# Houston Pilots Forecast Package

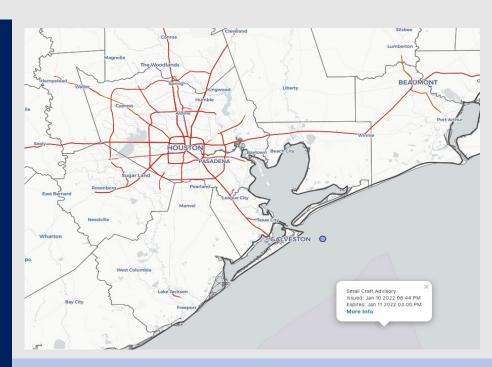

Updated: 1:00 PM CT

Tuesday, January 11, 2022

Forecaster: Vince Bryan

## Weather Headlines

- Quiet weather is favored the next few days regarding precipitation with a small shot of some light precip coming late tonight into the overnight
- Winds will slowly continue to die down through the day, turning 10-15 MPH (more details on today's slide).
- Late week fog chances are still present, but the threat has diminished vs the thinking a few days ago as data has backed off of a persistent SE wind. Regardless, still a period to watch Thursday into early Saturday AM.
- Continue to eye the next front Saturday AM that will bring elevated winds of 15-25+ MPH sustained.

Radar/ NWS Alerts: 1:00 PM CT

## Houston Pilots Extended Range Visibility Report

#### Friday, 1/14/22

Winds continue out of the N/NW for Fri AM, this is not favorable for sea fog, however, with winds relatively light, it is worth keeping an eye on for fog development. Fri night does look more favorable for sea fog with winds out of the south now.

### Saturday, 1/15/22

The wind shift with the upcoming front has trended quicker for Sat AM. Winds look to be elevated and out of the NW for most of the AM hours of Sat (not favorable for fog), however, sea fog from Fri night/overnight continuing in the early morning hours of Sat look to be possible.

# Above Below Normal

## Sunday, 1/16/22

Currently not anticipating fog at our stations for Sun AM with elevated winds still out of the north.

Confidence							
Above	Below						
Normal	Normal						

Daily Fog Chance									
Friday AM	Possible								
Saturday AM	Possible								
Sunday AM	Unlikely								

# Houston Pilots: Tue. 1/11/2022

## **Forecast Discussion**

Precip: Continuing to watch for a round of scattered light rain showers possible starting around ~9 PM tonight and being around until the early AM hours of tomorrow. Total accumulations would be a Trace to a tenth of an inch and no severe weather is expected.

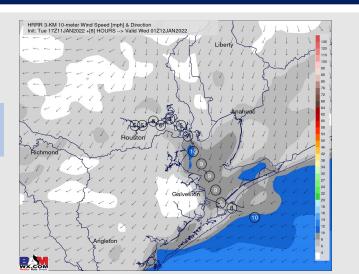

Wind: Sustained winds look to be 10-15 MPH with gusts 15-20 MPH by the 3-4 PM timeframe and continue through midnight at the boarding station. Winds likely continue out of the ENE.

Temps: Lows tonight fall back to the lower 50s.

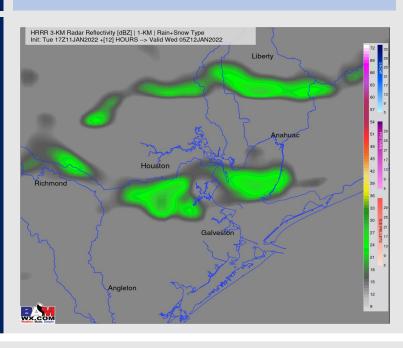

Visibility: Not anticipating fog with elevated NE winds continuing.

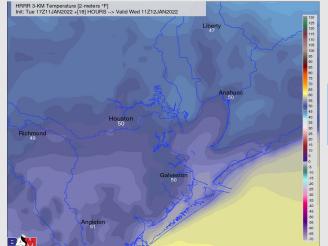

Wind Speed:

**11 AM CT** 

#### Precip Forecast: 11 PM CT

Low Temps Wed AM

# Houston Pilots: Wed. 1/12/2022

## **Forecast Discussion**

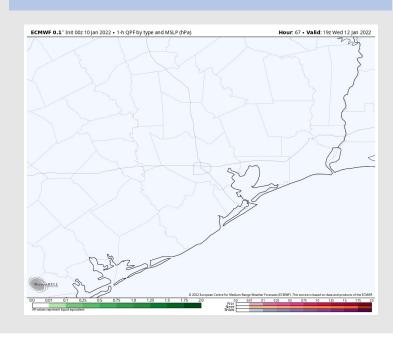

*Precip:* Any sprinkles in the pre-dawn hours Wednesday would be out by sunrise and lead to no precip in the forecast for the rest of the day.

