Houston Pilots: Mon. 5/8/2023

Forecast Discussion

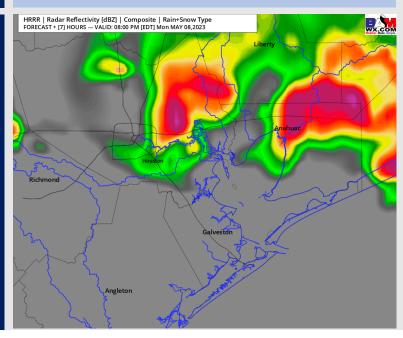

Precip: Favoring dry conditions through 5 PM with a 20% chance for a scattered shower or thunderstorm. After 5 PM chances will increase to 40% for stations north of 63/64. After 10 PM scattered activity will exit the area, leaving dry conditions for the early AM hours Tuesday.

Wind: Favoring winds to remain from the SE for the afternoon and evening hours. Winds across all stations will range at 12 – 17 kts. After 8 PM wind gusts south of Morgan's Point can range from 22 – 26 kts.

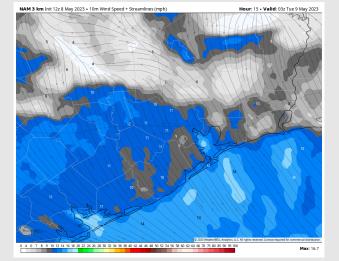

Temps: Low temperatures Tuesday morning across all stations will be in the mid 70s F.

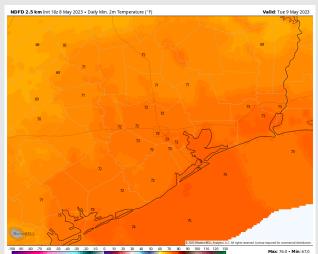

Visibility: Not anticipating any visibility concerns at this time, however a low cloud deck of 4-6 miles will be possible at the boarding station towards 3 AM.

Wind Speed: 10 PM CT

Low Temps Tuesday AM

Houston Pilots: Tue. 5/9/2023

Forecast Discussion

Precip: Isolated showers and storms will be possible in the morning on Tuesday (10-20%). Lower confidence on exact timing, but chances will become more widespread around in the early afternoon hours (~1-3 PM) timeframe and last throughout the rest of the day on Tuesday. A low-end risk for hail exists with any thunderstorms Tuesday PM.

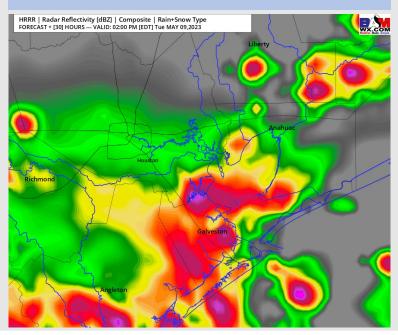

Wind: Sustained winds Tuesday out of the SE at 12 - 17 kts south of Morgan's Point and 5 - 10 kts north of Morgan's Point. Winds will pick up to 15 - 20 kts in the afternoon south of Morgan's point and 7 - 12 kts north of Morgan's Point. Towards about 8 PM winds will subside slightly north of Morgan's Point to 4 - 9 kts. Gusts Tuesday PM have potential to reach 30-35 kts under strong cells.

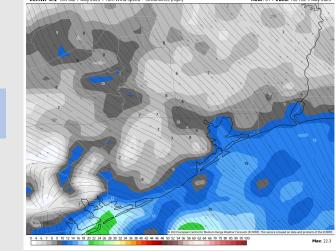

Temps: High temps Tuesday in the mid to upper 70s F at the Boarding Station and in the low to mid 80s F for all other stations.

Visibility: Not anticipating any fog concerns Tuesday, however strong storms may reduce visibility at times to 1-2 miles.

