Weather Headlines

- Sea fog is almost certain to build back in across the Boarding Station and 11/12 towards sundown this PM, with it slowly pressing north throughout the late evening. Check the visibility slides for updated thoughts on fog.
- Isolated shower chances on the order of <20% are expected through at least mid-week. This looks like a rather low-end risk.
- Winds will continue primarily out of the south (with variations to SW) over the coming days. A weak front tries to work in tomorrow, but likely struggles to change wind direction. The best chance for elevated winds will arrive today with winds in the 15 20 kt range.
- Wave heights of 5-7 feet will be possible after ~9 AN Wednesday through 6 PM.
