8:05 AM CT Weather Forecast

Hour by Hour Forecast:

Current Weather Alerts:

All Clear

Temperatures:

- ✓ High Temperatures will reach the low to mid 40s F near 44 F
- ✓ Lows will hold near steady in the lower 40s F near 41 F.

Wind/Clouds:

- ✓ Cloud cover today will remain mostly cloudy. To cloudy. Any rare breaks in the clouds would be prior to 1 PM today.
- ✓ Wind gusts of 25 - 30 mph possible during the AM hours. With thunderstorm activity, gusts in isolated cases can reach up to 45 mph. Severe gusts are not favored.
- ✓ Sustained winds will be from the NW at 12 - 17 mph, increasing slightly to 16 - 21 mph by 2 PM

FORECAST NOTES

Today's Precipitation Chances:

Dry conditions are favored leading up until 1 PM, then some isolated rain showers will be at play from 1 - 2 PM. Rainfall amounts over this hour would be light at a few hundredths of an inch. An increase in chances arrives from 2:30 - 4 PM for scattered rain showers, and then from about 4-6 PM there can be brief intermission of isolated coverage where chances drop back slightly to 40%. A second/main wave would be entering near 5:30/6 PM with showers/storms lasting rather consistently into the overnight. Afternoon rainfall totals from 2 - 6 PM are estimated at about 0.25 - 0.40" while the evening through TUE AM (8 AM CT) can see an additional 0.3 - 0.6"

Rain + Snow Totals:

2 - 6 PM: 0.25 - 0.4" from 6 PM - 8 AM CT TUE: 0.3 - 0.6" → totals of around 0.6 - 1.0". Locally heavier totals near 1.25" possible, but better opportunities for heavier storms will be a few counties to the south.

Dew/Frost:

Surfaces will be wet in the AM from rainfall (N/A)

Rainfall Totals Through THU PM

NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

- ✓ **TUE:** Lingering rain seems likely on TUE, especially early TUE. The best dry window would occur from 7 AM - 1 PM before another pulses works in during the early PM. Would need to watch low placement, but by 8 PM coverage would likely turn into a light drizzle.
- ✓ **WED:** Confidence remains below normal, but light drizzle/flurries enhanced by the lake are possible in the AM. Light drizzle can still linger into the PM hours as well. Regardless, this day will be gloomy with low clouds/drizzle. Pavement impacts would not be likely with combination of rain/snow showers in the AM, and at this distance snow totals are too high in the application.
- ✓ **THU:** Isolated rain/snow showers will continue in a light fashion in the AM, induced by the lake. After 12 PM light drizzle can still linger into the PM and precipitation chances have trended slightly higher.
- ✓ **FRI:** Favoring dry conditions as high pressure settles in
- ✓ **SAT:** Dry conditions continue into Saturday.

Temperatures:

- ✓ Slightly below normal temperatures take hold so long as we're dealing with days of precipitation.
- ✓ Temperatures then begin to warm up beyond Thursday with a gradual warming trend. The start of next week can see temps in the low 60s F.

Wind/Clouds:

- ✓ Wind gusts of 20 - 25 mph will be consistent over the short term. Under any T-storm activity a few stronger gusts to 45 mph are possible (TUE early AM)
- ✓ WED/THU: Potential for 30 - 40 mph gusts as winds come off from the lake; locally up to 45 mph possible
- ✓ It will be hard to see persistent sunshine through THU AM with waves of precipitation. Cloudy to overcast skies hang around through WED AM
- ✓ Clearing can occur early THU PM into the late PM, with sunshine returning FRI.
