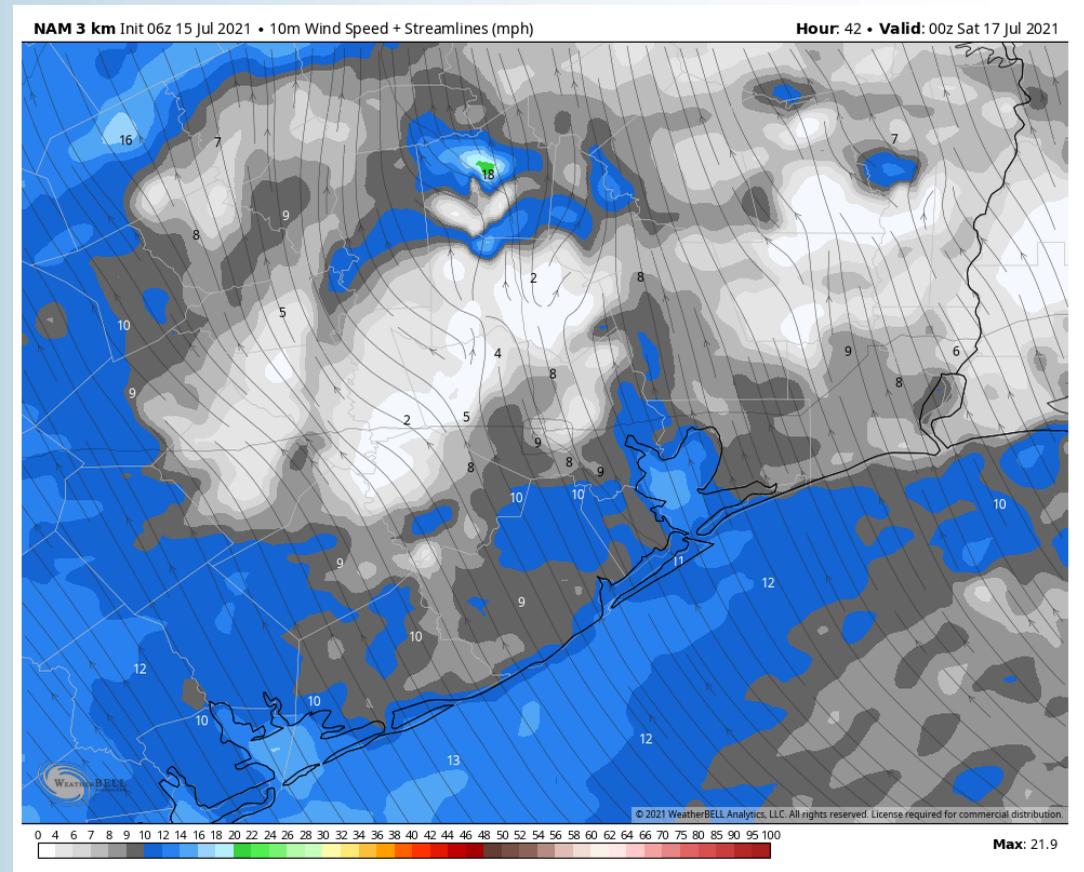

Low Temps This Evening

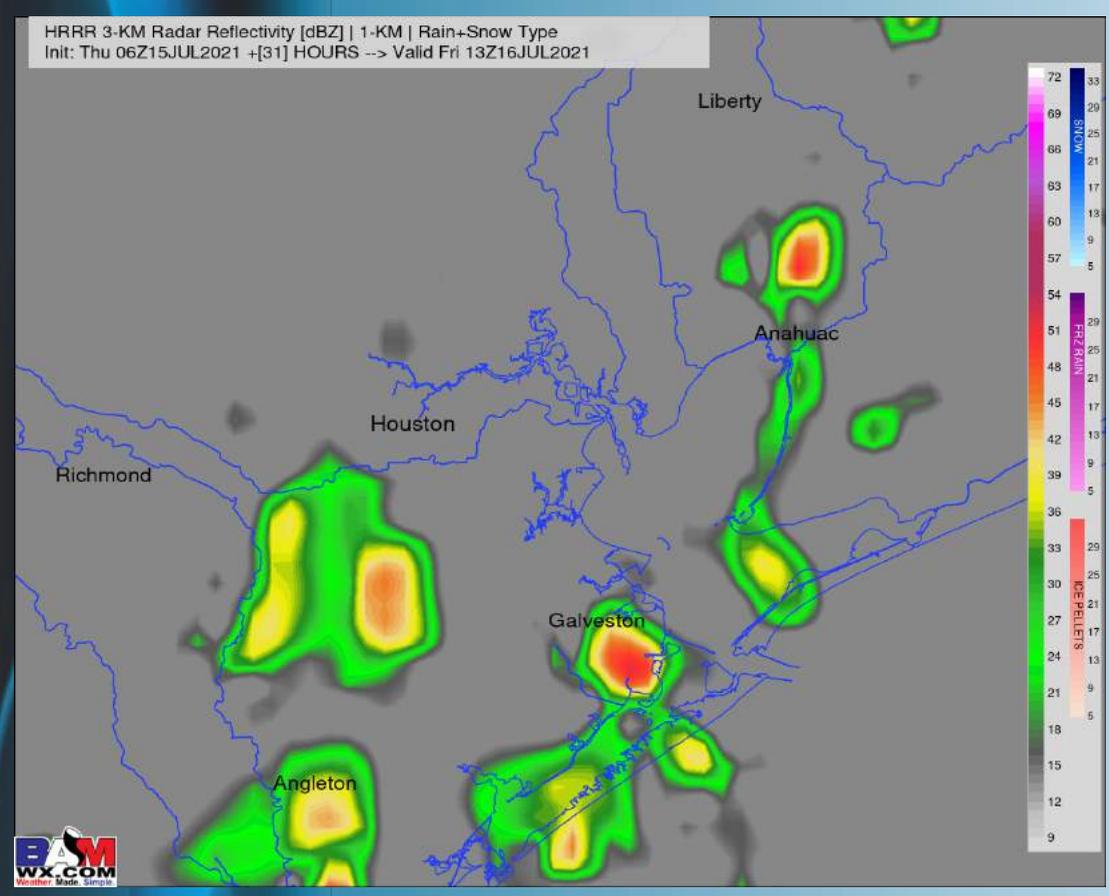

Short-Term Forecast Discussion

- A similar pattern on Friday is expected with very low end chances in the morning hours (~20%), slightly higher percentages coming in the afternoon for a few pop up hit and miss showers / t-storms. The next few days will be a case where 5-10 miles can be the difference between seeing multiple cells or staying totally dry.
- Friday will feature winds coming out of the SSW at 8-13 MPH and gusts to 15 MPH at the boarding station.
- Upper 80s will be the call for the day on Friday.
- *No fog is in the forecast for our Friday.*

