Hour by Hour Forecast:

FORECAST NOTES

Current Weather Alerts:

None/ All Clear

Temperatures:

- ✓ High temperatures today will top out near 40 F. Slightly below normal temperatures linger today.

Wind/Clouds:

- ✓ Winds will continue to be slightly elevated today. While not as strong as yesterday, sustained winds from the NW at 10 - 15 mph with gusts of up to 25 mph through 12 PM, then a few gusts up to 20 mph from 12 PM to sunset.
- ✓ A few passing clouds in the AM will yield mostly sunny skies in the afternoon

Today's Precipitation Chances:

Dry conditions anticipated for today

Rain + Snow Totals:

N/A

Dew/Frost:

A very dry airmass again will make frost or dew formation tomorrow highly unlikely. RH values in the mid 50s expected.

NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

- ✓ **THU:** Favoring a dry day for Thu. A PM stray drizzle chance near 4 PM is possible but not likely. (10% chance)
- ✓ **FRI:** Best timing for the clipper system for now would enter near 4 AM and from 4 - 9 AM this would be the best potential for 0.5 - 1" of snow. Beyond 9 AM confidence is still low, but the better accumulating snow corridor stays to the north, with precip exiting near 5 PM.
- ✓ **SAT:** Aside from a potential stray AM flurry prior to 8 AM, the day is looking dry.
- ✓ **SUN:** Low confidence present, but it is likely the AM remains dry with only a 10% chance for a stray flurry. Placement of a warm front can cause stray light precipitation in the afternoon as well. The risk is simply this day remains dry.
- ✓ **MON:** The AM would risk trending drier as well. There will be notable heavy rain moving in, but latest data suggests this will not arrive until very late PM.

Temperatures:

- ✓ A moderating pattern ahead.
- ✓ Coolest days last through Thu with a warmup on Fri. The cold front will cool temps on Saturday with another warmup to start next week ahead of the next storm.

Wind/Clouds:

- ✓ Clouds will enter the picture into Thursday AM, transitioning into a cloudier pattern into the weekend
- ✓ Some peaks of sunshine can occur in between storm systems, mainly SAT PM.
- ✓ Wind gusts will not be much of a factor except rolling forward in the next 2 days.
- ✓ Minor mention would be to watch for some gusts with the cold front FRI/PM SAT AM for 30 - 40 mph gusts.
