6:35 AM Weather Forecast

## Hour by Hour Forecast:

## Current Weather Alerts:

No Active Alerts (All Clear)

### Temperatures:

- ✓ High Temperatures today will be unseasonably warm in the mid 60s F. Application again would run the risk of being too cool with the high temp as values ~66 F are possible

### Wind/Clouds:

- ✓ Slightly more sun than clouds favored for today
- ✓ Winds will be on the increase throughout today, with gusts of 18 - 23 mph by 12 PM then 23 - 38 mph in the early afternoon from 2 - 6 PM Sustained winds will veer slightly from the ESE to S at 10 - 15 mph mainly in the early PM

## FORECAST NOTES

### Today's Precipitation Chances:

Rain is not expected for the majority of the day. Watching a weak warm front for isolated shower and storm development towards 9 PM through roughly 3 AM. Main threat under storm development would be small hail/iso lightning

### Rain Totals:

Low confidence exists on rain totals, as these storms can simply fail to initialize. With that being said, any strike of a cell can produce rainfall totals of 0.2 - 0.4", but there can be a complete whiff on storms with no precipitation

### Dew/Frost:

Too mild to see frost. There can be some dew formation if rainfall is not observed as there is not complete cloud cover during the overnight. Any dew formation would be light

## Rainfall totals Next 7 Days

## NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

### Precipitation:

- ✓ **TUE:** Exiting isolated storms leave near 3 -4 AM CT. From there watching the next window of potential for severe storms from 1 -7 PM. All modes will be possible with hail, iso tornado and strong winds. The better corridor does look to be east of the area, but these threats will need to be considered. From a rain totals perspective, the application is handling well
- ✓ **WED:** Would need to get timing squared away, but scattered showers/storms from TUE PM can transition to a brief period of snow showers early AM near 2 - 7 AM. Potential for ~0.25 to locally 0.5" from the sky cannot be ruled out. After precip exits, the PM will be dry
- ✓ **THU:** Favoring dry conditions; abundant high pressure follows behind the storm system
- ✓ **FRI:** A dry, sunny day favored
- ✓ **SAT:** Dry conditions continue with high pressure

### Temperatures:

- ✓ "Roller coaster" pattern ahead with temperatures. A brief cooldown will then follow on Wed/Thu behind a cold front, bringing temperatures into the upper 30s to lower 40s F
- ✓ Temps can go from a 40-degree difference from TUE PM - WED AM.
- ✓ Temperatures warm again into next weekend

### Wind/Clouds:

- ✓ Cloudy days arrive from TUE - WED AM with precipitation chances. Rapid clearing of skies follows in the PM on WED, allowing for abundant sunshine through SAT.
- ✓ Gusts of 30 - 40 mph possible with PM storms on Tuesday with some locally higher (50 - 55 MPH) under strongest storms (low-end risk)
- ✓ Behind storm threats with the cold front, winds remain gusty WED at 30 -40 mph.
- ✓ THU AM winds look calm with another potential for 25 -30 mph gusts in the PM.