Wind: Winds Wednesday will be a bit tricky regarding specifics. Favoring a general Easterly wind on Wed, but think there will be periods of ENE and ESE winds (mainly in the morning and afternoon, respectively). 8-13 MPH sustained will be possible at the boarding station out through 11 AM before turning closer to 5-10 MPH. Calmer winds expected into the overnight.

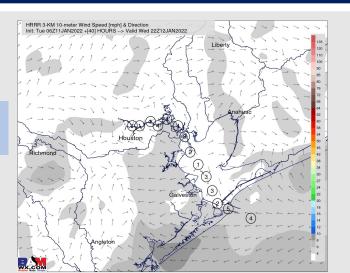

Temps: Wednesday's highs top out in the mid 60s.

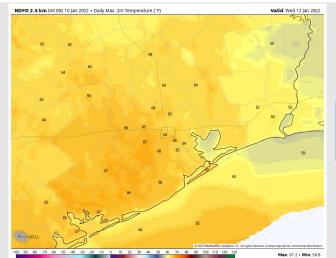

Visibility: Currently not anticipating fog for Wednesday as winds will not be consistently SE enough to build sea fog.

#### Precip Forecast: 12 PM CT

Wind Speed 4 PM CT

High Temps Wednesday

# Houston Pilots: Thu. 1/13/2022

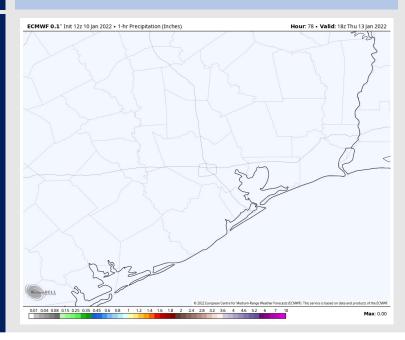

## **Forecast Discussion**

*Precip:* Dry conditions are anticipated to continue for Thursday. Wind: Sustained winds on Thu look to be 5-10 MPH generally out of the west at the boarding station for most of the day. Winds can turn more out of the WNW at times throughout the day. After sundown and beyond, winds look to start coming out of the NW more.

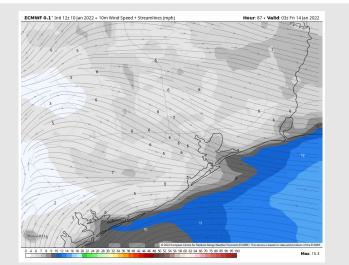

Temps: High temps Thu look to sit in the mid to upper 60s F.

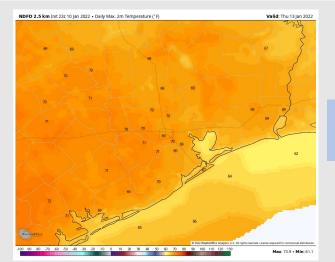

Visibility: Sea fog is currently not favored for Thursday. May have to watch for some fog further inland that could impact our extreme N stations if the fog verifies, but winds have trended away from a consistent SE wind and thus, have lowered fog threat.

#### Precip Forecast: 12 PM CT

Wind Speed 9 PM CT

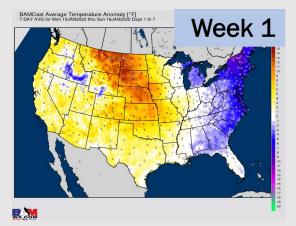

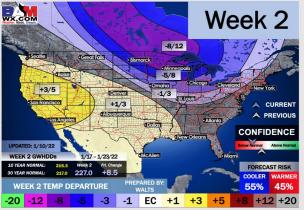

High Temps Thursday

## Houston Pilots: 1/10/22

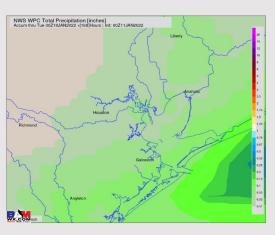

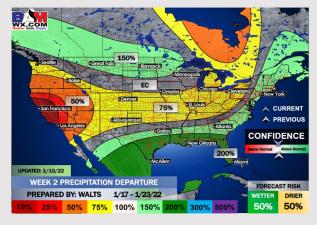

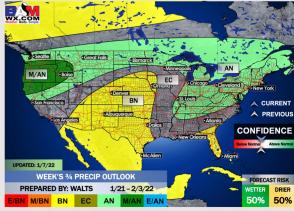

- Anticipating dry conditions for the next several days, with next front anticipated Fri/Sat. After cooler temps for the first half of the work week, temps rebound to average out above normal.
- > The week 2 timeframe is expected to have near normal temperatures with above normal risks for precip.
- Right now, we are favoring above normal risks for temperatures and slightly below normal risks for precip for the weeks 3 and 4 timeframe.
