Short-Term Forecast Discussion

- While an isolated pocket or two of precip cannot be fully ruled out this morning given a boundary trying to work through the area, we are in favor of more drier time than not here this morning compared to the afternoon. The afternoon hours will introduce spotty, hit and miss pockets of precipitation- some of which could be locally heavier downpours and lighting will be possible.
- Winds will continue coming out of the S/SE at 8-13 MPH across the area.
- Upper 80s / lower 90s anticipated for most locations.
- *No fog is favored for today.*

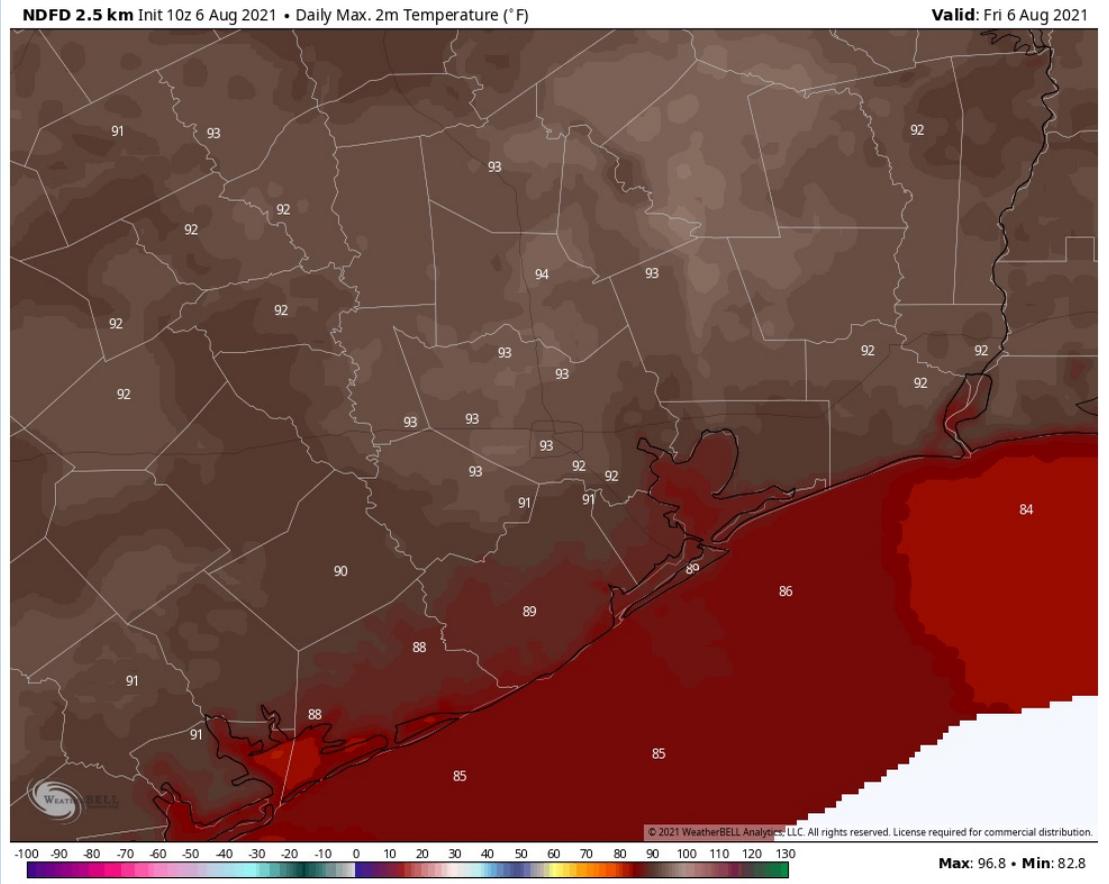

Sustained Winds (7 PM CT)

Simulated Radar Snapshot (6 PM CT)

