Houston Pilots Forecast Package

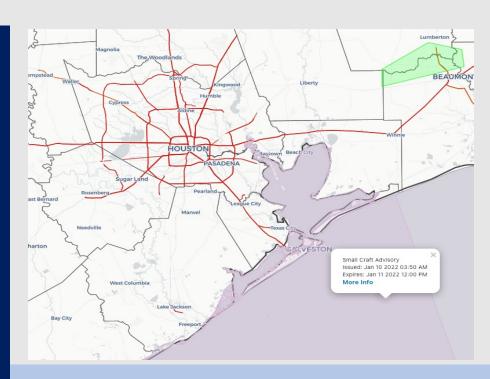

Updated: 5:00 AM CT

Monday, January 10, 2022

Forecaster: Vince Bryan

Weather Headlines

- Quiet weather is favored the next few days regarding precipitation. Next "best" chances come this weekend, however the signal for precip is pretty low as a whole.
- Through mid-day Tuesday, sustained winds from the N/NE @ 15-25+ MPH with gusts 25 – 35+ MPH expected (more details on daily slides).
- Because of winds, early week fog is not favored. Need to watch late week for fog chances to redevelop as discussed in the slides below.
- Next front to target looks to be ~Saturday where winds will become strong again of 20+ MPH.

Radar/ NWS Alerts: 5:00 AM CT

Houston Pilots Extended Range Visibility Report

Thursday, 1/13/22

With winds now more out of the south and light, the potential for fog Thu AM looks to be a little higher than Wed. Some data is already trying to pick up on reduced visibilities.

Friday, 1/14/22

Winds have trended slightly less favorable for fog on Friday. This will continue to be a day worth keeping an eye on for fog, but confidence has trended slightly lower.

Confidence

Above Below Normal Normal

Saturday, 1/15/22

Saturday's fog threat will all be about the timing of the next cold front. If the front stays as is with the passage being ~mid AM, there will be a brief window for sea fog. If the front speeds up at all, this threat would be diminished.

Confidence

Above Below Normal Normal

Above Normal Below Normal

Daily Fog Chance									
Thursday AM	Possible								
Friday AM	Possible								
Saturday AM	Possible								

Houston Pilots: Mon. 1/10/2022

Forecast Discussion

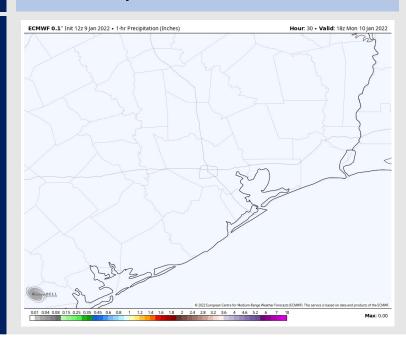

Precip: Dry conditions are anticipated for our stations today.

Wind: Sustained winds look to continue 23 - 28 MPH out of the N/NE at the boarding station for most of the day. Gusts 30 - 35 MPH will be possible for the entire day, with a few gusts 35-38 possible out through Noon.

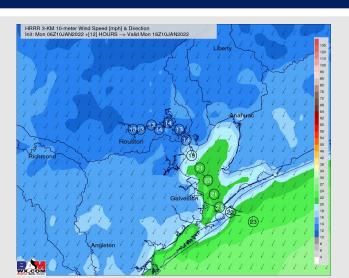

Temps: High temps look to only get into the upper 50s.

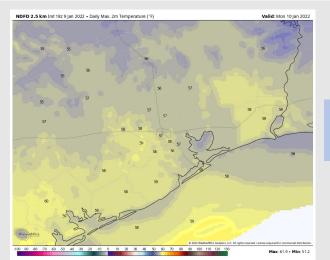

Visibility: Not anticipating fog today.

Precip Forecast: 12 PM CT

Wind Speed 11 AM CT

High Temps

Houston Pilots: Tue. 1/11/2022

Forecast Discussion

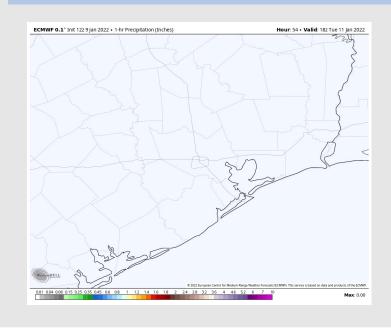

Precip: A 10% chance of a sprinkle comes after sundown, but favoring a dry day Tuesday.

Wind: Sustained winds look to continue 20-25 MPH out of the NE with gusts 25-30 MPH at the boarding station into Tue AM. Around 9-10 AM, winds look to slowly start decreasing at 18-23 MPH sustained. 13-18 MPH sustained by 1-2 PM is favored. Gusts 20-25 MPH continue to be possible at the boarding station through 2 PM. Sustained winds look to be 10-15 MPH with gusts 15-20 MPH by the 4-5 PM timeframe and continue through midnight at the boarding station. Winds start to veer more out of the ENE after sundown.

