7:50 AM CT Weather Forecast

## Hour by Hour Forecast:

## FORECAST NOTES

## Current Weather Alerts:

All Clear

### Temperatures:

- ✓ High Temperatures will reach the low to mid 40s F near 44 F
- ✓ Lows will hold near steady in the lower 40s F near 41 F.

### Wind/Clouds:

- ✓ Cloud cover today will remain mostly cloudy. If there is a period of some sunshine working in with partly to mostly cloudy skies, it would be from noon to 4 PM.
- ✓ Winds will be near calm in the AM, picking up to a light NE breeze at 8 - 13 mph after 2 PM
- ✓ Gusts of 12 - 17 mph are possible starting at 2 PM with a slight uptick to 15 - 20 mph after 7 PM

### Today's Precipitation Chances:

Dry conditions are favored for the majority of the day. Would need to watch for increasing rain chances starting near 5 PM, with a high probability of rain to work through by 7 PM. General thunderstorms can start to work in near 10 PM - 2 AM as the best window for scattered coverage. Post 2 AM, brief dry period can occur from 2 AM - 8 AM but note there can still be light drizzle over this window. Another wave of thunderstorms can start to work in thereafter towards 9-10 AM, but the risk would be for these to be delayed slightly longer near 12 PM.

### Rain + Snow Totals:

Through 8 AM tomorrow, anywhere from about 0.4 - 0.8" of rainfall are at play. The risk would be to lean on the lower side of this solution pending better T-storm coverage slides more south

### Dew/Frost:

Surfaces will be wet in the AM from rainfall (N/A)

## Rainfall Totals Through THU PM

## NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

- ✓ **MON:** Lighter rain showers will be possible in the late AM mainly from about 10 AM - 2 PM. Scattered thunderstorms then enter near 2 PM - 8 PM. This window can see some locally stronger storms, but latest trends place heavier coverage to the S of the area. Light rain showers can follow post 8 PM. Overall rainfall totals of 0.5 - 1.0" still at play with the risk to lean near the 0.5 - 0.75" realm
- ✓ **TUE:** Lingering rain seems likely on TUE, especially early TUE. Heaviest of the rain should have exited at this point, however (for the most part exiting by 2 PM) Rainfall totals through TUE can still be around 0.5 - 1.0"
- ✓ **WED:** Confidence remains below normal, but light drizzle/flurries enhanced by the lake are possible in the AM. Light drizzle can still linger into the PM hours as well. Regardless, this day will be gloomy with low clouds/drizzle
- ✓ **THU:** Finally looking like a dry day on Thursday, an isolated AM flurry is not out of question, but not favored at this distance.
- ✓ **FRI:** Favoring dry conditions as high pressure settles in

### Temperatures:

- ✓ An overall seasonable to slightly below normal temperature outlook is expected over the next few days. Constant days of rain will help keep high temps near steady in the mid 40s.
- ✓ Temperatures over next weekend (4/6 - 4/8) can be at risk of trending warmer ahead of another developing storm system

### Wind/Clouds:

- ✓ Wind gusts of 20 - 25 mph will be consistent over the short term. Under any T-storm activity a few stronger gusts to 45 mph are possible (MON late PM/TUE early AM)
- ✓ WED: Potential for 30 - 40 mph gusts as winds come off from the lake
- ✓ It will be hard to see persistent sunshine through THU AM with waves of precipitation. Cloudy to mostly cloudy skies hang around through WED AM
- ✓ Clearing can occur Late THU AM into the PM, with sunshine returning FRI.
