7:50 AM Weather Forecast

## Hour by Hour Forecast:

## Current Weather Alerts:

All Clear

### Temperatures:

- ✓ As clouds clear out, high temperatures will start to spike up to near 50 F today.

### Wind/Clouds:

- ✓ Clouds are expected to scour out through the AM into the early PM with plenty of sunshine the back half of the day.
- ✓ Mostly northerly winds expected for today with a shift more westerly/ northwesterly around 5 - 8 PM. The chart to the left gives a good idea of magnitude.

## FORECAST NOTES

### Today's Precipitation Chances:

Current thinking is that the rest of today will be dry as a front drops to the SE. Overall, radar observations support this idea as well.

### Snow totals /Icing concerns?

No concerns regarding icing or snow

### Dew/Frost:

Frost/ dew conditions are quite borderline getting into tomorrow AM. Current thinking is that winds will be elevated enough and not enough low-level moisture for frost/ dew to form.

## Next 7 Day Rainfall Totals

## NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

### Precipitation:

- ✓ **THU:** Fairly high confidence in dry conditions as a front continues to sag to the south.
- ✓ **FRI:** Will need Friday afternoon/ evening for some snow that can work into the area. Any snow would likely be light with a low-end risk of a coating of snow on pavement. Recent warmer weather will be a great limiting factor regarding pavement impacts. Chances will be on the increase into the evening as temperatures drop and light flurries linger.
- ✓ **SAT:** Timing would need nailed down, but again potential for some flurries mainly prior to 8 AM. Lake-effect is a wild card factor here - regardless - a light coating of snow will continue to be possible on pavement. Back half of the day should be dry.
- ✓ **SUN - WED:** We continue to monitor for a more active weather pattern into the middle part of next week. At least minor chances are in the cards for MON and through the first half of TUE. However, TUE PM into WED offers up more widespread storm risks with the potential for severe weather and heavy rain. Snow may mix in late WED. Overall, details on the specifics at this distance are low.

### Temperatures:

- ✓ Coldest temperatures expected into SAT AM before temperatures ramp back up into next week.
- ✓ Temperatures will really spike next TUE out ahead of a system where temperatures can get into the 60's F.

### Wind/Clouds:

- ✓ The most sun will be found SAT PM into the first half of MON. Clouds will likely be on the uptick ahead of an approaching system.
- ✓ TUE - THU will offer up gusty conditions in general outside of strong-to-severe storms. Gusts of 30 - 40 MPH will be possible (again, stronger gusts under the strongest storms that form).
