7:00 AM CT Weather Forecast

Hour by Hour Forecast:

FORECAST NOTES

Current Weather Alerts:

All Clear

Temperatures:

- ✓ High Temperatures will reach the low 40s F at 42 F.
- ✓ Lows WED AM will drop back into the mid 30s F towards 35 F.

Wind/Clouds:

- ✓ Overcast skies expected today outside of time where it is not raining.
- ✓ Wind gusts of 25 - 30 mph favored for this afternoon, a few localized gusts to 35 mph are possible after 6 PM
- ✓ Winds will shift in direction today as the core of the low will swing around into the CHI area.
- ✓ AM winds start from the ENE, shifting from the NW by 9 PM. The shift will occur from 2 - 6 PM. Sustained speeds of 12 - 17 mph favored.

Today's Precipitation Chances:

9AM - 1 PM will be a window with hit/miss coverage of light showers/drizzle. The best timing for showers and thunderstorms today will be from 1:30 PM - 5 PM (best window about 2 - 4 PM). After 5 PM chances will start to slowly diminish to a light drizzle in the afternoon/evening. After 9 PM favoring overcast and cloudy skies. Majority of the rainfall will occur leading up to 5 PM, where about 0.3 - 0.6" of rainfall are at play (locally up to 0.75" not out of question). Post 5 PM through 9 PM, rainfall totals are not favored to exceed 0.1" over a 4-hour window (most likely only a few to several hundredths of an inch)

Rain + Snow Totals:

Favoring around 0.3 - 0.6" of rainfall today (locally up to 0.75" possible). Application is at risk of leaning too aggressive with rain totals

Dew/Frost:

Surfaces will be wet in the AM from rainfall (N/A)

Rainfall Totals Through THU PM

NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

- ✓ **WED:** Flurries/Snow Showers can enter the picture as early as 4 AM and be about throughout the AM hours. Hit/miss rain/snow showers can continue into the PM, but they would be tapering the further the PM wears on. Snow accumulation is not favored due to air temperatures struggling to dip below 35 F.
- ✓ **THU:** Isolated rain/snow showers will continue in a light fashion in the AM, induced by the lake. After 12 PM light drizzle can still linger into the PM and precipitation chances have trended slightly higher.
- ✓ **FRI:** Favoring dry conditions as high pressure settles in
- ✓ **SAT:** Dry conditions continue into Saturday.
- ✓ **SUN:** Chance for some isolated rain showers in the late AM to early PM. Confidence is low this far out, but there is the risk that moisture struggles to advance east.

Temperatures:

- ✓ Slightly below normal temperatures take hold so long as we're dealing with days of precipitation.
- ✓ Temperatures then begin to warm up beyond Thursday with a gradual warming trend. The start of next week can see temps in the low 60s F.

Wind/Clouds:

- ✓ Wind gusts of 20 - 25 mph will be consistent over the short term. Under any T-storm activity a few stronger gusts to 45 mph are possible
- ✓ WED/THU: Potential for 25 - 35 mph gusts as winds come off from the lake; locally up to 40 mph possible. Winds have backed off a touch.
- ✓ It will be hard to see persistent sunshine through THU PM with waves of precipitation. Cloudy to overcast skies hang around through THU AM with some clearing late in the PM.
- ✓ FRI/SAT would be the best opportunities to see some sun
