## Rainfall Totals Through THU PM

## NEXT 5 DAYS: IMPORTANT FORECAST NOTES:

- ✓ **MON:** Favoring a dry day, It would be near 4 - 7 PM for a very low end 10% isolated shower, but not favoring rain.
- ✓ **TUE:** A return to an active day. Potential wave of stronger T-storms (severe possible) toward/prior to sunrise. Main wave would push through near 10 AM, with some dry time possible in the early PM. Mid afternoon can see some additional scattered storms
- ✓ **WED:** Majority of this day can be dry, (likely AM through 2 PM best dry time). Another wave enters from the SW in the late PM, but the risk is for this to trend more into early THU AM. This is overall a lower confidence day for timing of storms. Severe in nature is possible
- ✓ **THU:** Looking like a rainy AM followed by sporadic additional moisture chances in the late evening.
- ✓ **FRI:** A few sporadic rain chances with dry time far exceeding wet

### Temperatures:

- ✓ Temperatures running a tad cooler through tomorrow in the mid 60s F
- ✓ Quick return to a milder pattern of mid 70s works through TUE/WED with storm induced warmth
- ✓ Temps again cool slightly into THU/FRI behind WED storm system

### Clouds:

- ✓ MON: sunnier across the AM with partly cloudy afternoon skies
- ✓ TUE/WED: 8 AM - 4 PM would hold the best mix of clouds and sun outside of late PM afternoon rain chances
- ✓ THU: some sun can work in between rain chances

### Winds:

- ✓ Nothing extreme noted on winds for tomorrow
- ✓ TUE AM - WED PM would be a window to watch for potential strong to severe gusts under storms. General T-storms can produce 40-45 mph gusts TUE/WED.
- ✓ Thu: AM storms can have a few 30 - 40 mph gusts with the PM remaining elevated at 25 -30 mph gusts
