- Overall, the best storm track is north of the Houston Area leading to minimal precipitation chances. The only thing we will need to watch is for potential storm clusters to sag further south vs what data currently has. No clear signal any cluster would do this however leading to an overall less active and drier next 7 days. Temperatures to run above normal.
- The better track for storm systems looks to be to the north of Houston. Will likely be some chance of moisture but expecting near normal amounts. Temperatures to continue to run above normal.
- Continue to anticipate the best storm threat to stay north of the HOU area. This will keep temperatures up and moisture risks at below normal for the weeks ¾ timeframe.
