8 AM Weather Forecast

## Hour by Hour Forecast:

## FORECAST NOTES

### Today's Precipitation Chances:

Favoring Dry Conditions today.

### Favored Snowfall Totals

(Monday AM) 0.1-0.25" → We would need to watch near 6 AM CT Monday AM for sleet/snow showers to enter. Snow can start for about 1-2 hours before changing over to sleet for the remaining AM hours. Favoring potential for around 0.2-0.4" of sleet from 6 AM - 12 PM Monday.

### Dew/Frost:

While not favored, there would be about a 10-20% chance for light frosting from about 12 AM - 4 AM. Granted cloud cover increases in the early AM, this would be the biggest limiting factor for frost.

## Current Weather Alerts:

All Clear

### Temperatures:

- ✓ High temperatures today expected to reach near 20 - 22 F.
- ✓ Low temperatures Monday AM will be near steady, around 19 F towards midnight. Temperatures will begin to warm during the early AM hours of Monday

### Wind/Clouds:

- ✓ Wind speeds will be at 8 - 13 mph today with gusts of up to 19 - 24 mph through 6 PM after 6 PM gusts can uptick a tad to 23 - 28 mph.
- ✓ Skies will be mostly sunny throughout the AM but would need to watch for cirrus clouds (high wispy clouds in the atmosphere) to work in towards sunset that will start to turn skies partly cloudy.

## Potential Ice Accumulation: MON 6 PM - TUE 12 PM CT

## NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

### Precipitation:

- ✓ **MON:** Need to watch for snow showers to start near 6-8 AM, followed by a period of sleet for the late AM. Would have to watch anywhere from 10 AM - 2 PM for a changeover to freezing rain through at least 10 PM
- ✓ **TUE:** Low confidence is present on a changeover time from freezing rain to rain, but this changeover can occur from about 11 PM MON - 3 AM TUE. After 3 AM rain is favored as temperatures will warm above 32 F. Drier air works into the backside of the system near sunrise Tuesday, and light drizzle will still be possible for the AM hours (temps remain above 32 F). Most rain chances exit near 6 PM.
- ✓ **WED:** Second wave of rain presses in from the south in the late AM, and light rain can linger into the PM
- ✓ **THU:** Scattered rain chances in the AM become more isolated in the PM. Rain chances look to exit late in the evening.
- ✓ **FRI:** Favoring dry conditions with a slight chance of rain in the AM.

### Temperatures:

- ✓ Today will be the last day for below normal temperatures in the low 20s before more seasonable air works in with temperatures remaining near steady for highs in the mid to upper 30s F.
- ✓ Late week temps THU/FRI can be near 40 F.

### Wind/Clouds:

- ✓ Today will be the last day for extended periods of sunshine, with clouds starting to build shortly after sunset.
- ✓ Given the active period of shots of rain/wintry precipitation, skies over the next 5 days will be mostly cloudy to overcast
- ✓ Strongest gusts of around 25 - 30 mph will be possible during the AM hours and early afternoon on Monday. Outside of this, gusts will seldom exceed 20 mph.