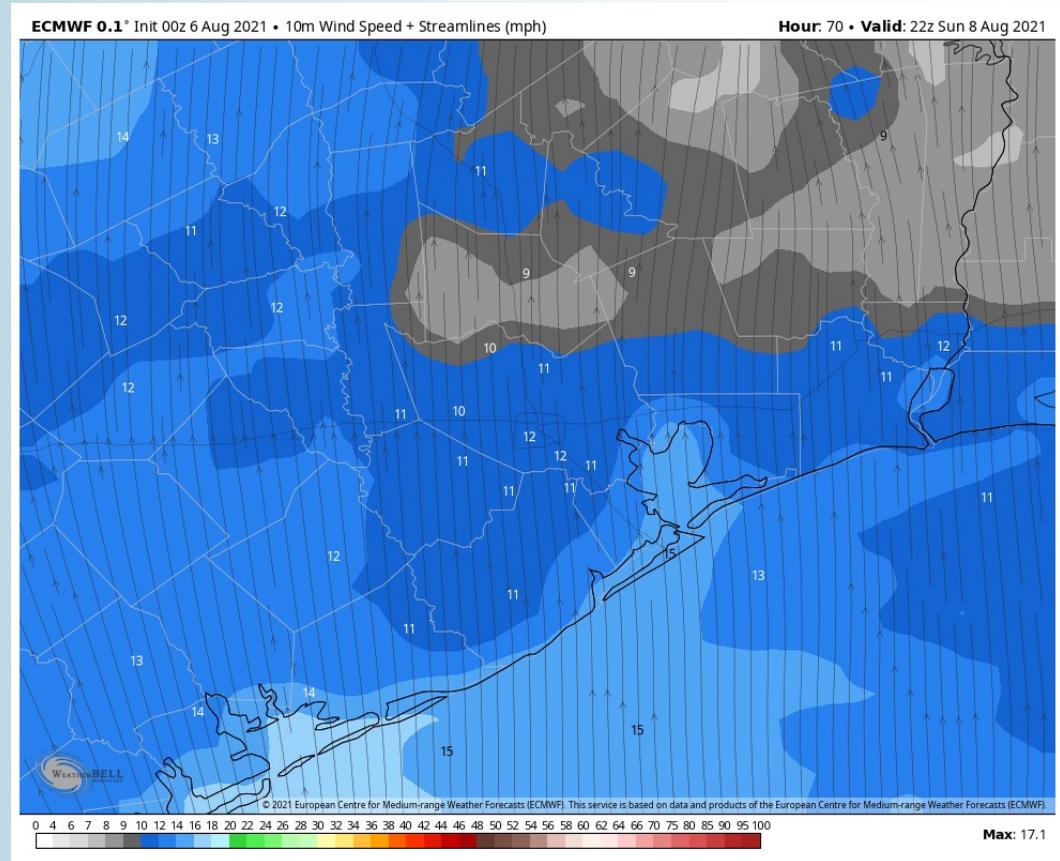

High Temps Today

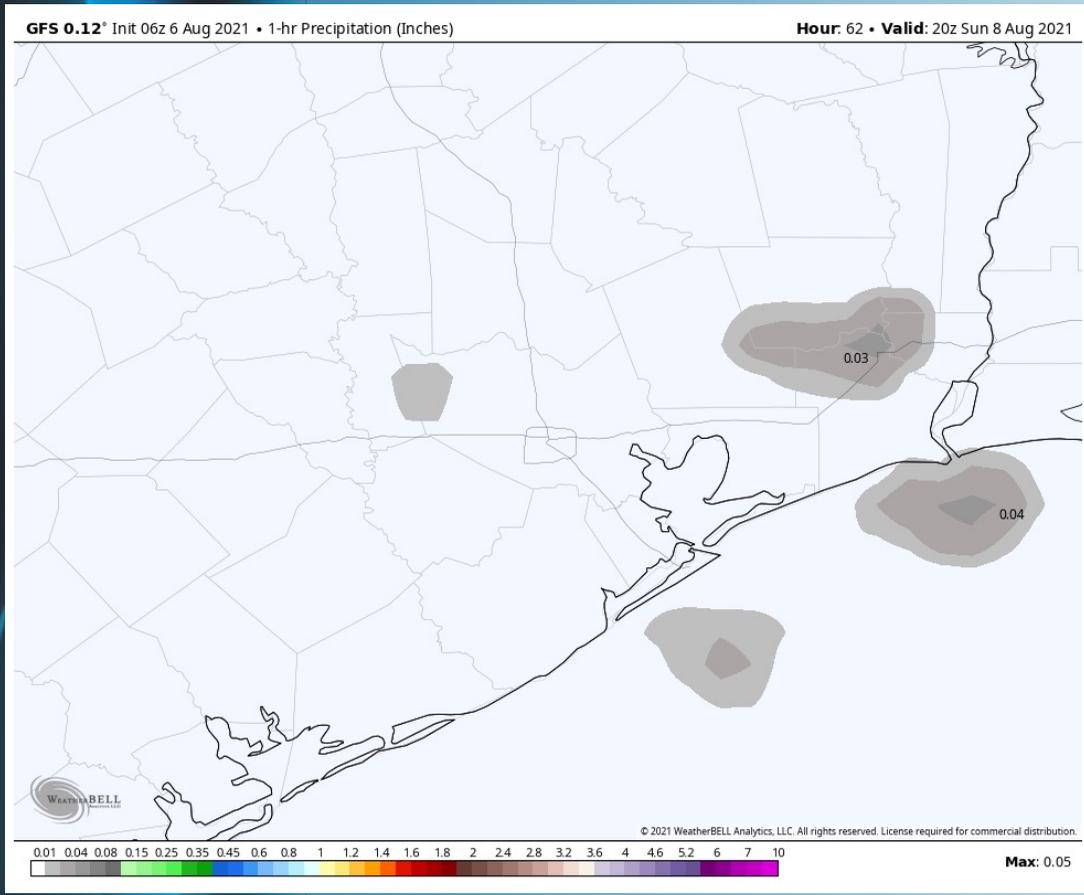

Short-Term Forecast Discussion

- Cannot call Sunday completely dry, but at this distance it looks like precip will be more isolated vs coverage today or tomorrow (Fri/Sat).
- Sunday we will favor winds to come out of the south at 8-13 MPH wit gusts to 15 MPH.
- Sunday looks to continue the theme of upper 80s/ lower 90s as highs for most.
- *Not favoring fog for Sunday.*

