7:50 AM Weather Forecast

Hour by Hour Forecast:

Current Weather Alerts:

All Clear

Temperatures:

- ✓ High temperatures can overachieve vs the graph to the left. High temperatures near 63 F will be possible.

Wind/Clouds:

- ✓ Partly cloudy skies expected for today but plenty of peaks of sunshine are expected.
- ✓ SW winds around 10 - 15 MPH sustained are expected this afternoon with gusts near 25 MPH at times towards 12 PM. Winds will gradually wane into the overnight and can become more variable as well.

FORECAST NOTES

Today's Precipitation Chances:

Precipitation is not expected today for most of today will need to watch into the evening around 10 PM for a nonzero risk. Overall, rain chances tonight through tomorrow AM will be determined by where a front sets up. Currently favoring it to set up to the south (more info on the next slide).

Snow totals /Icing concerns?

No concerns regarding icing or snow

Dew/Frost:

Outside of low-end rain chances tomorrow AM, a risk for dew exists as winds calm relatively higher dew points. Limiting factor are clouds which may limit how much surfaces can cool. Overall, would be dew risk around 30%.

NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

Precipitation:

- ✓ **WED:** Rain this AM is expected to stay north and will need to watch for a low-end risk this evening.
- ✓ **THU:** Confidence remains lower regarding rain activity tomorrow. A low-pressure system will pass well to the south. However, a front on its northern extent will at least be close to the Chicago area. Chances will be on the increase after midnight tonight through the AM hours of tomorrow. Current thinking is that from 5 AM - 10 AM is the best window of opportunity. However, this front is anticipated to mainly stay to the south keeping chances/ totals low (0.03 - 0.1"). There does exist more northerly / heavier solutions for tomorrow morning - these solutions are not favored at this time.
- ✓ **FRI:** Will need Friday afternoon/ evening for some snow that can work into the area. Any snow would likely be light with a low-end risk of a coating of snow on pavement. Recent warmer weather will be a great limiting factor regarding pavement impacts.
- ✓ **SAT:** Timing would need nailed down, but again potential for some flurries mainly prior to 8 AM
- ✓ **SUN - WED:** Lets watch early next week (TUE AM through WED) which could offer up some heavy rain and severe weather opportunities. Confidence is low on the exact specifics but something to keep in mind. Snow could follow this system.

Temperatures:

- ✓ Overall temperatures stay quite mild with the coldest temperatures SAT AM after a brief cold front.
- ✓ Temperatures will really spike next TUE out ahead of a system where temperatures can get into the 60's F.

Wind/Clouds:

- ✓ Cloudy conditions are expected on THU with more sunshine working into picture at times on FRI.
- ✓ More sunshine expected into the weekend with an increase of cloud cover into next week with an approaching system.
- ✓ Winds will also be on the increase on TUE - WED of next week. Outside of stronger storm risks, "general" winds will be elevated as well.