High Temps Tuesday

Houston Pilots: Wed. 5/10/2023

Forecast Discussion

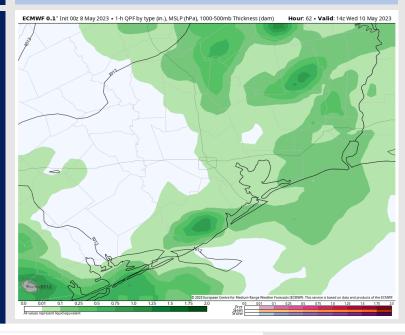

Precip: Some differences remain on the progression from storms later Tuesday into Wednesday, but currently favoring scattered showers and thunderstorms to work through the area in the AM hours before things turn more isolated into the afternoon hours, with better precipitation chances drifting north towards 5 PM. A locally strong to severe storm will be possible as energy moves through the area.

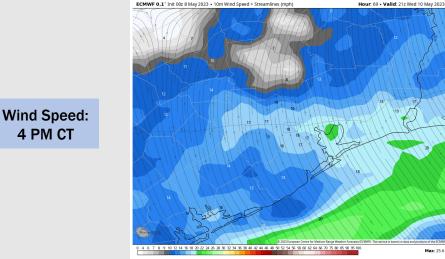

Wind: Sustained winds Wednesday will remain from the SE. Winds at the Boarding Station will sit at 16 - 21 kts sustained with gusts 20-25 knots. Winds north of the Boarding Station to Morgan's point will be 12 – 17 kts. Towards about 5 – 6 PM winds across all stations will calm to 9 – 14 kts. Locally higher gusts will be possible under any strong storms in the AM hours.

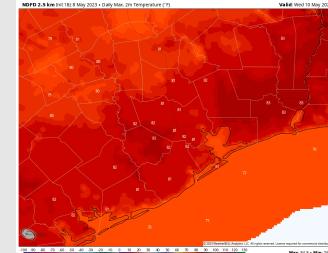

Temps: High temperatures Wednesday will be in the lower 80s and upper 70s F at the Boarding Station.

Visibility: Not anticipating any fog concerns Wednesday, but reduced visibility within stronger storms will be possible.

Precip Image: 9 AM CT

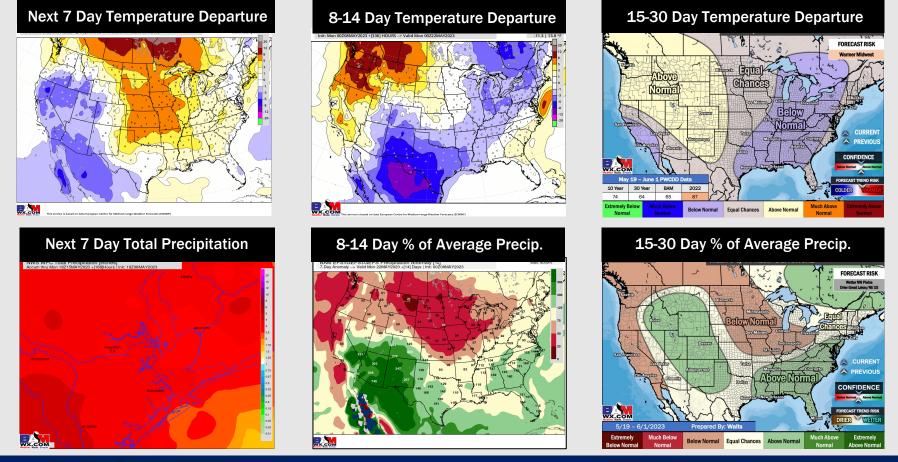

High Temps Wednesday

Houston Pilots: 5/8/23

- Best precip overall looks to sit further west in Central TX, with low end chances for precip over the coming days. The second half of week 1 holds the greatest rain risk. Temperatures slightly above normal for this time of year.
- Expecting near normal precipitation chances and slightly below normal temperatures for the week
 2 timeframe.
- Below normal temperatures and slightly above normal chances for precipitation are favored in the week ³/₄ timeframe.
