7:40 AM CT Weather Forecast

Hour by Hour Forecast:

Current Weather Alerts:

All Clear

Temperatures:

- ✓ High temperatures today will reach near the mid 50s F at 54 F
- ✓ Lows will take a dip to near 30 F for tomorrow AM.

Wind/Clouds:

- ✓ Overcast skies will be the theme leading up to the exiting rain chances through about 3 PM CT. Skies will remain mostly cloudy into the afternoon, but a few rays of sunshine can get through the clouds
- ✓ Winds remain quite elevated at 30 -40 mph today. T-storms can aid in locally higher gusts to 45 mph.
- ✓ Sustained winds will be from the S in the AM, shifting from the SW in the early PM at 15 -20 mph.

FORECAST NOTES

Today's Precipitation Chances:

A few chances of isolated drizzle possible in the AM, but best timing for general thunderstorms lasts from 11 AM -1:30 PM. A few pockets of drizzle can linger through 3 PM CT before conditions dry out for the afternoon. We would need to watch for some backside flurry chances during the overnight, starting at 12 AM and lasting through 10 AM CT at the latest.

Rain + Snow Totals:

Rainfall totals of 0.1 - 0.2" favored with thunderstorm activity. A few locally higher totals of up to 0.3" cannot be ruled out under a locally heavier cell. Snowfall totals tomorrow AM would not yield any accumulation, as wind gusts will remain too elevated to see it stick

Dew/Frost:

Dew and frost is not a concern tomorrow with elevated wind gusts. A very low-end risk for standing water shielded from NW winds can see some iso. slick spots. This would be a 2/10 risk.

NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

- ✓ **WED:** Backside flurries can hang around through about 10 AM tomorrow morning. Partial clearing follows flurries with partly cloudy/dry conditions in the PM
- ✓ **THU:** Favoring dry conditions. A 10% very slight shower chance would exist in the late PM post 6 PM.
- ✓ **FRI:** Likely most of the day is dry. Like THU, isolated chances would be possible near 6 PM into the evening.
- ✓ **SAT:** Placement would need to be nailed down, but rain chances are at play in the early AM with a weak low-pressure system. Rainfall totals can be increased slightly more than app suggests near 0.25" as a risk.
- ✓ **SUN:** Scattered shower and storm chances possible, but this will depend on the placement of the warm front overall. Chances can trend slightly higher here to near 40-60% range, especially in the PM.

Temperatures:

- ✓ Steadier pattern of temps settles in outside of a brief cooldown on WED
- ✓ THU/FRI/SAT/SUN hold steady temps in the low to mid 50s F
- ✓ Low temperatures will lift above freezing by Friday, but overnight lows can be chilly in upper 20s to low 30s F until then.

Wind/Clouds:

- ✓ Wind gusts greatly subside getting into the late AM WED. With a few gusts in the 18 - 23 mph range (calming in PM)
- ✓ Thu/Fri would hold wind gusts under 20 mph (not much of a concern)
- ✓ Pending placement of scattered precip SAT/SUN a few gusts in the 20-30 mph are possible
- ✓ WED PM - FRI PM will hold a blend of clouds and sun
- ✓ SAT/SUN: Mostly cloudy skies with only a few breaks of some sunshine
