7:45 AM Weather Forecast

## Hour by Hour Forecast:

## Current Weather Alerts:

All Clear

### Temperatures:

- ✓ High temperatures today expected to reach the upper 40s F.

### Wind/Clouds:

- ✓ Expecting skies to remain mostly cloudy today with an occasional peek of sunshine.
- ✓ Winds today will remain primarily out of the south at 5 - 10 MPH with gusts of 10 - 15 MPH. From 12 - 5 PM-CT, gusts will increase to 15 - 20 MPH.

## FORECAST NOTES

### Today's Precipitation Chances:

Expecting dry conditions throughout much of the day today outside of a low end risk for a pocket of drizzle between 2 - 4 PM CT.

### Rainfall Totals / Icing concerns?

Favoring any light drizzle moving through this afternoon to produce trace amounts. Temperatures will remain above freezing, meaning there is not a concern for ice.

### Dew/Frost:

Although cloud cover may be a limiting factor, dew on grass will be possible Thursday AM. Confidence sits at a 3/5.

## NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

### Precipitation:

- ✓ **THU:** The pattern starts to turn a little more active. THU PM looks to be the main opportunity for rain showers, although showers can arrive as early as noon. A few rumbles of thunder cannot be ruled out in the late afternoon
- ✓ **FRI-SAT:** Light Rain showers/stray thunderstorm look to be possible on Friday, especially the AM. The afternoon does look to dry out on Friday. Into Sat AM a very low-end flurry chance cannot be ruled out
- ✓ **SUN-TUE:** Very low confidence exists into the late weekend into early next week. Several low-pressure systems will be at play. However, exact timing, track, etc. remain very questionable at this distance. An opportunity for rain/ snow will be possible

### Temperatures:

- ✓ Temperatures will be on the uptick into the weekend as temperatures into the 50's F will be possible later this week. Very mild for this time of the year
- ✓ Temperatures will start to moderate into early next week behind a cold front as we work into a more active period

### Wind/Clouds:

- ✓ Clouds will likely be on the increase heading into late week/ early weekend. While a few peaks of sun will be possible at times, there will likely be more cloud cover to contend with. One window for some sun to peak through will be behind the Friday cold front for the PM hours
- ✓ The potential for wind gusts near 30 – 35 MPH will be possible THU PM → SAT AM. These gusts will primarily be associated with the showers and storms late week. Outside of that, we currently do not see anything overly problematic concerning winds.
