## Hazardous Weather Alerts:

### Air Quality Alert

#### Current Radar 12:55 PM MON

## IMPORTANT FORECAST NOTES (as of 1:00 PM ET, 7/17/23):

- ✓ Moving up the potential for scattered storms up vs the AM forecast. Will need to watch as early as 2 PM for scattered, hit and miss thunderstorms. Coverage is anticipated to pick up after 2 PM for roughly 30 - 40 % chances into mid afternoon. Continue to favor the 6 - 8 PM timeframe for the greatest threat for more of a widespread shot of moisture.
- ✓ Strongest of storms will be capable of wind gusts of 40 + MPH as well as hail.
- ✓ After 8 - 9 PM, current thinking is that any activity would be more isolated. However, "upward" motion in the atmosphere sticks around meaning the chances will persist into tomorrow morning, likely in a spotty nature.

## Dew Forecast

- ✓ Dew will continue to be possible into tomorrow morning in addition to minor precipitation chances

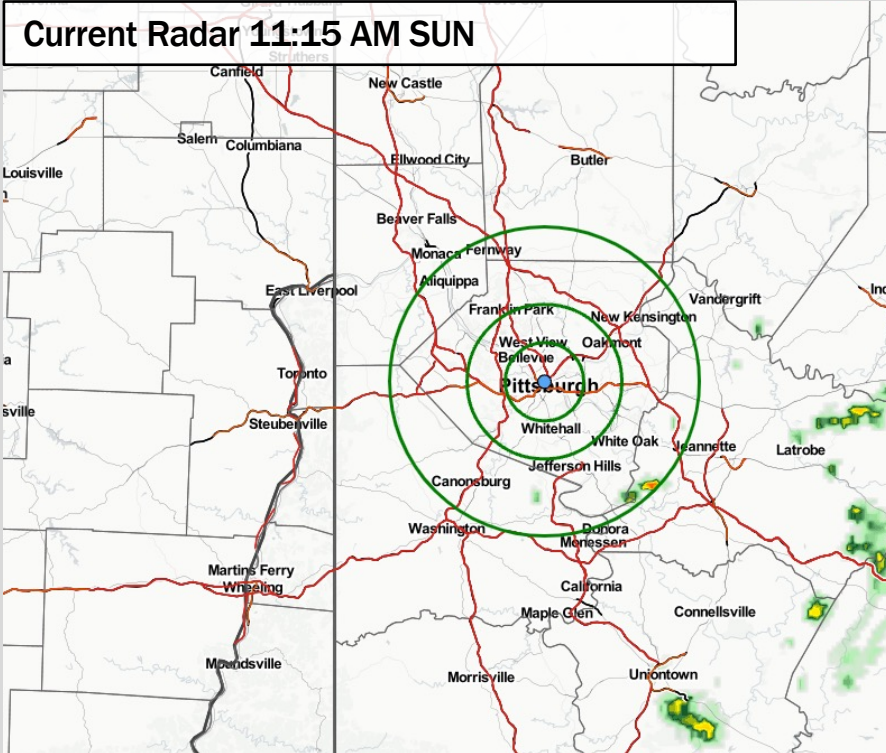

## HOUR BY HOUR FORECAST:

**ALL CLEAR**

## IMPORTANT FORECAST NOTES (as of 11:15 AM ET, 7/17/23):

- ✓ Hit/miss light showers will still be possible through 12 PM before chances move to the east. These will be quick moving cells (~5-10 minutes) and produce trace-0.05" if caught under a cell. Dry conditions anticipated from 12-6 PM.
- ✓ Temperatures are expected to be in the low/mid 80s F this afternoon. Winds will be 5-10 MPH out of the W/NW after 12 PM for the rest of the day.
- ✓ Conditions after 6 PM and into the early morning tomorrow are expected to remain mostly dry outside of isolated light/moderate showers through 5 AM. Any rain showers after 6 PM will be able to produce 0.1-0.2" under a more moderate cell.
