## Hazardous Weather Alerts:

All Clear

## IMPORTANT FORECAST NOTES (as of 4:00 PM AT, 5/6/24):

- ✓ Amid a still lower confidence forecast, the likelihood for post 6 PM thunderstorms continues to decrease. 4:45 would be the best early potential for light drizzle to work in, and anything from there through 6:30 PM. From 6:30 - 1 AM coverage will remain quite isolated, however a lighter shower would be possible
- ✓ Rainfall amounts this afternoon through 1 AM across drizzle to light shower threats will likely be at 0.1" or less
- ✓ Low temps tomorrow AM will bottom out into the low 60s F
- ✓ Winds continue to be a nonfactor across the afternoon with a stagnant atmosphere. Variable directions at less than 7 mph.

## Dew Forecast

- ✓ Dew formation is not favored tomorrow. The environment overall will be saturated overnight as the RH remains high, so surfaces will remain damp into the AM
