Rainfall Totals Through SUN PM

NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

Precipitation:

- ✓ **WED:** A dry day is expected on WED.
- ✓ **THU:** Most of THU is expected to be dry with increasing chances towards midnight getting into FRI AM.
- ✓ **FRI:** Rain/ Storm chances will be possible throughout the day on FRI.
- ✓ **SAT:** Chances will be dependent on exact track/ speed of a low-pressure system into the weekend. SAT runs the risk of trending dry as the system on Friday progresses east. At this time however rain is favored with a risk of back side flurries.
- ✓ **SUN:** Models are trying to pick up on the risk for a few back side flurries very early Sunday AM behind the main low pressure system, however favoring the day to be dry outside of that.

Temperatures:

- ✓ Temperatures will remain in the upper 30s to the low 40s F throughout the week. These temperatures overall will remain fairly mild to above normal for this time of year.

Wind/Clouds:

- ✓ Slightly more sunshine is expected WED / THU.
- ✓ Skies will remain mostly cloudy at the week due to a low pressure system pushing in.
- ✓ Watching FRI/ SAT for the potential for stronger winds near 40 MPH. Low confidence in this at this distance and will depend on the track/ intensity of a low-pressure system.