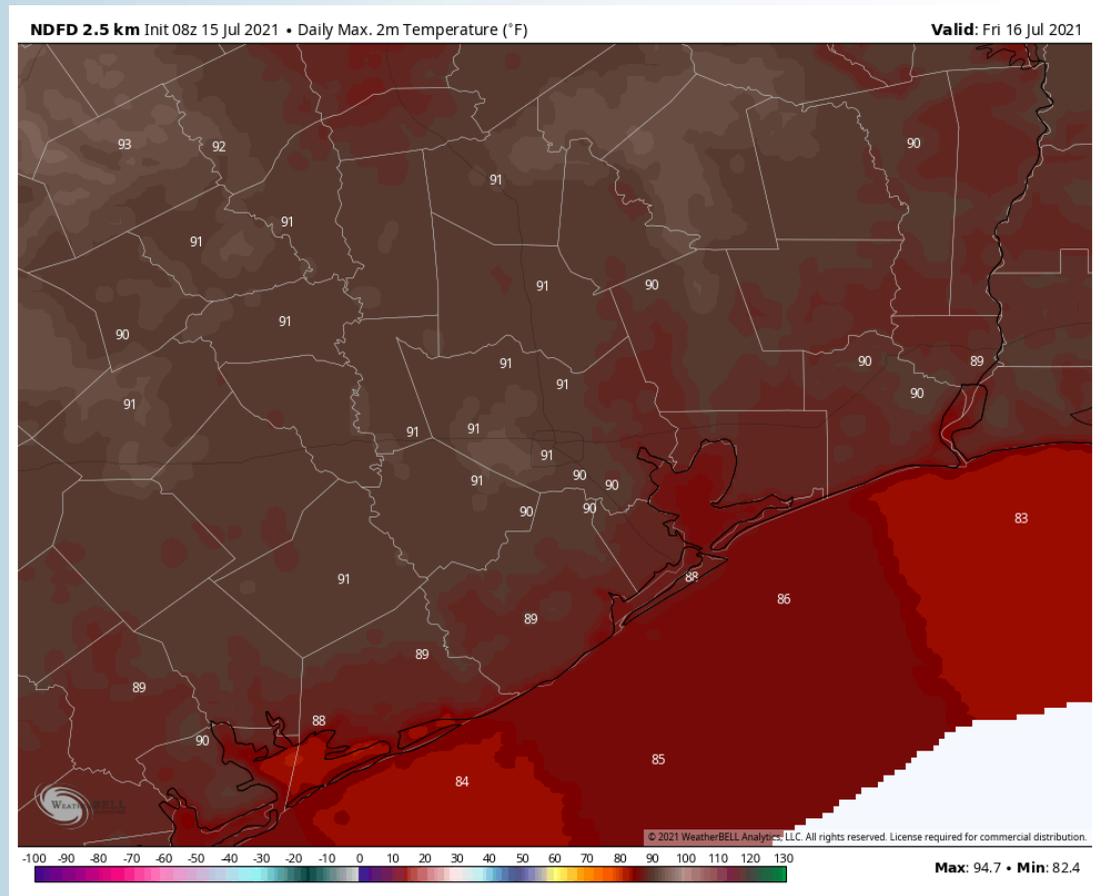

Sustained Winds (7 PM CT)

Simulated Radar Snapshot (7 AM CT)

