## Rainfall totals through SAT AM

## NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

### Precipitation:

- ✓ **THU:** Rain will continue through the overnight tonight before ending FRI AM. Rainfall totals with this system of near 0.4 - 0.8" is expected.
- ✓ **FRI:** Light rain showers will be exiting around 4 - 6 AM Friday. Additional light moisture will be possible later in the day. Lower confidence on light moisture ETA after the "main wave" but will need to watch after 10 AM. Better chances (30 - 40%) in the 2 PM - 9 PM window. Accumulations will be minimal (likely less than 0.1"). Fog/ drizzle once again cannot be ruled out FRI night into SAT AM.
- ✓ **SAT/SUN:** Most of SAT/ SUN are expected to be dry with only very low-end risks for drizzle. A system is expected to miss east where the bulk of the precipitation will be.
- ✓ **MON/ TUE:** Data is picking up on a weak quick moving system to move through MON/ TUE. Rainfall amounts look minor but will offer up additional chances of moisture, nonetheless. Timing would be late Monday night into TUE at this distance.

### Temperatures:

- ✓ A gradual warmer trend is expected into next week as we move out of the recent cold snap.

### Wind/Clouds:

- ✓ Additional rounds of fog will be possible through SAT AM.
- ✓ Clouds will be plentiful through the weekend.
- ✓ More peak will be possible into early next week. However, with incoming weak system, an increase in clouds is still expected.