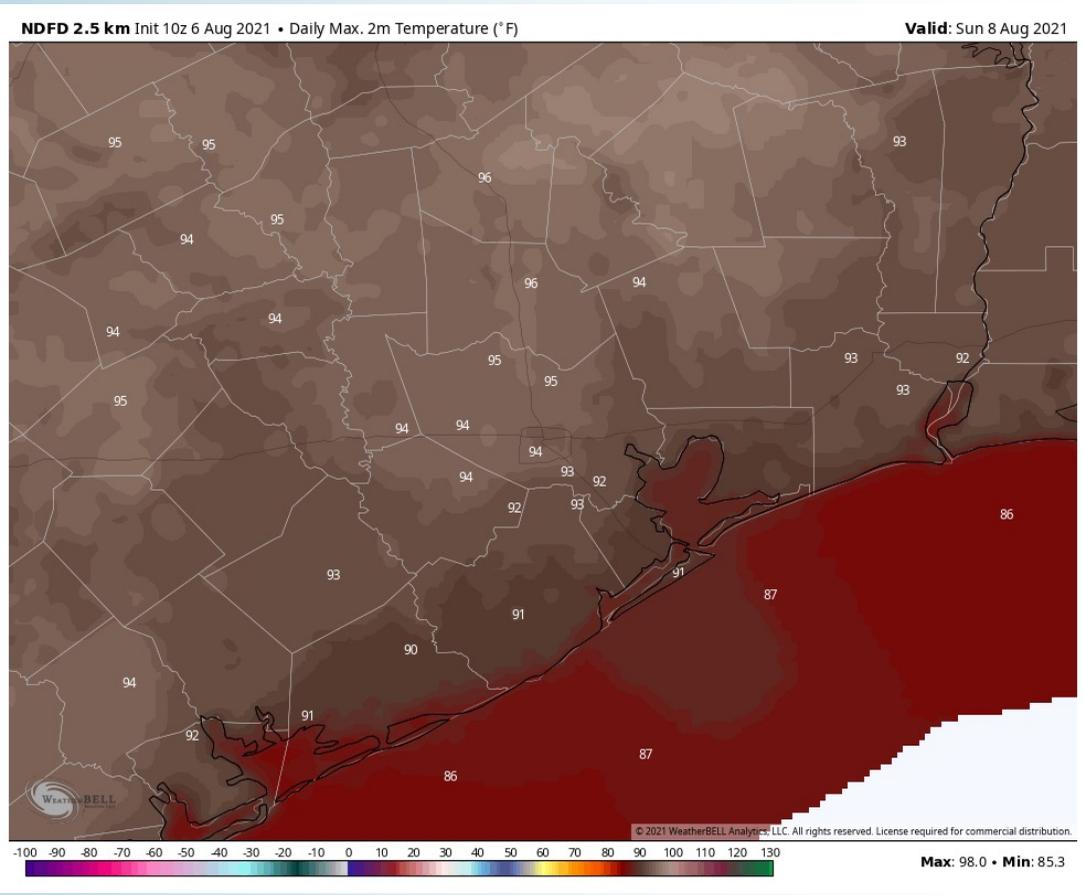

Sustained Winds (5 PM CT)

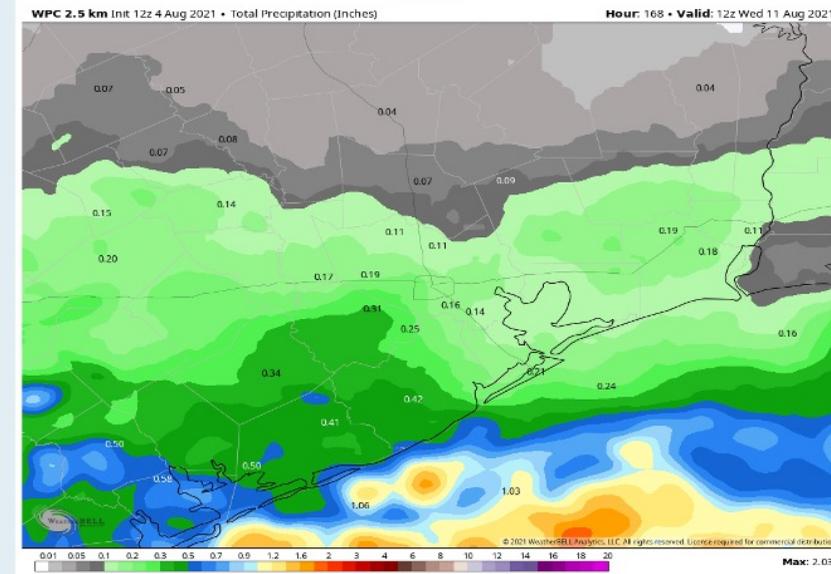

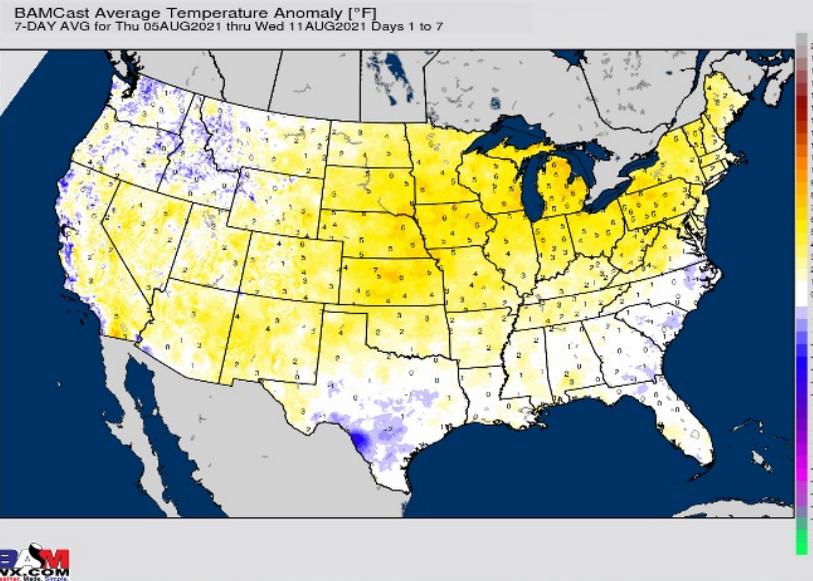

Simulated Radar Snapshot (4 PM CT)