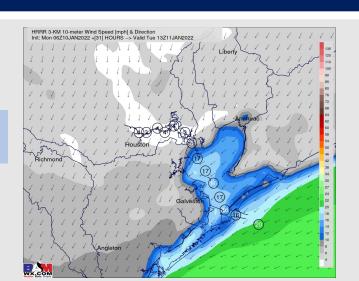

Temps: High temps on Tue look to continue to only get into the upper 50s.

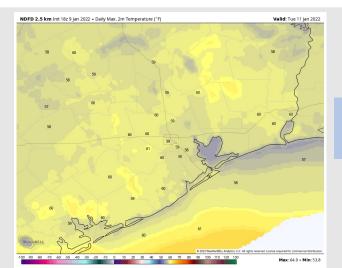

Visibility: Not anticipating fog for Tue with elevated NE winds continuing.

Precip Forecast: 12 PM CT

Wind Speed: 8 AM CT

High Temps Tuesday

Houston Pilots: Wed. 1/12/2022

Forecast Discussion

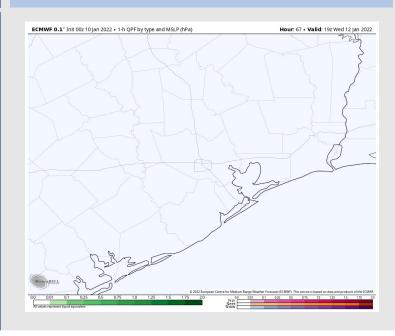

Precip: No precip currently in the forecast for Wednesday.

Wind: Winds Wednesday will be a bit tricky regarding specifics. Favoring a general Easterly wind on Wed, but think there will be periods of ENE and ESE winds. 8-13 MPH sustained will be possible at the boarding station out through 11 AM before turning closer to 5-10 MPH. The calmer winds continue into Thu AM and allow for potential fog development.

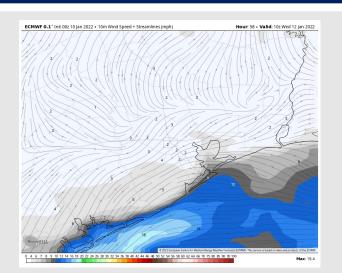

Temps: Wednesday's highs top out in the mid 60s.

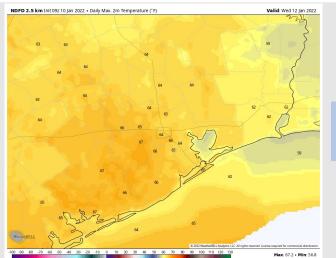

Visibility: Wednesday needs to be monitored for fog potential, however we think right now that winds will not be in a favorable direction for fog long enough. Better chances looking to come Thu/Fri.

Precip Forecast: 12 PM CT

Wind Speed 5 AM CT

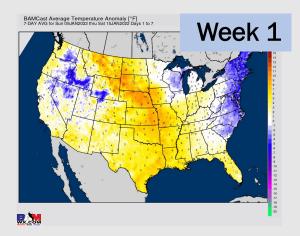

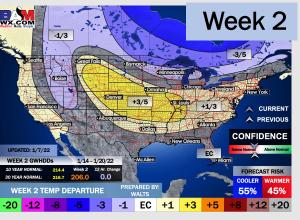

High Temps Wednesday

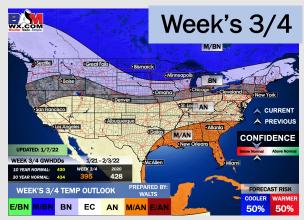

Houston Pilots: 1/10/22

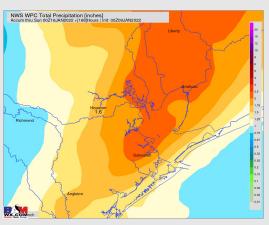

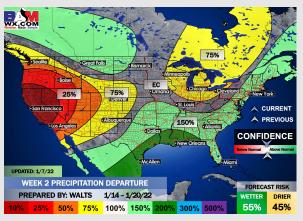

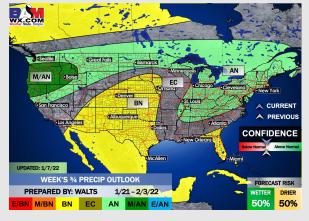

- After scattered showers/thunderstorms today, anticipating dry conditions for the next several days, with next front anticipated Fri/Sat. After cooler temps the first half of the work week, temps rebound to average out above normal.
- The week 2 timeframe is expected to have near normal temperatures with above normal risks for precip.
- Right now, we are favoring above normal risks for temperatures and slightly below normal risks for precip for the weeks 3 and 4 timeframe.
