8:00 AM CT Weather Forecast

Hour by Hour Forecast:

FORECAST NOTES

Current Weather Alerts:

All Clear

Temperatures:

- ✓ High Temperatures are expected to get into the upper 40's F / Low 50's F today.
- ✓ Lows will take a dip to the low 40's F tomorrow AM.

Wind/Clouds:

- ✓ Clouds this AM are continuing to build in. Expecting by 12 PM, partly sunny skies will fill in with cloud cover to become overcast.
- ✓ Winds out of the ENE will remain pretty calm at 2 - 7 MPH through much of today, occasionally shifting a bit more out of the ESE. By 9 PM CT, winds will gradually increase to 5 - 10 MPH with gusts up to 18 MPH at times.

Today's Precipitation Chances:

Continue to favor dry conditions for the majority of the day. Then right around 7 - 8 PM, scattered light to moderate rain showers will begin to creep into the area, gradually increasing in coverage and intensity through the evening. By 11 PM- 12 AM CT, showers will be moderate to at times heavy and move widespread over Chicago.

Rain + Snow Totals:

Rainfall totals by midnight will sit around trace to 0.1". By sunrise, rainfall totals will be up near 0.3 - 0.5" with rain chances then continuing for Saturday.

Dew/Frost:

Continuous rainfall favored overnight resulting in wet surfaces in the AM.

Rainfall Totals Through THU AM

NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

- ✓ **SAT:** Rain should start to exit in the 5 - 7 AM timeframe. Rainfall totals through SAT AM around 0.3" - 0.5" cannot be ruled out. Due to coverage/ uncertainty on placement, confidence in rainfall totals is low. Data has trended mostly east / south on SAT PM. Overall favoring dry the back half of the day SAT.
- ✓ **SUN:** Confidence remains low on the specifics on Sunday and on, but showers/ storms will be possible. SUN afternoon would need to be monitored for activity pending on where a warm front sets up. Better threat exists into overnight SUN into MON AM when a warm front will be in closer proximity.
- ✓ **MON:** Waves of rain will be possible on Monday with the potential for heavy rain and perhaps some stronger storms. Rain chances look consistent through the day at this distance.
- ✓ **TUE:** Lingering rain seems likely on TUE, especially early TUE. Heaviest of the rain should have exited at this point, however. Rainfall totals through TUE could easily amount to 1" - 2"
- ✓ **WED:** Anticipating some scattered rain showers to be around for much of the day as the system exits to the west. Low end risk for some flurries to mix in on the back side of this activity.

Temperatures:

- ✓ An overall seasonable temperature outlook is expected over the next few days.
- ✓ Temperatures over the weekend can be highly volatile pending on where a warm front sets up.

Wind/Clouds:

- ✓ Winds will pick up a tad into the weekend/ early next week as a system approaches/ departs the CHI area. In addition, MON storms will need to be monitored for strong to severe potential.
- ✓ Cloud cover will have a more notable increase this weekend with a frontal boundary around the area. More sunshine expected through FRI.