High Temps Sunday

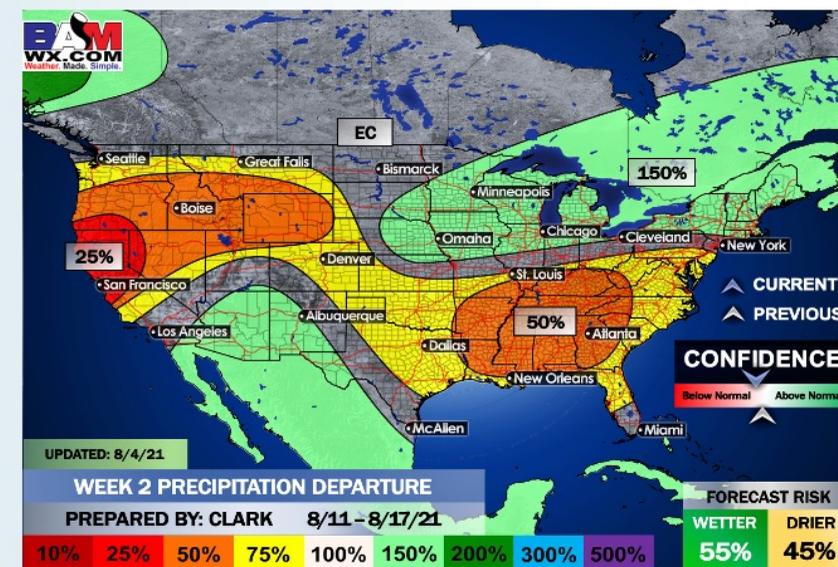

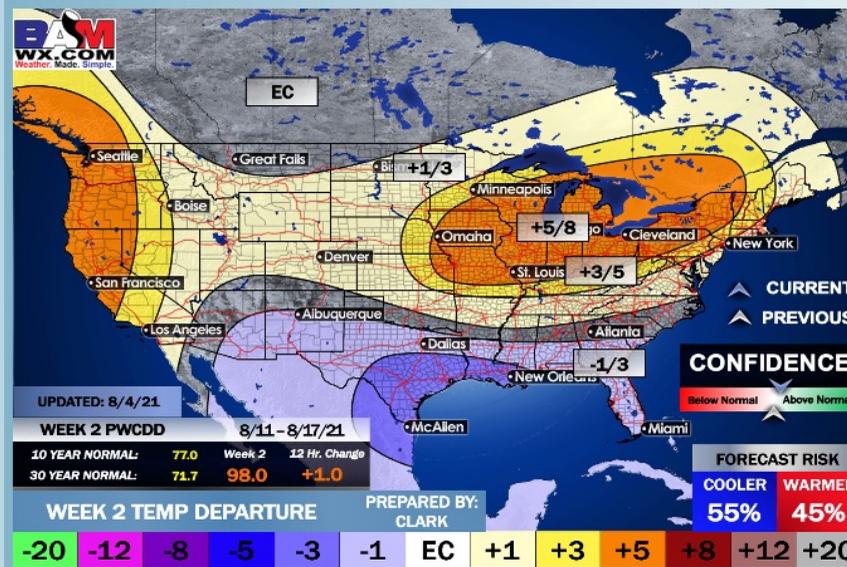

Week 1 Forecast

Long-Range Forecast Discussion

- We continue to deal with daily chances over the next 7 days, likely in a scattered fashion. Localized heavier amounts will be possible vs the image to the right. Overall temperatures look to sit near normal over the next 7 days.
- Cooler than normal temperatures and below average precipitation risks look to be present as we head into the 2nd week of August.
- Heading later into August, we still favor overall more of a pattern suited for below average temps and above average precipitation. This is the time period where we would anticipate an increase in tropical activity across the Atlantic.