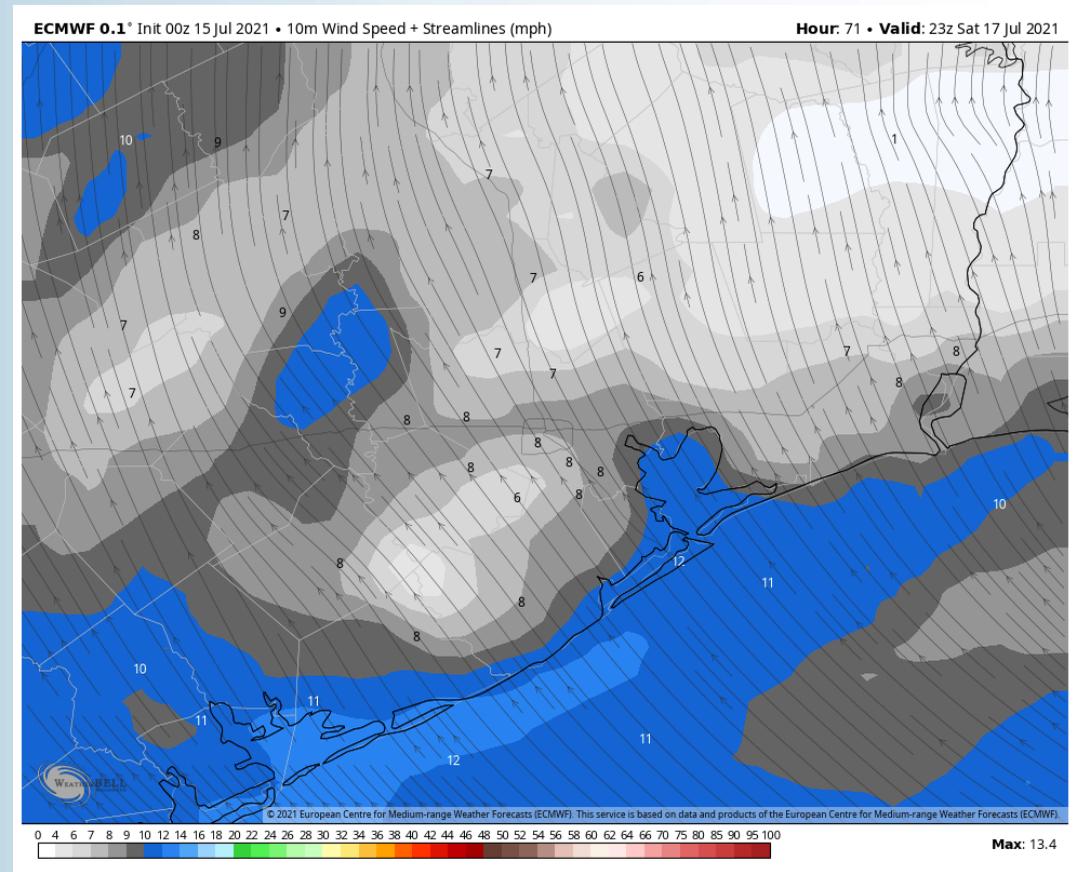

High Temps Friday

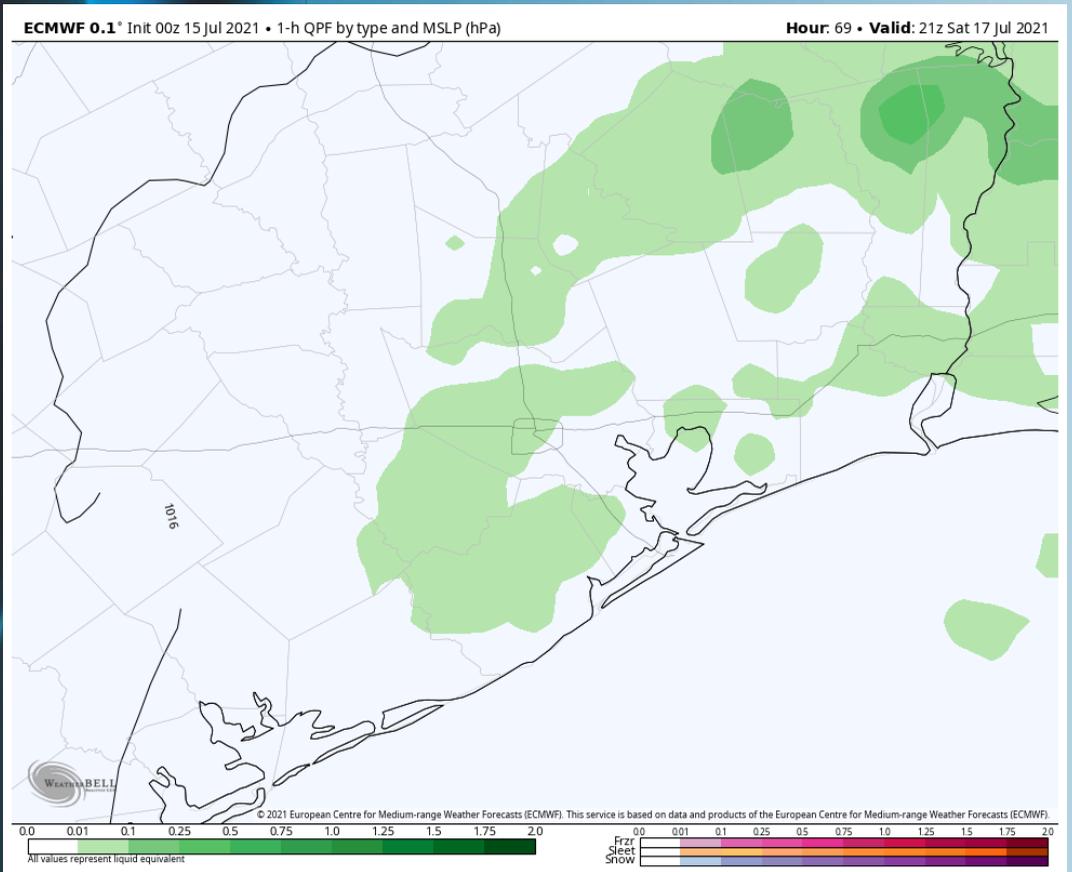

Short-Term Forecast Discussion

- Saturday will feature another day with precipitation chances with the best opportunity for precip coming in the PM hours. The pattern looks to be similar to the forecast the next few days.
- Winds will continue coming out of the SE at 8-13 MPH sustained with gusts 13-18 MPH possible at the boarding station. Slightly increased winds are possible inside a more moderate pulse of rain, but would be short lived.
- Persistence forecast with highs in the upper 80s / lower 90s expected.
- *No fog is in the forecast for Saturday.*

