8:15 AM Weather Forecast

## Hour by Hour Forecast:

## Current Weather Alerts:

None

### Temperatures:

- ✓ Low clouds/ fog will keep temperatures rather steady today into around 37 F.

### Wind/Clouds:

- ✓ Light winds expected out of the north today. No disagreements with image to the left in regard to this. Clouds/ fog will be persistent features today.
- ✓ 6 PM through the AM hours of SAT will be the best potential to see fog mix back in. At times, fog can be dense.

## FORECAST NOTES

### Today's Precipitation Chances:

Pockets of VERY light rain showers to drizzle will be expected through the day today. Best potential for this will be in the 2 PM - 9 PM window but light pockets will be possible outside of that.

### Icing concerns?

Ground should be too warm for any icing concerns.

### Dew/Frost:

Light drizzle/ wet surfaces expected today/ this evening into SAT AM.

## Rainfall totals through SAT AM

## NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

### Precipitation:

- ✓ **FRI:** Light moisture will be possible at any one point today, with the best opportunity in the 2 PM - 9 PM window. Amounts should be about 0.1" or less.
- ✓ **SAT:** Drizzle risks continue to remain on Saturday. Confidence is lower on exact coverage / timing. However, enough low-level moisture is present combined with wind flow off the lake to keep this at play at any point. Drizzle can mix in with fog at times as well.
- ✓ **SUN:** Drizzle risks/ fog risks can continue through SUN AM. SUN PM is expected to be dry.
- ✓ **MON/ TUE:** Data is picking up on a weak quick moving system to move through MON/ TUE. Rainfall amounts look minor but will offer up additional chances of moisture, nonetheless. Timing would be late Monday night into TUE at this distance.
- ✓ **WED:** Most of WED should be dry. However, some lingering pockets of drizzle cannot be ruled out in the AM.

### Temperatures:

- ✓ A gradual warmer trend is expected into next week as we move out of the recent cold snap.
- ✓ High temperatures into the upper 30's F to lower 40's F are expected.

### Wind/Clouds:

- ✓ Additional rounds of fog will be possible through SAT AM, especially after 6 PM tonight.
- ✓ Fog threats can linger though SAT into SUN AM as well.
- ✓ Clouds will be plentiful through the weekend.
- ✓ More peaks of sun will be possible into early next week. However, with incoming weak system, an increase in clouds is still expected.
