8:00 AM CT Weather Forecast

Hour by Hour Forecast:

Current Weather Alerts:

All Clear

Temperatures:

- ✓ High Temperatures will reach the mid 50s F near 57 F today
- ✓ Lows will take a dip into the low 40s F at 42 F Sunday AM.

Wind/Clouds:

- ✓ Cloud cover today will remain mostly cloudy rather consistently
- ✓ Wind gusts of 13 - 18 mph will be possible, mainly from 2 - 8 PM CT during peak daytime heating hours
- ✓ Sustained winds will remain from the N to NNW at about 9 - 14 mph

FORECAST NOTES

Today's Precipitation Chances:

Outside of a few lingering pockets of drizzle/low clouds during the AM hours today, the afternoon will dry out and feature mostly cloudy skies

Rain + Snow Totals:

Rainfall totals post 8 AM CT today will remain at a trace or less.

Dew/Frost:

While cloud cover will remain high at 70% or greater, wet surfaces/dew formation will be possible with wet surfaces tomorrow AM as there is plenty of low-level saturation with recent rains and near-calm winds.

Rainfall Totals Through THU AM

NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

- ✓ **SUN:** As reflected in the 10 day, the AM hours will likely remain dry with the best timing for storms to lift north near 4 PM. 7 PM into early Monday AM can feature scattered to widespread periods of showers/storms
- ✓ **MON:** Waves of rain will be likely on Monday with the potential for heavy rain and perhaps some stronger storms. Rain chances look consistent through the day at this distance. The heaviest corridors would be at risk of sliding to the S of the area, but rainfall totals of 0.5 - 1.0" are possible.
- ✓ **TUE:** Lingering rain seems likely on TUE, especially early TUE. Heaviest of the rain should have exited at this point, however (for the most part exiting by 12 PM) Rainfall totals through TUE could easily amount to 1" - 2"
- ✓ **WED:** Anticipating some scattered rain showers to be around for much of the day as the system exits to the west. Low end risk for some flurries to mix in on the back side of this activity (flurries in the AM)
- ✓ **THU:** Finally looking like a dry day on Thursday

Temperatures:

- ✓ An overall seasonable to slightly below normal temperature outlook is expected over the next few days.
- ✓ Temperatures over next weekend (4/6 - 4/8) can be at risk of trending warmer ahead of another developing storm system

Wind/Clouds:

- ✓ Winds will start to increase with the arrival of scattered showers/storms late SUN PM into MON AM at 25 - 35 mph. Stronger storms can cause severe wind gusts to 50 mph, but timing these windows are still low confidence
- ✓ Winds would remain more elevated at least through WED PM with the backside NW winds behind waves of precipitation (gusts of 30 - 40 mph possible WED)
- ✓ It will be hard to see persistent sunshine over the next 5 days with waves of precipitation. Cloudy to mostly cloudy skies hang around through WED AM
