Organized Tropical Activity Not Expected

Confidence is above average that both of these potential systems stay "out to sea" in the Atlantic and are not a threat to the Gulf.

No direct tropical threat for Houston expected over the next 7 days, however there are a few systems in the Atlantic we are monitoring. These are favored to stay in the Atlantic moving forward. With that said, the active pattern of daily rain chances likely continue for the next several days.

Forecast Discussion

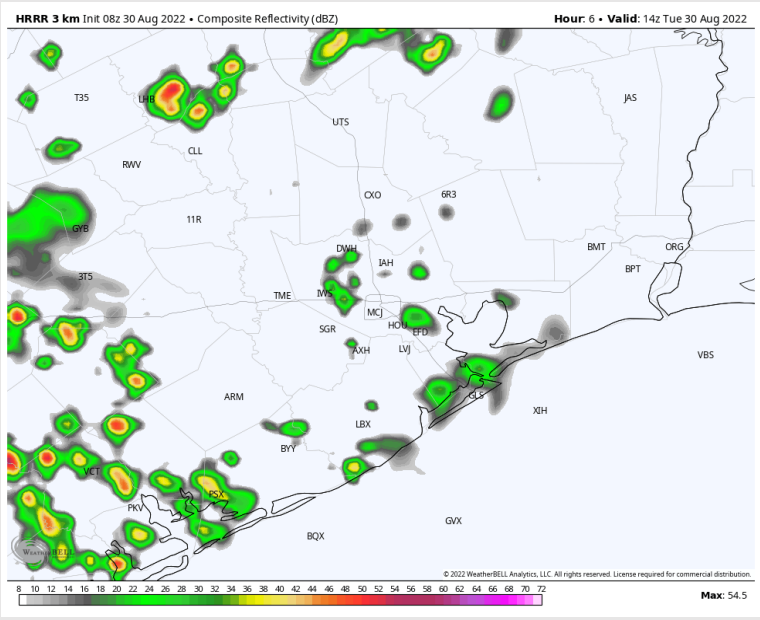

Precip: Scattered 30% chances for showers/storms beginning around 6AM Today. Between 9AM-5PM coverage will increase to 40-50% with chances decreasing after 5PM to 30%. Data has trended weaker with the idea of early afternoon more widespread rains as things look to be a bit more sporadic. As has been the theme the past few days, locally heavy downpours, gusty winds, and lightning all are possible under stronger cells.

Wind: Outside of precip, winds out of the SSE at 8-13 MPH will be favored at the boarding station much of the day. However, winds can increase with gusts 20-30 MPH possible embedded in heavier pockets of thunderstorms. This is not expected to be widespread. Winds calm some into the evening/overnight hours at the boarding station to 3-8 MPH sustained.

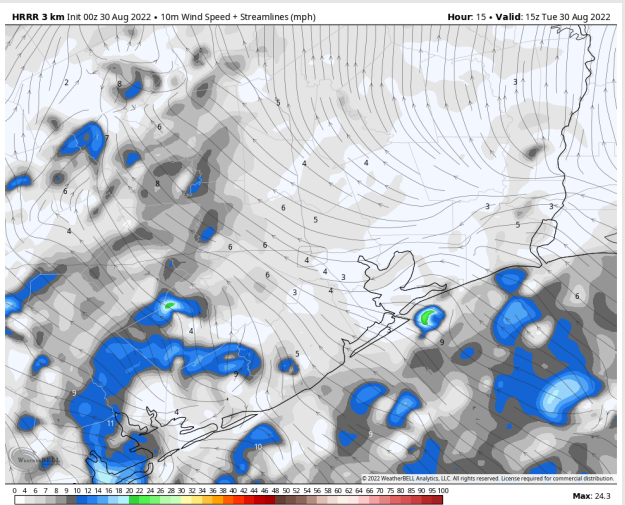

Temps: High temps in the mid 80s F near the boarding station and near 90s F at all other stations.

Visibility: Not anticipating fog concerns at this time, but heavy rain will reduce visibility.