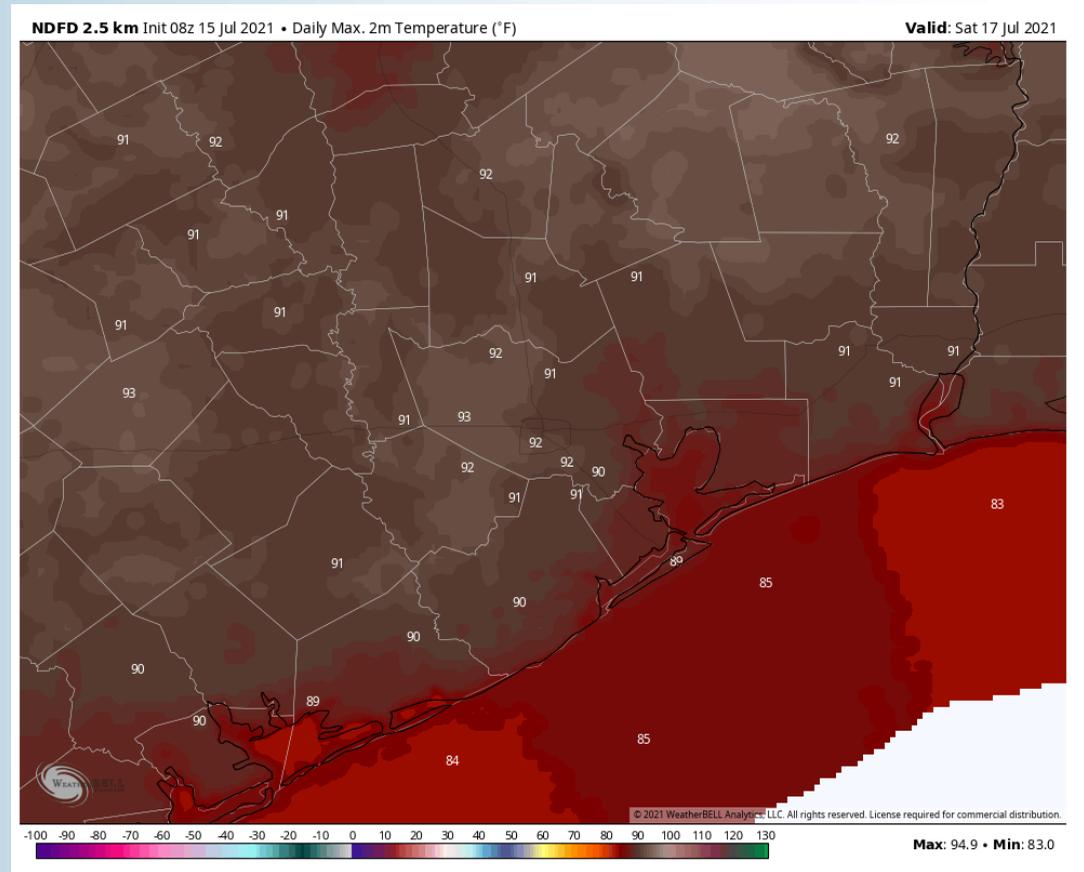

Sustained Winds (6 PM CT)

Simulated Radar Snapshot (4 PM CT)

