## IMPORTANT FORECAST NOTES (as of 8:30 AM AT, 5/5/24):

- ✓ Lowest confidence part of the forecast today is from 1 - 6 PM. While there is some energy overhead that can yield light drizzle/stray light shower, the risk is for this to simply remain overcast and dry (this is favored to be dry). Any rain that does try to form will not exceed a few hundredths
- ✓ Better timing will be from coverage into OH (at the time of writing update). This coverage will enter near 6 - 7 PM at the earliest with a better start time near 8 - 9 PM. Totals of around 0.2 - 0.4" are possible
- ✓ High temperatures this PM will reach the mid 70s F near 74 F
- ✓ Winds will essentially be a nonfactor today. Variable directions due to the light nature at less than 7 mph. Even with coverage of rain showers moving in for the PM, gusts will not be much of a factor

## Dew Forecast

- ✓ Dew formation is not favored tomorrow. The environment overall will be saturated overnight from evening rains, so surfaces will remain damp
