10PM Weather Forecast

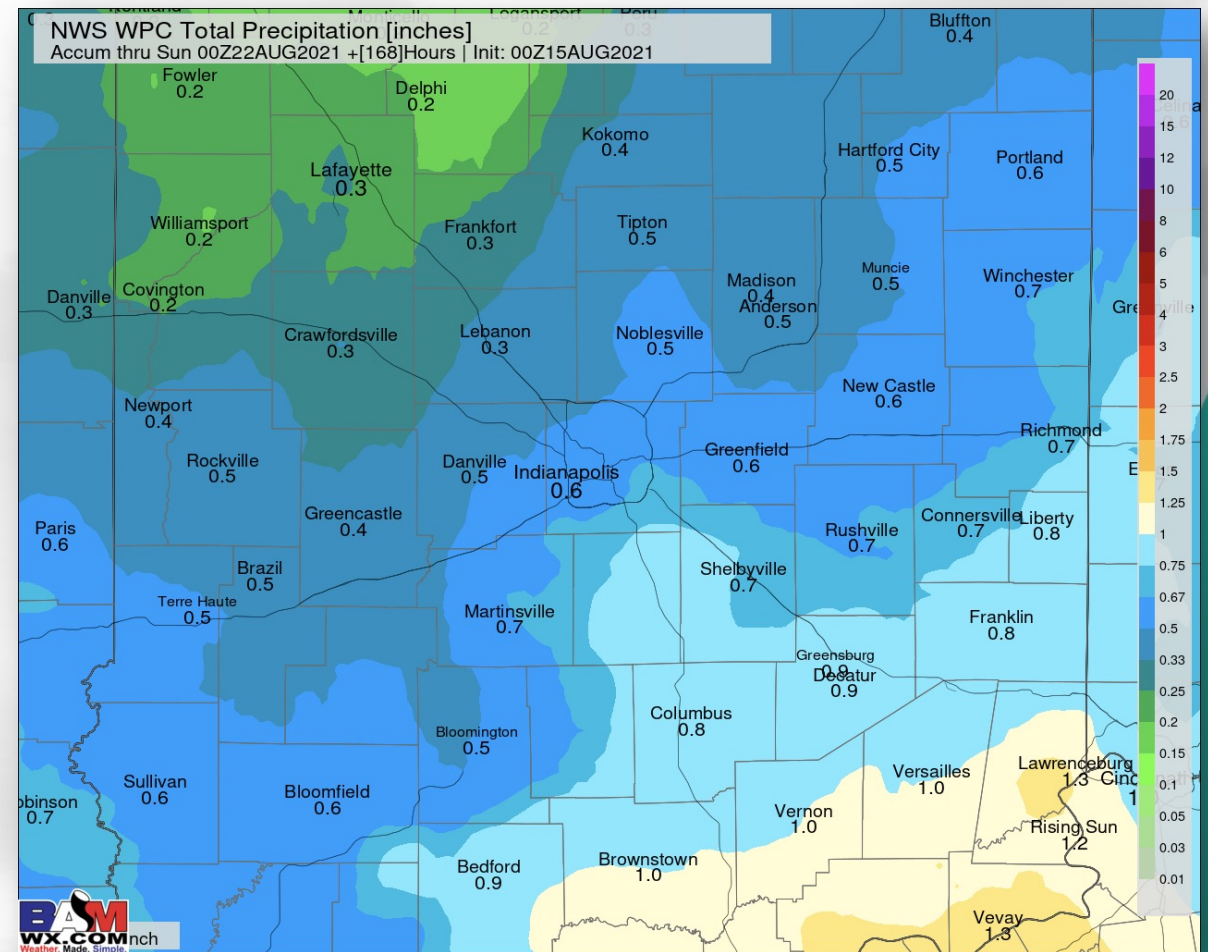

Saturday, August 14, 2021

5 Day Forecast Discussion: The idea remains dry into tonight and tomorrow with rain risks back Monday and increasing chances thereafter. However, some guidance was trying to pick up on some light rain chances as early as tomorrow afternoon (mainly south), but given a lot of dry air around, favoring it to be dry. Regardless, no lightning or storm threats expected. Monday chances at this distance look quite minor as well, mainly into the evening hours. TUE and WED look to offer up scattered storm chances, especially into the afternoon hours. Will need to keep a close eye on the track on tropical disturbance Fred to see how much moisture (or the lack thereof) can make it towards Indy on TUE/ WED. By Wednesday – Friday, Heat Index Values returning into the upper 80's F to possibly near 90F will be possible. It certainly looks like we'll see numerous rain chances this next week, but as we saw this past week, the dry conditions at the surface could be playing a role in making rain more difficult in Central IN.

10PM Weather Forecast

Saturday, August 14, 2021

Long Range Forecast Discussion & Scenarios: Cooler/drier/less humid weather for the weekend. Temps into early next week will take a dip back into the low-mid 80s, but late next week (~Wed and beyond) the potential for “feels like” temps to return to the upper 80s/ low 90s will be possible. Regarding precip, after a dry weekend, Monday is favored to be mostly dry with scattered rain showers associated with a low. Toward the middle of the upcoming week is when we favor increased precipitation chances as the upper level flow looks to turn a bit more favorable for precipitation. However, a minor shift south would mean the difference between solid rain and mostly dry conditions. We’ll keep an eye on weekend trends. We may get a few hotter days late next week, but we currently do not see signals for notable heat in the extended range – we could get another front to moderate conditions to close the fair next Sunday. The one thing going for rain chances this next week vs. the previous week is they are more tropical in nature which could make it easier to overcome some of the drier conditions near the surface (we are in the driest 4 week stretch in Indy to close July/begin August since 1940). Regardless, it does look like much of the activity will be in the PM hours with dry time even on days with rain.