High Temps Saturday

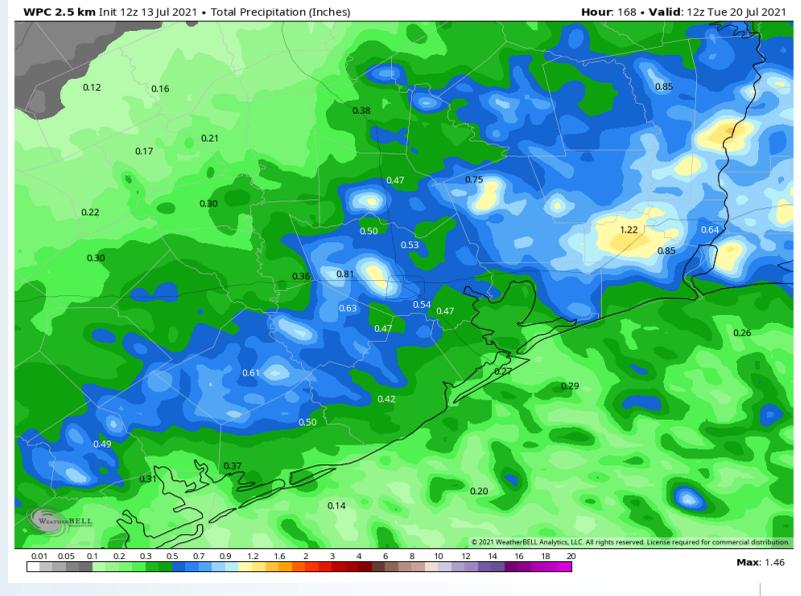

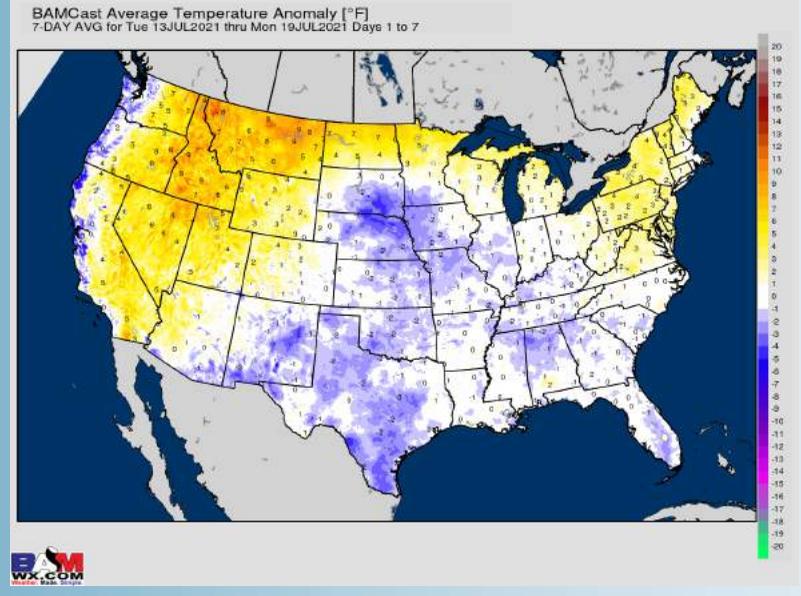

Long-Range Forecast Discussion

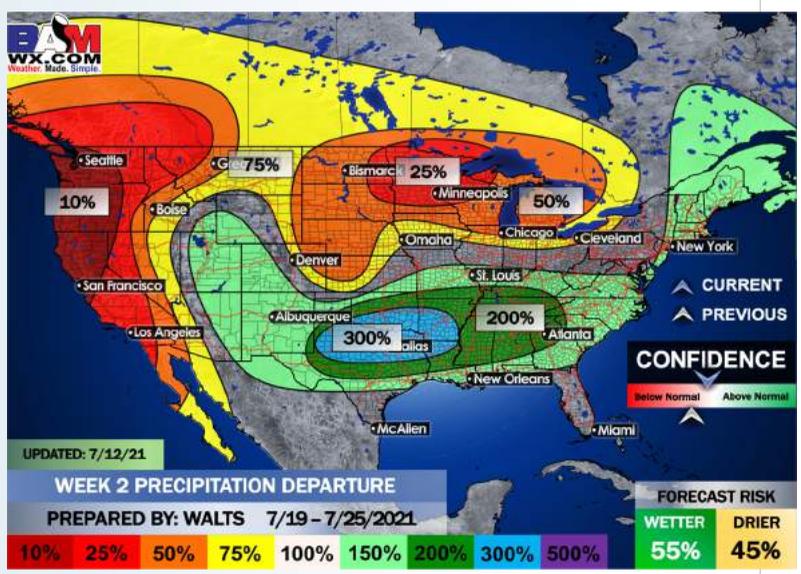

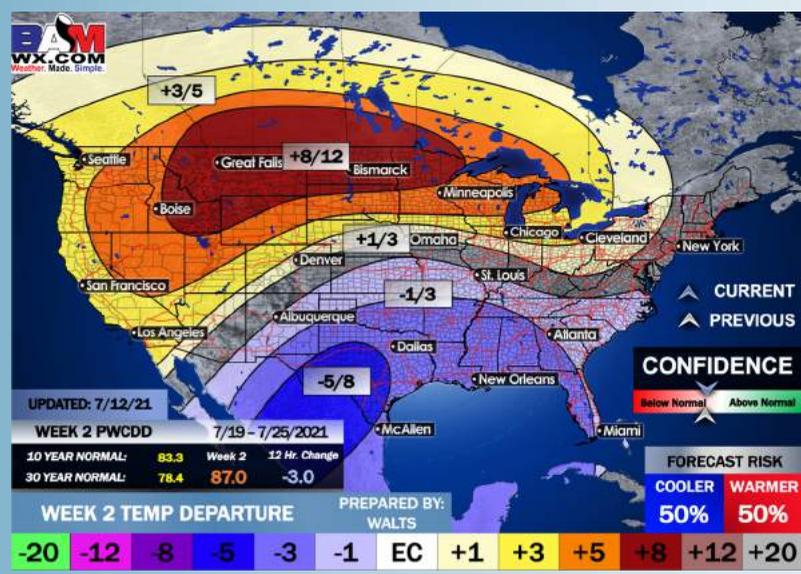

- The next 7 days will be much less active vs the previous few days with spotty chances from time to time. Temperatures look to remain at to just below normal as well.
- The pattern ahead looks to pick back up in regards to precipitation from normal in the week 2 period. Temperatures are anticipated to run below normal as well.

- The weeks ³/₄ (late July into August essentially) period likely features more seasonable to cooler than normal temperatures, while precipitation looks to run at or above normal in this period as well.
