5-Day Rainfall Map

NEXT 5 DAYS: IMPORTANT FORECAST NOTES (as of 10 PM ET, 7/30/23):

Precipitation:

- ✓ **TUE-WED:** Current thinking is that this period is primarily dry. Need to watch Wednesday for an isolated risk of precip.
- ✓ **THU - FRI:** Next best risk for hit/miss rain/storms comes Thursday. At this distance, stronger storms would be possible, but the best threat for now remains to the southwest. Model data continues to trend storm clusters to the SW.
- ✓ **SAT:** Isolated rain chances are possible Saturday, with the best potential coming in the late evening post 8 PM.

Temperatures:

- ✓ Temps will cool off some over the coming days with highs in the mid 80s.
- ✓ Best shot of seeing upper 80s work back into the picture next Thu-Fri and will persist through Saturday.

Wind/Clouds:

- ✓ Winds outside of storms do not look to be a concern in the coming days.
- ✓ Partly to mostly sunny skies anticipated in the next couple days ahead. A mix of sun and clouds will be present for WED/THU
